

Infinite 521

Chapter 521: Ascending! Sky City! The Game Changer Su Yu!_2

The people came to the top of the wall, the scenery outside was unobstructed.

However...

"What's going on? Where are the enemies?"

"What enemies? Must be a mistake, it's just the Mechanical City starting up again."

"But this time the tremor is different from before, it feels very different, very strange, what's happening?"

As everyone was confused, someone noticed something was wrong.

"What's going on, why does it seem like we're still rising?"

The Mechanical City had been slowly rising, and at first, no one paid attention.

After all, when the Mechanical City starts up, it definitely needs to rise a certain distance first to deploy those mechanical arms.

But the length of the mechanical arms has a limit, and naturally, so does the height to which it can rise.

Yet now, someone noticed that the height of the Mechanical City had already exceeded the normal limit.

"What? Still rising?"

"The altimeter shows it's already risen to a kilometer high and hasn't stopped!"

"Good heavens! A kilometer high? What's happening? Is the entire Mechanical City flying?"

Most of these people came from Holy Hidden City and Wind City, with many advanced smart devices in hand, an altimeter is not high-tech, many have it.

They quickly discovered that the Mechanical City's altitude had already exceeded a kilometer!

How could this be possible? Everyone couldn't believe it.

Such a large city, being able to move with mechanical arms is already unbelievable.

And now it seems to have flown up?

"Could it be that the legendary Lord Su Yu has upgraded the Mechanical City again? An upgrade added flight capability?"

The crowd exclaimed.

Most of these new residents had never seen Su Yu.

But they had heard the name, knowing that this entire Mechanical City was personally created by Lord Su Yu.

So when they found no outside enemies, and instead the Mechanical City might be flying, they immediately thought of Su Yu.

"Is Lord Su Yu really that powerful?"

"Could he really make this big city fly? Or did he just lengthen the mechanical arms?"

While exclaiming, everyone craned their necks.

Trying to see if there were any mechanical arms under the base of the Mechanical City.

If not, then they were really flying!

Unfortunately, because everyone was standing on top of the Mechanical City, the vantage point was wrong, they couldn't see the base of the Mechanical City or those spewing engines.

This made everyone anxious.

Thankfully, many residents here were already semi-mechanized, having awakened Extraordinary Abilities.

Their abilities were varied, and those with special abilities and enough courage wanted to climb down the city walls directly to the base of the Mechanical City.

To see it clearly.

Just then, a broadcast voice sounded.

It was Su Yu's voice: "Residents of the Mechanical City, I am Su Yu."

"In recent days, I did an upgrade to the Mechanical City's Energy System, enabling the city's flight capability."

"This is the first test flight."

"Right now, we are flying at an altitude of 1,200 meters."

Su Yu, snapping out of his contemplation, noticed the commotion and began to explain.

Meanwhile, he projected images of the base of the Mechanical City on the sky above it for everyone to see clearly.

Upon seeing the hundreds of giant engines like small suns in the image, everyone's breath instantly stopped.

"No... no mechanical arms, it's truly flying!"

"We are really in the sky!"

"Mechanical City! Sky City! Miracle City! Myth City!"

"Lord Su Yu! Lord Su Yu!"

After a while, the entire Mechanical City erupted in thunderous cheers.

Everyone was so excited they were incoherent.

The original Mechanical City could walk around using mechanical arms, already enough to amaze people.

Now it's flying, even more incredible.

How could they not be excited as residents of such a Miracle City?

How could they not feel thrilled?

Although most people didn't know the significance of flight or the planet's blockade.

Yet the longing for flight is a primal instinct deeply ingrained in all humans!

Even Tie Long, Xie Yitian, and Xiao Shengyin were overwhelmingly excited at this moment.

Due to the earlier commotion, they had gathered around Su Yu.

At this moment, they no longer had the image of the unrivaled seven-star masters, but each was excited like a child: "It's flying! It's really flying!"

"I secretly researched space rockets before, but never really experimented, now I've finally experienced it!"

"The view from above in the sky, is this what it feels like?"

Tie Long was different, having fused with the Galaxy Battle Armor, he could fly on his own.

But for the others, today was their first time flying so high.

As seven-star or eight-star masters, wielding immense power and having long lives, their thirst for the sky is actually stronger than ordinary people.

After all, with such powerful strength, who would be content with just running on the ground?

It was previously due to the blockade, forced to endure, enduring for many hundreds of years.

Now finally flying to the sky, this sense of liberation and excitement, even Su Yu had trouble understanding.

After all, Su Yu hadn't long been a seven-star, flying around the world with the Brutal Battle Armor everywhere, unlike them, who had endured for so long.

After being excited for a while, they simultaneously turned to look at Su Yu.

For a moment, no one spoke, seemingly too excited to organize words.

After a long time, Xiao Shengyin spoke, "Mr. Su Yu, is the current altitude of the Mechanical City its limit? Can it go higher?"

Upon hearing this, Su Yu shook his head: "The Mechanical City's engines are powered by Spiritual Energy, not limited to within the atmosphere, so theoretically, it can directly fly out of the atmosphere into space."

"When I originally designed the blueprint for this city, it was intended as a Cosmic Battleship. I thought it would take a long time to actualize this design, but didn't expect to complete the first test flight so soon."

Su Yu's tone was somewhat emotional, he himself hadn't expected progress to be this fast.

It was the legacy means of the devil Foe, causing millions of people and the Mechanical City to coexist.

Coupled with Zhang Chenfeng's creations, leaving behind Energy Crystals.

These two factors solved the most critical energy issue of the Mechanical City.

This allowed it to have enough power to rise into the sky.

Previous successive battles weren't fought in vain.

"What? It can actually fly outside the atmosphere?"

Upon hearing this, everyone was breathless and even more excited.

At this point, isn't it comparable to those creations of Zhang Chenfeng in the sky?

Equally gigantic, equally magnificent, equally miraculous!

"Don't think too much. The current Mechanical City only has flight capability but lacks life support systems for space. If it truly flies up, aside from a few of us surviving for a while, everyone else would die."

"Moreover, Zhang Chenfeng's creations would not allow us to fly up."

Seeing everyone so excited they couldn't control their breath, Su Yu couldn't help but pour cold water on them.

Hearing this, everyone calmed down immediately.

Right, even with the flying capability, they couldn't dare just fly out.

"Flying this high won't be a problem, right?"

The crowd couldn't help asking.

Reminded by Su Yu, they remembered Zhang Chenfeng's creations still watching from the sky.

Fearing that such publicity might attract Zhang Chenfeng's creations' attacks.

Although Su Yu and Tie Long, Xie Yitian, had passed the trial and could fly freely.

But it was the three of them who passed the trial, while the entire Mechanical City housed millions!

Su Yu heard this, smiled slightly: "No worries!"

"I've already realized, Zhang Chenfeng's creations, after waiting for tens of thousands of years, seem to be also impatient, they want to break the deadlock, hence arranged that trial."

