

Infinite 346

Chapter 346: Reunion, Su Yu Holding Multiple Jobs? Layered Breakthrough? What Kind of Move is This!

However, Su Yu had never seen similar technology until now.

But he had seen Xiao Shengyin's Subspace Delivery, so...

"I wonder if the members of the Transcendent Union have such technology?"

Soon, a week passed, the token fluctuated, and the second gathering arrived as scheduled!

"It's starting!"

Su Yu immediately condensed a Ghost Energy avatar and re-entered the Subspace.

He was very much looking forward to this gathering.

The members of the gathering were all Seven-star Transcendents, either having lived for ages or being leaders of major forces, each with their own opportunities and encounters, surely possessing a lot of advanced technology.

Perhaps there would be something Su Yu wanted.

Especially since Su Yu remembered something.

Back when Tie Long fought with Su Yu, at the critical moment, he mentioned having Galaxy Warrior armor and weapons hidden inside his body to bring out in crucial times and unleash his fighting strength.

But the problem was, such armor and weapons must be quite large, how could they be hidden inside the body?

Perhaps those armors and weapons employed some sort of spatial technology!

Speaking of which, this was the second time Su Yu aimed at Tie Long's armor.

He had previously thought of finding a way to sway Tie Long's armor over to research new blueprints.

The old manager's prosthesis back then provided Su Yu with quite a bit of inspiration.

But the technological content of the old manager's prosthesis could not compare with the armor of a Galaxy Warrior?

That's empire technology! Making Su Yu extremely envious.

But recently he had been too busy, with no opportunity.

This gathering, if there was no news on spatial technology, Su Yu might have to extend his black hand towards Tie Long.

Besides, Tie Long was close to Su Yu, so even if he had to snatch it, it would be convenient.

Of course, Su Yu wouldn't rob; he was currently playing the role of a boss, and playing it very well.

As long as he kept persuading, sooner or later, Tie Long would voluntarily offer up his armor.

Su Yu, with these thoughts swirling in his mind, upon entering the Subspace, recalled that coordinate again, instantly entering the gathering hall.

His terrifying Evil God-like figure descended once more.

At this moment, all the other members were present in the hall.

It seemed they had been waiting here for a while, preparing ahead, and only informed Su Yu last.

Seeing Su Yu's instant arrival, with a brutal aura spreading, everyone couldn't help but look at Xiao Shengyin.

And the old man helplessly rubbed his forehead, "Still useless, can't block it at all..."

Su Yu smiled faintly, and sat down beside the long table.

He noticed that this time the gathering hall was a bit different from the last time, with many complicated patterns carved on the surrounding walls.

It seemed that Xiao Shengyin, over these seven days, had learned some lessons and upgraded the Subspace protection technology hoping Su Yu would enter through the front door once.

However, it was useless, Su Yu came and went as he pleased.

The crowd looked at Su Yu's demonic figure with complicated expressions.

During these seven days, they had worked hard to coordinate with Xiao Shengyin to upgrade the technology, but it was all in vain.

Moreover, everyone noticed that Su Yu's aura seemed stronger than before!

Even his height had increased again, now exceeding three meters.

It turned out that during these days, Su Yu, due to the efforts of the believers in the Radiation Land, had upgraded again.

Reaching level thirty, with his strength rising once more, delving deeper into the realm of Seven-star Transcendents.

The further the level, the harder it gets, requiring more and more experience.

But it didn't matter, as Su Yu's believers would keep spreading the faith, increasing in numbers...

At this moment, due to Su Yu's strength increasing again, his imposing presence was startling.

Although Xiao Shengyin was the president, sitting at the head,

when Su Yu sat down, with his imposing aura dominating, it seemed like he was the master here.

"It's only been a week, and he's already stronger again!"

Everyone was inwardly amazed.

Right now, they were even more convinced that Su Yu must be an ancient awakened powerhouse, gradually regaining his strength step by step.

Otherwise, it would be impossible to explain such a rapid enhancement.

They were all Seven-star powerhouses; to see noticeable strength improvements should at least take years.