"Now that I've passed the trial, I've been selected by them as the one to break the deadlock."

"So now I have the utmost freedom on this planet."

"As long as I'm not excessive in my actions and don't actively touch taboos, there will be no danger!"

Chapter 522: The One Who Breaks the Game, the Radical Su Yu, Time Is Running Out!

Upon hearing Su Yu's words, Tie Long, Xie Yitian, and Xiao Shengyin all displayed looks of confusion.

What does it mean that Su Yu was chosen by Zhang Chenfeng's creations to become the one who breaks the situation?

Aren't Zhang Chenfeng's creations supposed to block any beings from entering space?

Breaking the situation? Break what situation?

Could it be...

Everyone present was intelligent, and because of Su Yu's recent words, they quickly thought of many things.

"It seems you all have understood, that's right..."

Su Yu chuckled and began to explain.

For the past few days, aside from researching that energy crystal, Su Yu had also been contemplating a very important question.

Why did Zhang Chenfeng's creations organize this trial?

And after completing the trial, they even gave Su Yu a great gift?

The two energy crystals contained highly advanced technology.

Without these, Su Yu definitely couldn't have made the Mechanical City fly in just a few days.

To give such a great gift, and under the guise of a trial, allowing Su Yu to freely fly within the planet.

Is it merely because Su Yu possesses the Giant God Soldiers' New Recruit Navigator, considering him as a new recruit of the Giant God Soldiers? Treating Su Yu as 'one of their own'?

It seems impossible no matter how you think about it.

Tie Long, Xiao Shengyin, and others didn't know the inside story, but Su Yu did.

That New Recruit Navigator was something he got by accident, essentially picking it up.

If he could pick it up, others could too, naturally.

Can any random person who picks up this New Recruit Navigator receive the same treatment as Su Yu?

Even the pre-evolution Nuonuo didn't have such a rigid determination method.

Unless Zhang Chenfeng's creations are all brainless artificial idiots.

However, a bunch of artificial idiots couldn't possibly seal Ruins Star for so many years.

If that's the case, then there's only one possibility.

Zhang Chenfeng's creations issued the trial to Su Yu not because of that New Recruit Navigator.

It's purely because of Su Yu himself.

It's Zhang Chenfeng's creations that deliberately chose Su Yu!

Even without that Navigator, they would find a reason to give Su Yu a trial.

Then the question arises again, why did Zhang Chenfeng's creations choose Su Yu?

In the first two days, while thinking, Su Yu kept suspecting if Zhang Chenfeng's creations had some conspiracy targeted at him, hence deliberately showing favor.

But on the last day, Su Yu suddenly thought of a possibility.

That is, could Zhang Chenfeng's creations also be deeply trapped and unable to extricate themselves?

So they wanted to find someone to break the situation?

Su Yu's reasoning had sufficient grounds.

He is surrounded by Nuonuo, Mechanical Spirit, Fear Intelligence, and Mechanical City, these four mechanical apostles.

They are all Su Yu's creations, each with their personality.

They are not merely tools, but living beings with their thoughts and pursuits.

It can be imagined that Zhang Chenfeng's creations are surely like Nuonuo and the others.

No!

Those mechanical creations must be even more vivid and emotionally rich.

Because Zhang Chenfeng is much more powerful than Su Yu, and his creations are naturally more advanced and powerful than Su Yu's creations.

However, these lively mechanical lives have been trapped on this planet for millennia due to Zhang Chenfeng's supreme command.

Might they have already become intolerable and wish to break the situation?

But because of their essence as mechanical creations, they fundamentally cannot defy Zhang Chenfeng's supreme command.

And with Su Yu's rapid rise, possessing multiple extraordinary professions with amazing strength.

Perhaps, because of this, he was noticed by these mechanical creations and regarded as the breaker of the situation.

They cannot bypass their own supreme command, as that would be akin to suicide.

But an outsider like Su Yu might have that possibility.

Therefore, Zhang Chenfeng's creations opened this door of convenience for Su Yu.

Under the pretense of a trial, allowing Su Yu to have the permission to freely fly within the planet.

At the same time, giving him those two energy crystals.

Perhaps this is the greatest convenience they could give to Su Yu without violating the supreme command.

Otherwise, no matter how strong Su Yu is, Zhang Chenfeng's creations would only launch a brutal attack to prevent Su Yu from breaking the blockade and entering space.

How could they organize a trial?

Upon hearing Su Yu's explanation, those who were still initially confused suddenly saw the light.

"So that's how it is!"

"Does that mean, in the future, Zhang Chenfeng's creations are not only not our enemies but are actually our allies instead?"

Everyone couldn't help but exclaim excitedly.

They looked at Su Yu with eyes sparkling.

The terrifying mechanical creations they regarded as their greatest enemies, are now becoming allies because of Mr. Su Yu's influence!?

Su Yu, however, shook his head. "Don't be too optimistic."

"Zhang Chenfeng's creations should be absolutely loyal to him. Suddenly wanting to break the situation, there must be a very special reason."

"The specific details still require investigation."

"Don't truly consider them as allies. Otherwise, you might die without knowing why."

Everyone nodded in agreement, fully understanding.

They weren't foolish enough to genuinely consider those mechanical creations as allies.

Seeing everyone understand the gravity of the situation, Su Yu nodded in satisfaction and continued:

"Of course, after this test flight, I have surmised that they mean no harm. For now, we are still in a tacit cooperation relationship with them."

"So usually, there's no need to be too concerned about them. Like the Mechanical City ascending now, there is no problem; they won't interfere."

This time, Su Yu boldly let the Mechanical City ascend as a test to probe Zhang Chenfeng's creations' attitude.

Chapter 523: The Game Changer, the Radical Su Yu, Time is Running Out! _2

Now it seems that Su Yu's "influence" is indeed quite effective.

The previous two members of the Transcendent League did not receive such treatment.

One was researching flight equipment, and just after a test flight, was struck dead by Heavenly Thunder.

The other, a gravity ability user, had just advanced to the seventh star and died at home.

But Su Yu made the entire Mechanical City, along with millions of people, fly so high without any incident.

Zhang Chenfeng's creations have shown a very clear attitude.

They are essentially turning a blind eye to Su Yu and his forces.

In fact, to some extent, Su Yu's test flight this time was risking the lives of the entire city's residents.

If Su Yu's speculation was incorrect, and if Zhang Chenfeng's creations attacked the Mechanical City, then it would be dangerous.

It's possible that millions of people could all perish.

But there's no other way.

If he doesn't make the attempt, his previous ideas would always remain just speculation.

Now that he's tried, much of the speculation can be confirmed.

In future operations, he can act with more freedom.

Besides, although it was risky, it wasn't a big issue.

After all, Su Yu is preparing for global development, which is far more significant than a mere test flight.

Once he implements his plan, it will definitely cause a stir and attract attention.

Unless he doesn't pursue large-scale development, and millions of people live quietly.

But in that case, it's a sure death sooner or later.

Because Su Yu's gamble comes with a deeply hidden speculation.

That is, could it be that Zhang Chenfeng's creations want to break the stalemate because they're having trouble containing the Brutal Evil God's true form?

If the Brutal Evil God is using some unknown method to break through the blockade.

And by then, if Zhang Chenfeng's creations remain bound by supreme commands and unable to act freely.

That would be dangerous!

It's entirely normal that the entire planet could be wiped out by a mistake.

So they want to break the stalemate and choose Su Yu as their agent.

After speculating on this point, Su Yu felt a sense of urgency.

Even those Zhang Chenfeng's creations couldn't stay put.

What exactly is happening in the depths of Subspace, at the true location of the Brutal Evil God?

That's why Su Yu's actions are so aggressive.

He directly let the Mechanical City take millions of people for a risky test flight.

Because he fears that without this aggressiveness, there won't be enough time!

He can't just sit and wait for death!

First attempt the test flight, and once successful, immediately launch large-scale global development, acquire resources, and arm everyone!

To face the truly monumental crisis of the future!

These real intricacies, Su Yu did not disclose.

But Tie Long, Xiao Shengyin, and the others, their eyes flickering, clearly had thought of it.

But they did not speak, only appearing solemn.

"It seems, things are really about to change!"

They each thought silently in their minds.

If it truly is the Brutal Evil God's true form trying to break free, the previous Evil Spirit crisis was nothing at all.

"Fortunately, we have Mr. Su Yu, otherwise we wouldn't even know how we'd died."

They all looked toward Su Yu, then suddenly spoke in unison: "Mr. Su Yu, where are we heading next?"

Their tones were very serious.

Though it sounded as if they were asking where to fly after the Mechanical City ascends.

But Su Yu understood, what they really meant was: No matter what Su Yu wants to do or where he wants to go in the future, they will follow his lead!

Only Su Yu might have a chance to lead them to survival!

Hearing this, Su Yu smiled slightly: "First to Illusion City, then to Beihan City, and gather the population of these two cities."

"After that, start global large-scale development!"

To carry out global development, Su Yu naturally would not overlook the populations of Illusion City and Beihan City, who are all ready labor force.

Tie Long and the others immediately replied: "As you command, Mr. Su Yu!"

The Mechanical City started its engines and flew northward.

At the same time, the Mechanical City activated its shield and invisibility function.

Previously, to probe Zhang Chenfeng, Su Yu allowed the Mechanical City without any concealment.

Now that the probing is done, it's best not to be too conspicuous, so invisibility was turned on.

The invisible Mechanical City continued accelerating, quickly surpassing the speed of sound, and continued to accelerate.

Originally, the Mechanical City's shield could not withstand the impact of supersonic speeds.

But now, after Su Yu improved the Mechanical City's energy system, its shield has been greatly enhanced.

Sufficiently capable of withstanding such high-speed flight impacts.

However, Su Yu only accelerated to five times the speed of sound before stopping the acceleration and shutting down the engines.

Letting it rely on inertia to fly northward.

In fact, it could go even faster, but Su Yu dared not.

There's no choice, as going any faster would generate too much inertia.

Fearing with the current power of Mechanical City, it would be impossible to stop it in a short time.

It might fly straight out of the atmosphere and crash into Zhang Chenfeng's creations.

In that case, Zhang Chenfeng's creations certainly couldn't just turn a blind eye.

This entire city of people would be doomed.

At five times the speed of sound, nearly 6000 kilometers could be covered in an hour.

In just over an hour, the Mechanical City arrived over Illusion City.

Xie Yitian immediately returned to announce to the entire city that Illusion City would be integrated into the Mechanical City.

As the City Lord, his orders were supreme, and though residents of Illusion City were baffled, they couldn't resist the command of their City Lord.

Soon, the Mechanical City descended and began to engulf Illusion City.

Within Illusion City, naturally, it was a pandemonium, such a massive scene would amaze anyone.

However, true to their habit of immersing themselves in virtual worlds, the residents of Illusion City quickly calmed down, taking out cameras, snapping photos for memories.

They also discussed incessantly: "My god, I nearly thought this was a new map update in the virtual world!"

"What new map could compare to this kind of awe? This isn't virtual; it's reality!"

"Yeah! Seeing it in reality is far more awe-inspiring than in the virtual world! So much more real!"

"Quick, take pictures! Make sure to model and recreate this scene in the virtual world in the future!"

This bunch clearly shares the same mindset as Xie Yitian...

After engulfing Illusion City, the Mechanical City's filling reached 121%.

Evidently, it was "overstuffed."

But it's not a big issue; its Design Blueprint inherently had no fixed limits, allowing ample room for expansion.

Once done with Illusion City, the Mechanical City continued flying north.

Due to increased mass, Su Yu reduced the speed of the Mechanical City slightly to four times the speed of sound, which was still fast enough.

Soon, the Mechanical City arrived over Beihan City.

Tang Xiaomei was, at that moment, quietly waiting in her Ice Tower.

She looked puzzled and anxious.

Because today was yet another gathering day.

However, the assembly token had shown no sign of movement.

She intended to wait a little longer and then utilize emergency contact functions to reach other members.

At that moment, she suddenly sensed something amiss.

"What is this? So huge! So terrifying!"

Tang Xiaomei sensed the approaching Mechanical City, instantly becoming terrified.

Tie Long, a former eight-star, was scared enough when the Mechanical City approached. Let alone Tang Xiaomei? And that was when the Mechanical City was moving on legs.

Now the Mechanical City was flying in at four times the speed of sound, absolutely terrifying to the extreme.

"Could it be that Zhang Chenfeng's creations are descending straight from the atmosphere to attack?"

"Or is it the Brutal Evil God's true form arriving?"

"Have the other members already met with disaster?"

"It's over; today, I'm doomed!"

"Transcendent League members, Mr. Su Yu..."

Tang Xiaomei instantly fell into despair.

Such a terrifying enemy, undoubtedly impossible to fight against, and impossible to escape from, only death awaits.

Her mind flashed with images like a carousel, showing the members of the Transcendent League, and old friends from before.

For some reason, it finally stopped on Su Yu's young face.

Just then, a familiar voice of Tang Xiaomei's came through: "City Lord Tang, do not panic, it's me, and Chairman Xiao is here as well."

"The one in the sky now is my Mechanical City..."

Chapter 524: Devouring Beihan City, Melt! The Mysterious Ice Tower!

At this moment, the Mechanical City and Beihan City were close enough, so Su Yu could transmit information to Tang Xiaomei through Spiritual Energy.

Tang Xiaomei was suddenly awakened from her previous state upon hearing Su Yu's voice.

Only then did she realize it wasn't a terrifying enemy coming but Mr. Su Yu and members of the Transcendent Union?

And that giant object in the sky was actually Mr. Su Yu's Mechanical City?

How could this be possible?

Tang Xiaomei almost thought she was facing a life-and-death crisis, under too much pressure, causing hallucinations.

At this moment, she suddenly felt a Spiritual Energy, carrying a wealth of information, transmitting to her.