Su Yu managed to achieve such great improvements in just one week.

This could only be explained by the awakening of an ancient powerhouse.

As to whether Su Yu was the Soul Emperor or something even older, people were no longer sure.

"The gathering begins."

"Everyone can start trading or exchanging."

Xiao Shengyin calmed his mind a little and announced.

Everyone habitually turned their heads to look at Su Yu.

The last time, Su Yu revealed a world-shattering big secret; would there be any surprising performances this time?

Su Yu really wanted to ask everyone, why are you all looking at me?

Initially, he wanted to find an opportunity to search for spatial compression technology.

But since he was acting as a big boss now, he naturally couldn't directly ask.

He had intended to observe the changes first and listen to other members' exchanges and transactions to gather intelligence.

But these guys kept staring at him, as if they wouldn't speak unless Su Yu spoke.

This left Su Yu feeling helpless.

After waiting for a while, Su Yu could only chuckle lightly and leisurely said:

"Speaking of exchanges, I do have some experience on the Transcendent's path to share with you all."

This statement from Su Yu shocked the others.

What? This old monster wants to share his experience?

Last time, Su Yu revealed the ultimate secret of this planet.

This time, is he going to make another move? What amazing thing will he share?

Would it be too valuable for them to afford?

"Please, Mr. Su Yu, enlighten us; if there's any price to pay, just name it!"

They hastily expressed solemnly.

Su Yu gently shook his head, "No price is needed; it's just a gratuitous sharing of experience."

Chapter 347: Reunion, Su Yu Holds Multiple Careers? Stacking Breakthroughs? What is This Operation!_2

Everyone was taken aback. Free? That's a deal!

But they couldn't be careless, free things often turn out to be the most expensive.

They quickly focused, eager to hear what wisdom Su Yu had to offer.

Su Yu pondered for a moment, deciding to lay the groundwork for what he was about to do.

They only heard Su Yu say slowly, "I see that you seem to focus on only one profession, one path."

"While this is pure, if you struggle to break through, you will be stuck at a certain level, with no progress for a hundred years."

"I, on the other hand, have been trying multiple professions."

"For example, data, mechanics, physical body, and many other areas... I've tried a lot and explored different paths."

"Stacking multiple professions allows continuous power enhancement. In the same realm, you can be incredibly strong and even fight across levels. Moreover, if you continue stacking, one day you will break through the limits."

However, after listening, the others felt as if thunder was rumbling in their ears.

What? Trying multiple professions, stacking endlessly! Breaking through limits?

Is there really such a method?

It sounds reasonable... not really!

On this planet, reaching a seven-star Transcendent profession, is it really that easy to achieve?

Those who reached seven stars did so by happenstance, obtaining relics from major ruling powers of the past.

Moreover, focusing on one profession already requires a tremendous amount of energy. How could they have the time to devote to other professions?

With that time, they might have already made breakthroughs in their main profession.

And different professions might have conflicts. Carelessly stacking them could lead to one's demise!

Their thoughts were indeed reasonable.

Typically, that's how it is; otherwise, everyone would already be juggling multiple jobs.

Su Yu had just been saying things without caring, knowing they would be looking at him, he just said whatever came to mind.

After all, Su Yu had a Profession Panel, upgrading was like eating and drinking, was there really a thing such as profession conflict?

Didn't feel it...

Everyone looked at Su Yu, their eyes conveying one meaning: Are you sure you're not teasing me?

But Su Yu just smiled silently.

Seeing Su Yu like this, everyone suddenly frowned. Could it be that Su Yu wasn't joking but was serious?

It makes sense that such an old monster would have no intention of making such outlandish jokes, right?

So... it's true?

Right!

Last time when Su Yu introduced himself, he said he was proficient in Ghost Energy, data, mechanics, purification, and so on.

At the time, everyone thought Su Yu was the resurrected Ghost Emperor with all his subordinates also resurrecting, hence such varied abilities, not just a single person.

Now it seems, could it really be just one person? And he really has so many professions and abilities?

Thinking of this, everyone was immediately quite shocked, could anyone really hold so many professions?

Perhaps only a monster like Su Yu, who had delved far into the Ghost Energy path, living for who knows how many years, could have the time and energy to practice so many professions.

Which is to say, this method is really feasible?

As long as you live long enough...

And seven-star Transcendents already have long lifespans, they might actually consider it.

At this moment, they were truly tempted by what Su Yu said...

Actually, this method is truly feasible but requires extremely high talent.

It's unlikely for them.

But at most, they would waste a bit of time, and when they found it unreliable, they would give up.

At this moment, Su Yu spoke again:

"Trying multiple professions is indeed very interesting; you can experience different pathways."

"Recently, my Mechanic profession has already begun preparations for a ceremony. Once it succeeds, I should be able to see more landscapes and create more powerful Mechanical Creations, hehe..."

Su Yu casually unveiled his true state.

On the Mechanic's path, he was almost at seven stars!

For Su Yu, the promotion ceremony for a War Mechanic required leading and winning a war, which was impossible to hide.

He might as well openly state it, using the fearsome reputation of the Ghost Emperor, coupled with his own strength, so that even if the people at the Subspace gathering won't help Su Yu, they certainly wouldn't dare to hinder him.

"What? He's about to hold a ceremony! Doesn't that mean he's almost at seven stars!"

Everyone was dumbfounded.

They concentrated on one profession, struggled hard, and were still stuck at seven stars.

But for Su Yu's second profession, he was almost going to hold a ceremony!

No, an old monster like Su Yu might have more than one profession breaking through seven stars!

Everyone couldn't help but marvel, this old monster, every time he opens his mouth, it's shockingly profound, hard to remain calm.

"Ahem, Mr. Su Yu, your experience is precious, but unfortunately, we might find it difficult to try."

Finally, Xiao Shengyin barely regained composure and spoke.

"It's okay, if you can't make progress in the future, you can try this path."

Su Yu casually said and then didn't speak again.

He said so much just now for another purpose, and that was to assert his status as a powerful Mechanic to the others.

Especially to remind Tie Long.

Tie Long's Galaxy Warrior Battle Armor surely needed repairs, and it seemed no one at the gathering had the ability to repair it.

Qi Chen, this child Mechanic, seemed to only know Mechanical Control and not repairs.

Xie Yitian, a data professional, was presumably not very good at making and repairing mechanical things.

And since Su Yu held multiple professions with extensive capabilities.

If Tie Long needed repairs, wouldn't he have to seek Su Yu out?

Sure enough, when Tie Long heard this, recalling the various advanced technologies of the Mechanical City, his eyes sparkled, seemingly moved.

The child Qi Chen, looking at Su Yu, seemed eager as well.

Seems he wanted to exchange some Mechanic insights with Su Yu, but he was a bit afraid of Su Yu and didn't dare speak up.

Su Yu maintained his aloof demeanor, naturally wouldn't initiate conversation with this kid-like character.

Subsequently, everyone finally started exchanging and trading.

They were stationed around the planet for many years. There were always various things they could share and exchange, with various resources and technologies to trade.

Su Yu didn't continue talking and remained silent.

As if he had nothing of worth to exchange or trade.

No one dared to look down on him for it. Once this big shot spoke, it would inevitably shock everyone, who dared underestimate him?

At this moment, Xie Yitian, the [Data Ghost], looked around at everyone and said gravely:

"I have a child who urgently needs a high-level Ghost Energy Erosion issue resolved, needs purification within six hours, or life will be in danger."

"Whatever the reward, feel free to ask ladies and gentlemen."

Most of them didn't speak up since they weren't skilled at purifying pollution and erosion.

Jiang Qianzhu, the [Radiance Nun], did speak, "I can resolve it, but Sun City is over twenty thousand kilometers from Illusion City, I'm afraid it's too late."

Xie Yitian nodded, indeed it was too late. Even at the speed of sound, it would take nearly twenty hours; by the time someone arrives, the body could be picked up.