"It really is Mr. Su Yu's aura, could it all be true?"

Tang Xiaomei sensed a familiar aura on the Spiritual Energy, which made her slightly believe.

Then she began to receive the information.

Soon, she was shocked by that information.

In the information, Su Yu replayed the major events that had previously occurred for Tang Xiaomei.

With Su Yu's ability as a Data Mechanic, transmitting this information was very simple, and the content was detailed, much faster and more convenient than speaking.

Tang Xiaomei, being a seven-star powerhouse with a strong spirit, could probably digest and understand this information in just a few seconds.

At the end of the information, Su Yu asked if Tang Xiaomei and Beihan City were willing to join the Mechanical City and collaborate on major affairs.

After all, although Su Yu wanted to absorb the population of Beihan City, he wouldn't forcibly take them, as they were all companions in the Transcendent Union.

It was still necessary to seek Tang Xiaomei's consent.

However, Su Yu believed the possibility of Tang Xiaomei agreeing was very high.

But after Su Yu sent the information, he didn't receive a reply from Tang Xiaomei for a long time.

Su Yu felt slightly puzzled but soon understood.

He guessed that the information was too overwhelming, leaving Tang Xiaomei stunned and not yet recovered.

Su Yu's guess was correct; Tang Xiaomei was indeed blank-headed now.

The information was truly filled with continuous, astonishing events.

Su Yu first upgraded the Mechanical City, then the War City, and the City of Heavenly Punishment.

Then he rushed thousands of miles to battle the Hatred Demon, rescuing millions of residents in the Holy Hidden City and Wind City, along with companions Xiao Shengsheng, Shao Lan, and Qi Chen.

Right after the battle with the Hatred Demon, Su Yu immediately accepted the trial of Zhang Chenfeng's creation, fighting with his main body in a nine-star level earth-shattering battle.

After the trial, Su Yu employed methods to create symbiosis between millions and the Mechanical City, resulting in the birth of millions of Transcendents.

Then, after spending a few more days, the Mechanical City was upgraded once again, astonishingly allowing for direct airborne flight...

So many major events, all happening in less than a week, were already tight enough.

Now, all was condensed into that single Spiritual Energy information, received by Tang Xiaomei in an entire rush.

Various images and sounds made Tang Xiaomei feel as if she was on site, overwhelmed, her mind blank, and with no spare time to think of anything else.

It was a long time before she finally came to her senses, and then she suddenly felt something amiss, quickly glancing at the time: "Ah! So much time has passed!"

Tang Xiaomei discovered she had been immersed in that information for more than half an hour!

She instantly felt a sense of imminent disaster.

Because Su Yu asked at the end of the information if she would like to join the Mechanical City to develop the whole Ruins Star and prepare for the final battle.

Facing this invitation, she naturally was willing.

After all, Su Yu had just saved her life not long ago, so joining the Mechanical City and working for Su Yu, even out of gratitude, was quite reasonable.

Moreover, she felt that joining the Mechanical City might not even count as repaying anything.

She thought, with her current strength, she would be unable to repay Su Yu for anything; on the contrary, she needed Su Yu's protection.

The enemies are becoming increasingly terrifying, with crisis after crisis; she herself felt that staying in Beihan City was somewhat untenable, as it was too dangerous for a seven-star Transcendent to stay here, and nobody would know when she would die.

Now that Su Yu invited her to join the Mechanical City, she naturally was eager to accept.

But, even though she was willing to join the Mechanical City, she had "left" Su Yu waiting for so long.

Would Su Yu misunderstand or get upset with her?

Tang Xiaomei was very anxious and restless.

She quickly used Spiritual Energy to send out a voice: "Lord Su Yu! Just now I was so absorbed in the information that I didn't reply in time."

"Lord Su Yu, please don't misunderstand. I definitely am willing to join the Mechanical City..."

Her tone was very tense, even submissive.

Originally, her personality was somewhat fiery.

Previously, when Su Yu first joined the Transcendent Union, because Tie Long leaked information about the union to Su Yu, Tang Xiaomei argued with Tie Long at the meeting, sarcastically mocking him.

But now Tang Xiaomei's tone was like that of a student who had made a mistake.

In fact, her mindset was indeed like that of a student who had made a mistake.

After all, with Su Yu being a mysterious master of ancient revival, powerful and enigmatic, how could she not feel like a student in front of Su Yu?

Su Yu felt slightly awkward upon hearing her voice.

The specific age of Tang Xiaomei was unknown, but surely she was much older than Su Yu.

Previously, Xie Yitian also asked Su Yu to call him "Little Xie."

Everyone was acting like a junior in front of Su Yu, making Su Yu feel like he had aged.

There was no way around it; the act of being a grandmaster was too successful, and now it had to be maintained.

Chapter 525: Devouring Beihan City, Melting! The Mysterious Ice Tower!_2

Who knows, if Su Yu tells them the truth now, saying he's actually just in his twenties, would they believe it?

These unreliable thoughts spun around in Su Yu's mind, then he spoke up: "City Lord Tang, don't worry, just wait for a mere half an hour, it's nothing."

"Since City Lord Tang is willing to join the Mechanical City, there's no time to lose. Let's have the Mechanical City absorb the population and resources of Beihan City now."

Tang Xiaomei, upon hearing this and seeing that Su Yu wasn't blaming her, immediately breathed a sigh of relief.

"Mr. Su Yu is indeed an ancient master, won't even stoop to the level of bickering with a girl like me. Tsk tsk, though he's an ancient big shot, he looks so young and handsome, not at all like some old senior..."

Tang Xiaomei thought two random things to herself, then quickly said: "Mr. Su Yu, please proceed as you wish."

"I'll notify the city residents immediately to be prepared."

After saying this, Tang Xiaomei promptly activated the information devices in Beihan City to broadcast to the whole city.

Soon, the entire Beihan City was bustling with activity.

After all, they were living well, and suddenly hearing City Lord Tang Xiaomei say that a powerhouse named Su Yu from afar had established a flying city, which was coming to swallow Beihan City?

How could such a thing be possible?

Moreover, City Lord Tang Xiaomei was telling them to be ready to join the Mechanical City?

With City Lord Tang Xiaomei's strength, she would actually join another city and submit to someone else's leadership?

The residents of Beihan City were somewhat disbelieving.

They suspected that City Lord Tang Xiaomei might have encountered some problem while cultivating spiritual energy, becoming mentally deranged and speaking nonsense.

However, due to Tang Xiaomei's authority, they still grudgingly made some preparations.

They made up their minds that if they didn't see any flying city later,

they would then consider whether to find a way to treat City Lord Tang Xiaomei's mental issues.

After all, she seemed to be quite unwell...

Just as they were thinking wildly and discussing fervently, they suddenly felt a shadow overhead, then saw the Mechanical City, which had disabled its invisibility, descending from the sky.

Immediately, Beihan City became even more lively...

Everyone who witnessed the Mechanical City descend from the sky was astonished. The people of Beihan City were naturally no exception.