And Xiao Shengyin's Subspace Transmission could only teleport dead objects, not living ones. Even if possible, they wouldn't dare rashly send a living body into subspace, especially not under Xiao Shengyin's control.

It seemed everyone was helpless.

So they all turned their eyes to the big shot, Su Yu.

After all, he mentioned he was also proficient in purification and was even better at Ghost Energy Control.

He seemed more suitable than Jiang Qianzhu.

Su Yu immediately understood everyone's intention and pondered for a moment, realizing this was an opportunity.

He could visit Illusion City.

He was also quite interested in this "peer" in the data field.

"I could give it a try."

"For a reward, you could offer a map of the Ruins Star, various mechanical technology blueprints, Source Core Crystals, and so forth."

Xie Yitian was delighted to hear this, "No problem! I can provide Source Core Crystals as a reward."

He then hesitantly said, "That child is too weak to travel long distances. Could I ask Mr. Su Yu to depart immediately? Illusion City is six thousand kilometers away from the Dead Silence Wilderness..."

With that distance, even sprinting at the speed of sound would take about five hours, the time was tight.

Su Yu nodded and said, "Hang on, it shouldn't take too long."

Then he vanished directly from the gathering hall.

Everyone was slightly taken aback; this Mr. Su Yu was truly a man of action, leaving as soon as he decided.

However, would such a big shot really sprint six thousand kilometers all the way to Illusion City? "Shouldn't take too long," what does that mean? Six thousand kilometers, how could it possibly not take long?

Chapter 348: Test Flight of the Battle Armor! Changes in the Mechanical Spirit Clone, New Traits of the Battle Armor?

After Su Yu left, the members of the Transcendent Council did not immediately end the gathering.

Instead, with Su Yu's departure, the sinister and terrifying aura of high-level Ghost Energy vanished, and everyone felt relieved, leading to even more lively discussions.

A major topic of discussion was how Su Yu could cover the 6,000 kilometers within just six hours?

Could it really be that he would run at supersonic speeds for five or six hours?

Upon reaching seven stars, the difference between the physical and mental types has diminished.

Even for the mental type, as long as they are willing, they can strengthen their bodies with Spiritual Energy for a short period, reaching supersonic speeds.

But to go faster is difficult; after all, when running on the ground, there is always a speed limit.

Moreover, running thousands of kilometers on foot, covered in dust, doesn't seem to fit the identity of Su Yu, this mysterious ancient monster.

Especially since Su Yu had said he wouldn't take too long.

Taking four or five hours to arrive—wouldn't that be too long?

The crowd was full of speculation.

"Mr. Su Yu might be flying over there."

At this time, Tie Long suddenly spoke.

In the previous battle with Su Yu, Su Yu demonstrated high-speed flying abilities, overtaking him in no time.

"What? Fly over there! He also has flying capabilities?"

The crowd was taken aback and quickly questioned.

"Yes! Last time, when I sparred with him in the Radiation Land, he flew ahead of me, probably at least two or three times the speed of sound."

Tie Long nodded.

"He can actually fly safely on this planet?"

The crowd was stunned by what they heard.

They wanted to escape the planet's constraints, but the big issue was that they couldn't fly.

In fact, finding a way to fly with seven-star strength wasn't difficult.

Some professions with special abilities could inherently fly.

But the key is... they didn't dare to fly!

Previously, the Transcendent Council had ten members.

Two of them died silently because of flying.

One had just advanced to seven stars and died at home, leaving only ashes. Another was struck by Heavenly Thunder when testing a flying device.

Which left only eight members in the council.

Under these circumstances, who would dare to fly?

Moreover, the crowd now knew that the strange force restricting flight was likely a Mechanical Creation left by the Planet-Level Transcendent, Zhang Chenfeng.

With that terrifying power, killing a regular seven or eight-star would probably be a breeze.

So, they dared not fly anymore.

But now, they heard from Tie Long that Su Yu could fly at supersonic speeds? And he's been fine for so long?

What's going on?

Could it be that Su Yu has become so powerful that he no longer fears Zhang Chenfeng's creations?

Is he truly an ancient monster that survived for ten thousand years?

"Such an important thing! Why didn't you mention it earlier!"

The crowd couldn't help but scold Tie Long.

This guy is too unreliable!

"Ahem, did I not mention it before?"

Tie Long scratched his chin, seeming a bit embarrassed.

Then he widened his eyes and countered back: "It's all because last time when I talked about Su Yu with you all, you were too noisy, and it disrupted my thoughts, causing me to forget."

The crowd was speechless; Tie Long probably really forgot to mention it last time.

It was quite frustrating.

But the crowd couldn't do much about Tie Long.

Tie Long would only engage his brain when encountering battles or discovering a worthy opponent.

At other times, he barely uses his brain.

After a qualitative change at seven stars, one's brain is greatly developed, and with a bit of reliability, they wouldn't forget things.

But Tie Long chooses not to use his brain on purpose, who can do anything about it?

Ignoring Tie Long, the crowd continued their enthusiastic discussion:

"So, Mr. Su Yu is highly likely to fly to Illusion City?"

"Not necessarily, last time he flew a few hundred kilometers without issue; this time, flying a few thousand kilometers, could he still be fine?"

"Maybe if he slows down a bit, it would be safer?"

"If he slows down, he might not be faster than running, what's the use then..."

"What if Mr. Su Yu really flies directly and nothing happens?"

"That means he might truly not fear Zhang Chenfeng's creations, which would be terrifying..."

...

On Su Yu's side, after "logging out," he returned to the real world and immediately asked the Mechanical Spirit to bring up the location map of Illusion City.

Prior to this, the information provided by Xiao Shengyin included the locations of cities where each Transcendent Council member resided.

Those cities were too big of a target, and with Su Yu's current strength, he could eventually find out their locations if he wanted to.

So Xiao Shengyin chose not to hide it and frankly informed him.

Otherwise, if he hid this information and made Su Yu dissatisfied, he might sneak over one day, which would be even more dangerous.

After giving Su Yu the location information of these cities, there's been a significant effort in upgrading their Defense Systems over the past week.

This is to guard against any malice Su Yu might have, for better defense.

A city, combined with the suppression of a seven-star strongman, should be able to withstand it.

However, a week has passed without any disturbance from Su Yu, indicating he likely harbors no ill intent, which reassured everyone a lot.

This time, Xie Yitian sought Su Yu's help, essentially trusting him.

After pulling up the location of Illusion City, Su Yu glanced at it, and his battle armor emitted high-pressure gas, allowing him to float in the air.

If he pushed his armor to its limits, at thirteen times the speed of sound, he could travel about 16,000 kilometers in one hour.

Chapter 349: Test Flight of the Armor! The Transformation of the Mechanical Spirit Clone, A New Trait of the Armor?_2

A mere distance of six thousand kilometers can be covered in less than half an hour.

"But flying over like this might not be wise..."

Su Yu dared not fly directly.

He now knew the dangers of flight. Flying recklessly might result in being struck down by a bolt of laser or something similar.

However, despite knowing the dangers, he had to give it a try this time.

It felt suffocating to have such high-speed capabilities in the battle armor yet not dare to use them.

Moreover, if danger arose in the future and he needed to use the flight capability of the armor to escape but dared not fly, it would be a pointless death.

Therefore, Su Yu wanted to take this opportunity to test the flight limitations of this planet.

In the future, he would have a better idea during an escape.

Actually, Su Yu already had a rough understanding of the flight limitations.

Firstly, based on the experiences of two deceased members from the Transcendent Union, Su Yu inferred two characteristics.

First, Transcendents with strong flight capabilities get targeted as soon as they ascend. Zhang Chenfeng had clearly made arrangements in subspace as well.

It might be that Transcendents with this type of flight ability have a special mark in subspace, making them easily noticeable.

The seven-star who could control gravity had just ascended when he was killed at home.

If Feng Tian were to ascend to seven stars by chance, it probably wouldn't end well either.

Furthermore, large flying devices also become targets.