Now, they no longer doubted Tang Xiaomei's mental state.

They began to wonder if something was wrong with themselves, how could such an illusionary realm appear in broad daylight?

No, even in dreams, they hadn't dreamt of such an absurd scene, right?

Until countless mechanical arms from the Mechanical City descended, lifting the residents of Beihan City onto the Mechanical City.

Seeing the scenery on the Mechanical City, they finally recognized reality.

It wasn't an illusion or a dream, but reality!

There really was such a Sky City, a Miracle City!

And now, they had become residents of such a Miracle City?

How could they believe it? It was too sudden!

All that can be said is that reality is sometimes more bizarre than a dream.

"Who knows, what kind of person is Lord Su Yu who created such a Miracle City?"

Upon understanding reality, these residents of Beihan City were filled with immense curiosity and awe towards the unseen Su Yu.

At the same time, they also understood why City Lord Tang Xiaomei chose to join Mr. Su Yu's ranks...

While the residents of Beihan City were questioning their lives, the Mechanical City had already begun to devour Beihan City.

However, this time, the Mechanical City wasn't quite satisfied with its 'meal.'

Because there was too little of Beihan City that could be 'eaten.'

The materials of most buildings were worthless solid ice.

After being swallowed by the Mechanical City, they were slightly refined in the Melter and evaporated as steam.

Only some technological equipment on the buildings gave it a feeling of having eaten.

Those things were the resources it could absorb.

However, these resources were too few in Beihan City.

Most of the city's material must be the buildings.

The remaining technological creations only accounted for a small part.

Finally, after the Mechanical City devoured the entire Beihan City, it felt completely unsatisfied, as if still a little hungry.

"Master, can we not eat this kind of thing next time..."

The Mechanical City couldn't help but complain to Su Yu.

Upon hearing this, Su Yu could only smile and comfort: "Heh, never mind it, treat it as just having a popsicle..."

At this time, Su Yu was in the "stomach" of the Mechanical City, which was a series of massive Melters capable of liquefying the hardest alloys into water, then casting them into parts of the Mechanical City.

The entire Beihan City was turned into steam here.

However, not all of the buildings made of the solid ice of Beihan became steam.

There was one structure, impassive in the Melter of the Mechanical City, no matter how it was melted, there was not a single change.

Yes, it was the mysterious Ice Tower where Tang Xiaomei used to cultivate.

This Ice Tower must be an ancient relic capable of creating an Absolute Zero Extreme Ice Space.

Even the "digestive system" of the Mechanical City seemed unable to melt it.

No!

Su Yu soon discovered that this Ice Tower was melting, but the melted portion was too small to be noticeable.

Moreover, Su Yu keenly sensed that as this Ice Tower melted, a strange aura began to emanate from it.

Su Yu carefully perceived this aura, pondered for a moment, and then ordered the Mechanical City: "Increase the power, melt this Ice Tower completely."

At this moment, Tang Xiaomei also came here.

She stood cautiously beside Su Yu, watching the Ice Tower melt in the Melter, and finally couldn't help saying: "Lord Su Yu, can we not melt this Ice Tower? I still have use for it..."

This Ice Tower was key to her cultivation as an Extreme Ice Agent, and if it were destroyed, it would be hard to find another one.

Upon hearing this, Su Yu glanced at her: "Call me Mr. Su Yu, not Lord... this Ice Tower has an extraordinary origin, containing great secrets. If it's thoroughly researched, I believe you'll immediately be able to ascend to eight stars, even hope for nine stars."

Su Yu wasn't making empty promises, but from the strange aura of the Ice Tower, he sensed something.

Upon hearing this, Tang Xiaomei immediately corrected herself: "Please, Mr. Su Yu, don't be polite, research it thoroughly!"

Compared to the hope of ascending to eight stars or even nine stars, this mere Ice Tower was nothing.

Su Yu nodded and continued watching the Mechanical City refining the Ice Tower.

A day passed, and only halfway of the Ice Tower was melted.

The strange aura emanating from the Ice Tower became even more pronounced.

During this day, the residents of Beihan City had already been settled in the Mechanical City.

Now, the residents of the Mechanical City, apart from the initial few tens of thousands, included the entire populations of War City, Illusion City, Wind City, Holy Hidden City, and Beihan City.

The population had exceeded six million! It could even be considered a small country.

Such a large population far exceeded Su Yu's original design blueprint; simply put, there weren't enough houses.

Fortunately, the Mechanical City was alive, growing some buildings as needed was enough to accommodate the extra residents.

To this point, the entire Transcendent Union—be they seven-star Transcendents or ordinary residents...

All had been taken by Su Yu into his fold, becoming part of the Mechanical City!

It's only been one or two months since Su Yu joined the Transcendent Union!

Thinking of this, Tie Long, Xiao Shengyin, and others had mixed feelings.

Several dozen days ago, when Su Yu attended his first gathering, who amongst them would've thought that one day they'd all be gathered under Su Yu's command, living in the same city?

Seeing those familiar residents in the Mechanical City, these seven-star and eight-star Transcendents were filled with deep emotions.

But Su Yu himself, he didn't have so many feelings.

He was currently focused on studying that Ice Tower.

By now, the Ice Tower had almost completely melted.

Only a core remained, unmoved in the Melter of the Mechanical City, with no signs of melting, no matter how much power the Mechanical City increased.

That core was a mechanical device ten meters high, with indicator lights faintly flickering, exuding a strange aura.

Su Yu immediately activated the Holographic Perception, and he saw:

[Subspace Analyzer]!

Chapter 526: Research, The Mysterious Subspace Analyzer!

"Just as expected!"

When Su Yu saw this machine, he immediately showed an expression of excitement.

Earlier, while rescuing Tang Xiaomei in Beihan City, Su Yu had analyzed and deduced that the Extreme Ice Space was a Subspace Simulator.

In the Extreme Ice Space, all matter comes to a halt, and time stands still.

However, intangible, abstract thoughts and emotions can still operate.

This phenomenon is very similar to subspace and is extremely valuable for research.

Thus, using the Absolute Zero of the Extreme Ice Space, one can simulate subspace and study the mysteries of subspace and the Evil God.

However, Su Yu believed that just Absolute Zero alone shouldn't be able to simulate subspace.

There must be many complex technical details involved. It's not just about bringing the temperature down to Absolute Zero; that would be too easy.

Therefore, Su Yu had long concluded that deep within the Ice Tower, there must be a core device.

That device is the real Subspace Simulator, with the Ice Tower merely being its shell.

However, at that time, although Su Yu had analyzed these internal matters, he temporarily set them aside because he was busy heading to Holy Hidden City.

Until now, when the Mechanical City devoured the Ice Tower, Su Yu finally had the opportunity to truly study it.

Su Yu's research this time could be considered quite "violent."

He directly activated the Melter of the Mechanical City at full power, melting the Ice Tower to reveal the core machine within.

In truth, Su Yu originally didn't want to be so violent.