The other seven-star from the Transcendent Union got struck down during a test flight on a flying device, even during a low-altitude flight.

Su Yu speculated that the target of the flying device was too big and conspicuous. That Data Mechanic was intending to build a spaceship, which surely isn't a small target.

Thus, the outcome is quite clear.

Su Yu theorized that first, one shouldn't rely on the abilities of a seven-star profession to fly directly.

Secondly, the flying target should be small.

And Su Yu perfectly fits these traits.

He relied on the flying system of his battle armor, which had no corresponding marks in subspace and wouldn't be monitored by subspace.

Moreover, the battle armor was so small that it was quite a tiny target.

Last time, during the fight with Tie Long, Su Yu flew for several hundred kilometers without a hitch.

This was Su Yu's confidence in conducting the experiment.

If not, it wouldn't be an experiment but courting death.

"Actually, it's still somewhat reckless..."

Su Yu still felt a bit uneasy.

Thus...

He took off the battle armor and commanded, "Brutal Battle Armor! Go out and fly around on your own!"

After all, the armor had strong intelligence and could fly by itself.

Even if it encountered danger and was shot down, its recovery ability wouldn't allow it to be destroyed outright.

"Yes, Master..."

The Mechanical Spirit immediately responded, but it seemed somewhat aggrieved in its tone?

Su Yu's command seemed like setting it up.

"Hmm? What's wrong with you?"

Su Yu was somewhat surprised by this slightly aggrieved voice.

"Master, flying seems dangerous; I'm a bit scared..."

The Mechanical Spirit within the armor responded.

"You actually know fear?"

Su Yu was even more amazed.

Originally, every clone of the Mechanical Spirit was just like the main body.

Although intelligent, it was very cold and mechanical, rarely showing emotions, unlike Nuonuo who was lively.

This wasn't a problem; such a Mechanical Spirit was very calm and efficient.

But now, this Mechanical Spirit actually felt fear?

"What happened to you?"

Su Yu asked gravely.

This clone of the Mechanical Spirit loaded in the battle armor seemed to have undergone a peculiar change?

"Master, recently I've been feeling like there's a voice in the Brutal Core talking to me, but I can't understand it."

"Then today, I suddenly started feeling fear."

"It's bizarre since I'm just a clone; even if deleted, it shouldn't matter, so why fear..."

"If Master thinks there's a problem, you can delete and reset me."

Though the Mechanical Spirit had changed a bit, it still carried out Su Yu's orders without hesitation, and answered honestly.

"There's a voice speaking from the Brutal Core? It's the Brutal one!"

Su Yu realized instantly.

It was a fragmentary consciousness of that Brutal Evil God, corroding the Mechanical Spirit in secret, making it feel fear.

The fact that Mechanical Spirits, as data lifeforms, could also be corroded?

Such Evil Gods were truly limitless in their methods and impossible to prevent.

Could it be that the Brutal Evil God intended to corrupt the Mechanical Spirit into its follower?

Data lifeforms could become believers too? How fascinating.

While contemplating, Su Yu projected his spirit into the Brutal Core.

He found that the Brutality inside was still tightly sealed, and there was plenty of Flame of Truth inside the core.

Yet, the Mechanical Spirit was indeed corroded.

"How interesting."

Su Yu pondered.

"Master, are you going to delete me?"

The Mechanical Spirit asked.

"No."

Su Yu shook his head.

This clone of the Mechanical Spirit was still within control, and its core code hadn't changed much, only inexplicably generating some emotional code, quite intriguing.

Su Yu could sense the presence of this clone at any time using his Data Mechanic abilities, and erase it at a thought.

But Su Yu did not do so, as this clone now had emotions of fear, erasing it seemed rather cruel.

Besides, it was a valuable sample, and Su Yu wanted to study what a corrupted data lifeform looked like.

"Don't worry, the Master will not delete you."

"You also don't need to fear, this experiment shouldn't be that dangerous."

Su Yu comforted.

Just in time, he was about to head to Illusion City, where the seven-star Transcendent, Xie Yitian, was an expert in the data field.

Su Yu planned to discuss with him and study the changes in the Mechanical Spirit clone.

"Yes, Master!"

The clone of the Mechanical Spirit responded cheerfully upon hearing Su Yu's comfort.

It now seemed a bit like Nuonuo.

Then it continued, "Master, I'd like to activate the stealth function during the flight, if I may? That would give me a sense of security."

Upon hearing this, Su Yu nodded, "Yes!"

In fact, Su Yu felt this stealth ability might not be very useful during flight.

After all, flying at over ten times the speed of sound was too loud and noticeable; what use was mere invisibility?

This stealth ability seemed only suitable for low-speed stealth operations or activating hidden abilities like Hidden Kill.

"Yes, Master!"

The clone of the Mechanical Spirit responded happily.

Then, the Brutal Battle Armor in front of Su Yu suddenly vanished, indicating the activation of stealth.

"Master, I'm going to test fly! I won't fly too high, just for five minutes before coming back."

The Mechanical Spirit clone reminded, then fell silent.

Seconds later, Su Yu sensed that the battle armor had already disappeared from Mechanical City.

In such a short time, it had flown more than twenty kilometers away!

This was the initiation of supersonic flight capabilities!

But crucially, there was no noise! It flew away silently?

If Su Yu couldn't sense the presence of the Mechanical Spirit clone and high-positioned Ghost Energy in the armor, he might have thought it was lost!

"So, this stealth function not only hides, but also masks the sound and air movement during high-speed flight!"

"This is immensely useful!"

Su Yu instantly realized that the stealth skill of Brutal Battle Armor was indeed of great utility.

On the contrary, it was incredibly significant.

It could hide the violent turbulence during high-speed flight, thus greatly enhancing its concealment.

The probability of being detected by Zhang Chenfeng's creations was greatly reduced! Safety was significantly increased.

"The battle armor I created has features even I didn't know about, had to be reminded by the Mechanical Spirit..."

Su Yu couldn't help but chuckle self-deprecatingly.

Can't really blame Su Yu for being careless; he hadn't dared to fly easily before, and therefore couldn't test it.

Actually, the materials he used to make the stealth system only had invisibility traits and lacked the power to hide sound and wave.

Maybe those materials changed after absorbing a lot of high-positioned Ghost Energy.

It was indeed a pleasant surprise.

Five minutes later, the Brutal Battle Armor returned safely, confirming it hadn't been detected by Zhang Chenfeng's creations.

"Master! Test flight lasted five minutes, height five hundred meters, speed twelve times the speed of sound, total distance 1237 kilometers, encountered no danger!"

The clone of the Mechanical Spirit reported happily.

"Not bad!"

Su Yu nodded, his face glowing with joy.

The stealth function did consume energy and impacted speed slightly, but not severely, maintaining a speed of twelve times the speed of sound!

"Depart! Head to Illusion City!"

Su Yu chuckled softly and donned the battle armor again.

Chapter 350: Illusion City! Ultimate Weapon! Shocked Su Yu!

The armor first activated invisibility, then silently took off, carrying Su Yu out of the Mechanical City without a sound, reaching a hundred meters high, and flew toward Illusion City in the southwest direction.

In just a moment, it had already flown over a hundred kilometers.

After all, it was twelve times the speed of sound, capable of crossing four kilometers every second.

The intense waves stirred up by the flight were counteracted by the armor's invisibility trait, only stirring up a slight breeze, almost without any sound.

Su Yu felt completely at ease now, with such strong invisibility abilities, he shouldn't be discovered.

Then, he threw caution to the wind and flew full speed towards Illusion City. Before long, he had flown another several hundred kilometers.

At such a high speed, the ground rapidly receded in Su Yu's eyes, and adrenaline rushed wildly.

Primarily, he was cautious, not daring to fly too high, at an altitude of only a hundred meters. At this height, the perception of speed was particularly acute.

"This is thrilling!"

While flying, Su Yu couldn't help but express his exhilaration out loud.

The human yearning for flight, speed, and heights is engraved in our genes.