If the process of melting the Ice Tower damaged the core, it would be a disaster.

However, when the Ice Tower first began to melt, the strange aura it emitted made Su Yu, an eight-star Extraordinary Mechanic, have a slight perception.

He confirmed that within the Ice Tower, there was a highly advanced piece of machinery.

The essential level of this equipment was so high that even Su Yu's mechanical instincts felt a bit trembling upon sensing that aura.

That piece of equipment definitely exceeded nine stars!

This kind of machinery that exceeds nine stars, as long as it is in normal condition, certainly cannot be destroyed by the Mechanical City's Melter.

So Su Yu immediately had the Mechanical City operate the Melter at full power to melt the Ice Tower!

Although it was still somewhat risky.

Because that device, after all these years, might already be nearing damage, and if subjected to the Melter now, it might just break completely.

But Su Yu still took this risk.

After all, even Zhang Chenfeng's creations risked violating the supreme directive to bring down trials and give him the green light, allowing Su Yu to create the flying Mechanical City.

It was clear that the situation was already very urgent, with little time left.

Given that, take the risk.

Fortunately, everything went smoothly. After a day of melting, the Ice Tower completely dissolved, and the equipment was fully exposed.

Moreover, its casing did not suffer any damage.

Far from damaged, its surface didn't have a single scratch, looking brand new as if it had just come off the production line.

It stood ten meters tall, squared, and its surface had a silvery-gray metallic sheen, very smooth, like a mirror.

Apart from that, there were no seams or interfaces on its surface.

At first glance, it simply looked like a solid block of steel.

If not for Su Yu's mechanic instincts being excited and cheering.

He wouldn't be able to determine whether this thing was a Mechanical Creation.

For Su Yu's mechanic instincts to be so thrilled, the tier and technological level of this machine far exceeded Su Yu's knowledge.

Thus, the mechanic instincts were excited, looking forward.

Such an advanced piece of machinery, Su Yu had never come into such close contact with one before.

Who knows what kind of knowledge might be gained from researching it? What kind of blueprints could be developed?

Most importantly, this equipment is intended for the simulation and study of subspace and the Evil God.

Through research on this device, more profound secrets about subspace are surely to be discovered.

No matter what is gained, it will surely be immensely beneficial to Su Yu.

For a Transcendent of his level, knowledge is power, and the most formidable power at that.

And now, within this machine lies a wealth of mysterious knowledge, originating from the knowledge of the Human Empire of ten thousand years ago!

Su Yu took a gentle breath, calming his excitement, and cautiously approached this device.

At this moment, he was incredibly vigilant, with his power elevated to its peak.

Meanwhile, the Mechanical City had already deployed all its energy, laying down heavy shields to tightly encase the area, to prevent any danger.

Because Su Yu worried about whether this mysterious device had any defense mechanisms.

With the level of this machinery, if it could launch an attack, it would undoubtedly be earth-shattering.

Although it had been subjected to a whole day of melting, it hadn't made any movement, seemingly having no aggression.

But he still had to be cautious.

Luckily, when Su Yu finally approached the device and touched it personally, it still did not make any movement.

Only then did Su Yu relax.

He looked at the [Subspace Analyzer] before him and fell into deep thought.

"So it's not called a Subspace Simulator, but an Analyzer, huh?"

"What a pity, only a name without more information."

Su Yu whispered to himself.

Regarding this machinery, the holographic perception provided very little information.

Only the name [Subspace Analyzer].

As for other information like level, manufacturer, function, damage degree, etc., there was none.

This made Su Yu feel a bit regretful.

In his past research on mechanical equipment, he would always first use holographic perception to take a look.

Chapter 527: Research, The Mysterious Subspace Analyzer!_2

Through the information provided by the Profession Panel, a lot of useful intelligence can be analyzed.

But now, this device actually prevents the usually invincible Profession Panel from providing any further information.

Su Yu touched the device with his hand, sensing the strange aura it emitted.

This aura, besides triggering Su Yu's Mechanic instincts, did not carry any other information.

"Interesting!"

Su Yu's eyes sharpened, and he activated his abilities.

He unleashed his Spiritual Energy as an Eight-star War Mechanic to try to invade and control the device.

Invading and controlling machinery with powerful spiritual power is the hallmark of a Mechanic.

Su Yu often used this ability while researching various machines in the past.

He could sense the internal structure of machinery without damaging it and analyze its principles.

This method had always been successful.

However, this time, Su Yu failed.

Because he found that his power couldn't penetrate it at all!

This device is incredibly solid, resisting any force's invasion.

Su Yu exerted his ability with full force, but after ten minutes, the Subspace Analyzer remained motionless.

During these ten minutes, Su Yu used almost every Mechanic technique he knew.

But it was all to no avail.

"I refuse to believe this!"

Su Yu refused to believe it, abandoning his Mechanic abilities.

This machine is so sturdy, it would be rude not to just take it apart by force!

He used all sorts of powers like the Ghost Hidden Blade and the Heavenly Punishment Evil God's abilities.

Bang!

Su Yu unleashed his power, striking the Subspace Analyzer fiercely.

However, it remained unscratched, incredibly sturdy.

Su Yu did not stop, instead, he even used the power of the Brutal Battle Armor!

He even activated the Overload function of the Brutal Battle Armor.

At this moment, except for not activating the Overload Form of the Brutal Battle Armor, Su Yu was almost at full strength.

He was practically in the same condition as when he fought the Giant God earlier!

Boom, boom, boom!

Su Yu attacked the ten-meter-high steel block with superfast speed and immense strength, trying to break through its exterior.

The entire Melting Furnace Space was already devoid of Su Yu's figure, only endless terrifying force continuously erupting.

With Su Yu's attack, the temperature in this Melting Furnace Space rose rapidly. In a short time, it reached millions of degrees and continued to rise.

This temperature far exceeded the surface of the sun, approaching tens of millions in the Sun Core!

The air here was no longer gaseous but had been ionized by high temperature into a hot, dazzling plasma!

If it weren't for the Mechanical City using all its strength to set up a protective shield around, once the power spilled over, the whole Mechanical City would likely suffer countless casualties.

With the Mechanical City at a nine-star level and its enormous size, coupled with the recently upgraded Energy System.

It was able to block the residual impact of Su Yu's outburst, preventing it from injuring others.

But because of the shield preventing energy from spilling, unlike previous trials, this time the energy explosion was confined within a small space, with all the energy accumulating.

The resulting terrifying temperature was even more fearsome than Su Yu's actual attacks.

If Su Yu could continue attacking, the temperature here might exceed the Sun Core, reaching billions of degrees, directly triggering nuclear fusion to create a small sun!

Su Yu's power at this time was not far from that of a large-scale nuclear bomb, unleashing nuclear fusion with bare hands was hardly unimaginable.

However, after a few seconds of attacking, Su Yu had to stop unwillingly.

The surrounding temperature also rapidly decreased.

There was no choice, it was too hot here, Su Yu himself couldn't withstand it, and after a few seconds, he was about to vaporize.