This flight experience was much better than the last time when he barely managed to fly by flapping his legs!

And the speed was four times faster!

This experience of extreme speed made Su Yu feel indescribably exhilarated, wishing he could let out a long howl. However, he held back, as he was now a mysterious big shot, needing to mind his image.

While flying, Su Yu couldn't help but look up at the overcast sky above.

Sooner or later, he wanted to break through the clouds and see what was up there?

...

Twenty minutes later.

Six thousand kilometers away in Illusion City.

This is a high-tech modern city, spanning several tens of kilometers, filled with skyscrapers enough to house over a million people.

If squeezed, accommodating two million people might not be impossible, much larger in scale than War City.

The Mechanical City, with only a few thousand people, couldn't compare at all.

Like War City, Illusion City was also surrounded by tall steel walls.

After all, in this era rampant with Radiation Beasts, a city without walls was courting death.

Inside the city, the traffic was heavy, with various machines and vehicles coming and going in an endless stream.

Other machines were entering and exiting the city, transporting various resources.

The strange thing was that the city was filled with creations and vehicles but hardly any living people were seen.

There weren't even people controlling those vehicles.

When Su Yu flew over, he saw this kind of "unmanned" city.

Indeed, in just over twenty minutes, he had crossed a distance of six thousand kilometers and arrived above Illusion City.

"This city is interesting, where did all the people go?"

"Could it be that this city belongs to machines? The true Mechanical City?"

Maintaining twelve times the speed of sound, Su Yu circled above Illusion City, feeling a bit strange.

At his speed, he viewed the entire city in a short amount of time.

He actually only saw a few dozen people walking on the ground.

Moreover, these people seemed to have pale faces, and their bodies and limbs appeared somewhat weak.

In this dangerous era, it was incredible; how did such weak individuals survive?

Su Yu pondered whether to land and take a look.

He was about to slow down when suddenly a thought occurred to him, and he continued maintaining his speed while partially lifting his invisibility.

Boom!

With a slight lifting of the invisibility, the Brutal Battle Armor immediately collided violently with the air, causing a thunderous roar like Heavenly Thunder.

Simultaneously, the intensely concentrated high-level Ghost Energy aura on the Brutal Battle Armor also spread out.

Then, Su Yu immediately reactivated invisibility.

If he completely lifted it, he feared being detected by the surveillance in the sky, which would be asking for death.

However, just with this momentary exposure, a harsh alarm rang out across the sky of Illusion City:

"Alert! Alert!"

"High-corrosion energy reaction! High-speed reaction!"

"Energy level above eight stars!"

"Speed, twelve times the speed of sound! And with invisibility capability!"

"The Defense System is activated, preparing to engage the enemy!"

The alarm was produced by synthesized data, with a voice somewhat similar to that of a Mechanical Spirit.

Perhaps it was also a Data Life.

As the alarm sounded, every building in Illusion City lit up with a red warning light.

Simultaneously, various gun barrels, lasers, and pulse generators emerged from the windows of those buildings.

These buildings didn't seem to be for habitation at all but were war fortresses filled with warfare equipment!

These terrifying large-caliber weapons continually rotated their barrels, trying to aim at Su Yu in the sky.

However, Su Yu's speed was too fast, and he had invisibility, only causing a slight breeze. These weapons couldn't lock on at all.

Even with thermal imaging, energy sensors, and other devices, only faint shadows could be detected, fleetingly.

Moreover, even if Su Yu completely revealed himself, at his speed, these weapons would probably still struggle to aim.

It seemed they hadn't been designed to face such a high-speed enemy.

"Unable to aim! Proceed with emergency evacuation!"

"Call the City Lord, call the City Lord!"

The alarm suddenly shifted, admitting its powerlessness.

Subsequently, those gun barrels no longer attempted precise aiming and simply opened fire!

Regardless of whether they could hit, at least they fired first.

Boom!

Countless shells, lasers, plasma beams, and high-energy pulses crisscrossed in the sky over the city.

It was like a "downpour" from below, lighting up the entire sky.