Continuing would be suicide.

Even his Brutal Battle Armor vaporized some of its surface layer, absorbing a lot of heat, or Su Yu would have been injured.

As the temperature dropped, the surrounding air transformed from a blazing white plasma back to a transparent gas.

Su Yu looked again at the Subspace Analyzer and found it still unmoved, without a scratch.

"What material is this thing made of?"

Su Yu was at a loss.

This machine was too solid, too tough.

With the power of Su Yu at a nine-star level, hitting it didn't even leave a scratch, it was ridiculous.

And when Su Yu was displaying his mighty power, in a corner of the Melting Furnace Space, a figure was shivering.

It was Tang Xiaomei.

Earlier, when Su Yu erupted, the Mechanical City diverted some energy to protect her. Coupled with her proficiency in low-temperature abilities, she was unharmed but thoroughly frightened.

She initially thought Su Yu was going to study this machine with sophisticated Mechanic techniques.

Who would have thought, it turned out to be so violent?

She witnessed up close a full-power outbreak of a nine-star level, the impact it left on her was unimaginable.

"As expected of Mr. Su Yu! Just the shockwaves through the shield almost roasted me..."

"Seeing Mr. Su Yu's power display up close is far more shocking than any virtual scene before."

"Speaking of which, is the difference between seven-star and nine-star really this big? I feel like Mr. Su Yu could squash me with ease..."

Tang Xiaomei nervously thought as she saw Su Yu stop his attack.

At this moment, the helpless Su Yu noticed Tang Xiaomei in the corner.

He hesitated and said, "City Lord Tang Xiaomei, why don't you give it a try?"

Tang Xiaomei was a bit surprised: "Me?"

With such a spectacular display by Su Yu, yet ineffective against this strange machine, what could she possibly do?

Su Yu nodded, "Your ability is closely related to this machine. Give it a try with your power."

Tang Xiaomei hesitated, then nodded slowly, and walked up to the Subspace Analyzer, placing her hand on the machine.

The touch was cold, the millions of degrees of heat earlier didn't even warm it!

This thought had just passed through Tang Xiaomei's mind when her heart suddenly raced, feeling as if a call was coming from deep within the machine.

She sensed that the breakthrough opportunity she had sought for years was right within this device!

"No wonder Mr. Su Yu mentioned earlier that studying the Ice Tower could help me break through to eight-star..."

An excited Tang Xiaomei unleashed the Extreme Ice Agent's power.

Hiss...

The surrounding temperature dropped rapidly.

Seeing this, Su Yu instructed the Mechanical City to assist in cooling the surroundings.

Soon, the area around the Subspace Analyzer dropped to over two hundred degrees below zero, and it continued to decline.

Tang Xiaomei intended to probe the device with extreme cold.

After all, this thing had been sealed in the Ice Tower before.

Using cold to test it now seemed logical.

However, despite the very low temperature, the device still showed no reaction.

Tang Xiaomei continued to cool down.

As a Seven-star Transcendent, she didn't have the ability to truly lower the temperature to Absolute Zero.

So, when the temperature dropped to the limit, just a fraction from absolute zero, she couldn't go any lower.

And that device still showed no reaction.

Tang Xiaomei tried for half an hour, exhausting herself, without making any headway with this machine.

Frustrated, she could only look to Su Yu for help.

Su Yu shook his head slightly, looking at me won't help, I have no way to deal with this iron box either.

"This thing is just like a black box, refusing to reveal any information."

Su Yu couldn't help but mutter to himself.

Who knows how this thing produces the Extreme Ice Space?

With no information revealed, how does it communicate with the outside?

Just then, Su Yu suddenly had an inspiration, a black box?

He was inspired and closed his eyes.

At the same time, using his strong self-control, he shut off his hearing, touch, smell... all senses.

Leaving only some internal sensations.

At this moment, Su Yu was blind and deaf.

He had no sensory capabilities towards the outside world, to him, everything outside vanished and ceased to exist.

Then, he started to step forward, walking towards the memory of the machine's location.

One step, two steps, three steps...

Su Yu walked dozens of steps; he should have already collided with the Subspace Analyzer.

However, he continued moving forward.

Next to him, Tang Xiaomei watched Su Yu walking towards the Subspace Analyzer, and then... just vanished right in front of her!

Chapter 528: Theoretical Research, The Essence of a Profession! Su Yu Wants to Create His Own Profession?!

"Mr. Su Yu, did you just walk into this machine?"

Tang Xiaomei was startled, looking at the Subspace Analyzer, somewhat uncertainly muttering to herself.

She was unsure because she didn't see clearly in that instant.

With her Seven-star Transcendent dynamic vision, she could see the trajectory of bullets traveling multiple times the speed of sound.

However, just now Su Yu walked slowly at the speed of an ordinary person, yet Tang Xiaomei felt she couldn't see clearly, unable to determine his position.

This was very strange.

It seemed that previously, Su Yu had already shifted into some peculiar state before walking into the Subspace Analyzer.

At the same time, the Subspace Analyzer's state at that moment was also strange. But Tang Xiaomei similarly hadn't seen clearly.

Tang Xiaomei wore a thoughtful expression, trying to recall, yet couldn't understand what had happened to Su Yu just moments before.

"This machine is really too mysterious, it's fundamentally beyond my comprehension."

"Thankfully, since Mr. Su Yu was able to walk in, he probably already discovered the secret of this machine."

"I might as well patiently wait."

In the end, Tang Xiaomei could only resign herself and quietly wait for Su Yu to come out.

...

Meanwhile, inside the Subspace Analyzer, Su Yu suddenly opened his eyes.

Simultaneously, he restored the perception he had previously sealed off.

"So this is the internal space of the Subspace Analyzer?"

Su Yu looked around, speaking to himself.

The surroundings were completely dark, but for Su Yu, such darkness couldn't block his vision, and he instantly saw the surroundings clearly.

He saw a closed space nearly ten meters high, sealed off in all directions by sturdy alloy plates, with no exits.

Judging from the volume here, this should be the interior of the Subspace Analyzer.

By the look of things, it seemed the Subspace Analyzer was just an iron box.

The inside was empty, with no mechanical structures, no functional facilities.

But how could this be possible?

How could such an iron box live up to the name of a Subspace Analyzer, how could it create an Extreme Ice Space, how could it simulate a subspace structure?

"Perhaps it's not nonexistent, it's just that I can't see it."

Su Yu surveyed around, speaking to himself.

He believed there must be precise mechanical equipment here.

However, the mechanical equipment here was in a very peculiar state.

Even with Su Yu's current power and rank, he couldn't see their presence.

Su Yu stepped forward again, walking a few circles around here, not encountering anything.

"Not only can't I see it, I can't touch it, either."

"It really is just like my earlier hypothesis, it's unobservable here."

"The outer shell, once observed, becomes incredibly sturdy, impossible to break forever."

"The internal equipment, on the other hand, is opposite to the shell. As soon as you intend to observe it, you can't interact with them."

"What is this...?"

"A transcendent version of Quantum Mechanics?"

Su Yu had already formed a rough hypothesis about the situation here.

He thought of a familiar physical term from his previous life: Quantum Mechanics.

Before crossing over, Su Yu wasn't exactly a physicist, but he had some understanding of Quantum Mechanics and the Observer Effect.

In Quantum Mechanics, without the observer's involvement, a quantum system can exist in a superposition of multiple possible states.

Once observed, it "collapses" into one of those definite states.

Su Yu conjectured that this Subspace Analyzer possessed such a trait.

Su Yu's past violent attacks couldn't damage the Subspace Analyzer's shell.

That was because Su Yu's observation caused the shell to collapse into an incredibly sturdy state.

However, after Su Yu sealed his five senses and stopped observing the machine, he was able to walk in effortlessly.

That was because he was no longer observing, and the shell transformed into another state, no longer barring his entry.

In fact, there were theories like Quantum Mechanics and Relativity during the time of the ruins too.

However, it's rare to find relevant materials, and hardly any creations utilizing these two theories were seen.

For example, a nuclear bomb using the mass-energy equivalence principle, Su Yu had never seen one.

As for creations related to Quantum Mechanics, like quantum computers? Su Yu hadn't seen them either. The intelligent chips he often used were, in a sense, spiritual energy creations, not related to Quantum Mechanics.

In this case now, it was Su Yu's first encounter, feeling very novel.

This was unlike any Evil God or Spiritual Energy, it was because of physical phenomena he felt a sense of novelty.

This instantly ignited Su Yu's curiosity and thirst for knowledge.

Speaking of which, living in this world for so long, Su Yu learned a lot of advanced scientific knowledge.

A large part of this knowledge was inherently acquired from various Extraordinary Professions he was employed in.

For instance, after becoming a Data Mechanic, Su Yu naturally had a thorough grasp of a lot of information-related knowledge, as a matter of instinct, without needing explicit study.

There was also knowledge Su Yu learned through various channels. For example, when he first joined the Transcendent Union, Su Yu gained a lot of knowledge about subspace at the meeting.

Other knowledge, Su Yu derived from researching various machines.

With his Extraordinary Mechanic abilities, taking apart a piece of mechanical equipment was easy for him to sense its principles and learn new knowledge from it, developing new blueprints.

With Su Yu's rate of thought, he had accumulated within a short time more profound knowledge than an ordinary person could learn in a lifetime.

Chapter 529: Theoretical Research, The Essence of Profession! Does Su Yu Want to Create His Own Profession?!_2

As an eight-star Extraordinary Mechanic, Su Yu is undoubtedly among the most knowledgeable on this planet.

However, most of Su Yu's understanding lies in areas related to mechanics, spiritual energy, combat, data, subspace...

Regarding physical theories like Quantum Mechanics and Relativity, which involve the underlying rules of the world, Su Yu knows very little.

In fact, most of his knowledge of these two theories was learned before he crossed over, during his school years.

In this world, he rarely encounters these two theories.

In his usual crafting of various mechanical devices and combat, these theories are unnecessary.

If not for the books he had read previously mentioning these theories briefly,

Su Yu would have doubted whether this world with spiritual energy, subspace, and evil gods truly has things like Quantum Mechanics and Relativity.

But now, Su Yu is certain, they exist!

At least Quantum Mechanics does!

Evidently, this Subspace Analyzer utilizes the observer effect from Quantum Mechanics.

"This is truly interesting."

Su Yu looked around the empty surroundings and gradually became excited, feeling that this research on the Subspace Analyzer is indeed on the right track!

Although there was nothing around, Su Yu's mind was already running at high speed, speculating on how this Subspace Analyzer utilizes the observer effect of Quantum Mechanics.

Firstly, Su Yu confirmed that this Subspace Analyzer is definitely not a pure physical creation, it also employs spiritual energy technology.

"Spiritual energy, spiritual energy... This energy is an abstract thought and emotion, which, after aggregating and transforming in subspace, becomes a magical force that can affect reality."

Su Yu murmured to himself.

"Spiritual energy can influence reality and cause various physical phenomena."

"Using spiritual energy, one can summon wind, thunder, water, and fire, manipulate objects out of thin air, grant ordinary people immense strength far beyond normal, and other extraordinary abilities."

"But these phenomena seem to occur under macroscopic, low-speed conditions."

Su Yu recalled that no matter how powerful he became, he was actually still within the macroscopic and low-speed range.

No matter how strong he was, he could not shatter atoms or penetrate the internals of matter.

Even the ability of data manifestation, which could directly materialize matter using data, was merely superficial.

It is impossible to truly materialize the atoms of matter, so things manifested by data are far inferior to real matter.

Similarly, no matter how fast Su Yu was, at most reaching a hundred times the speed of sound, it was still too slow compared to light speed, belonging to the low-speed domain.

Macroscopic, low-speed, this is Su Yu's summary of his own strength.

This only accounts for the impact on real matter, not abstract things like mind, memory, or data.

From this perspective, although Su Yu is powerful, his influence on the real world is still very superficial, only surface-level.

Su Yu did not feel frustrated because of this, after all, he is still just a third-tier transcendent, with a long way ahead of him.

"But if spiritual energy becomes strong enough, could it not influence physical phenomena at high speeds and microscopic scales?"

"The mass-energy conversion of Relativity, time dilation and length contraction, involving time, space, energy, and matter."

"The microscopic Quantum Mechanics is even more wondrous, with matter existing in the state of quantum wave functions, collapsing under observation."

"If spiritual energy becomes powerful enough to influence the physical phenomena involved in these two theories..."

Su Yu tried to imagine what would happen if spiritual energy could influence these two theories.

Then, he thought of a certain fellow, Qiu Mo!

Qiu Mo developed the Time Drifter, a fourth-tier profession, claimed to possess the power of time.

And time, in the material world, cannot be understood without Relativity and Quantum Mechanics.

For Qiu Mo to master the power of time, he surely has to influence the physical phenomena involved in these two theories.

"Could it be that the fourth-tier profession uses spiritual energy to influence the high-speed, microscopic physical phenomena involved in these two theories,"

"thereby gaining more powerful and extraordinary powers, like time and space?"

Su Yu felt like he had unraveled some secrets of the fourth-tier profession.

He always felt that Qiu Mo developing the Time Drifter, trying to grasp the power of time, seemed a bit too outrageous.

But now it seems Qiu Mo is not so far-fetched after all.

Not to mention, Qiu Mo has not succeeded yet.

"In this light, if I keep researching, I might also develop my own fourth-tier profession?"

Su Yu felt slightly invigorated.

He even had the notion of developing his own fourth-tier profession, creating his own path!

Originally, he had no clue how to develop a profession of the Time Drifter's level.

He could not comprehend the principles at all.

But now, he at least had some theoretical foundation, some direction.

"Unfortunately, my understanding of Quantum Mechanics and Relativity still remains at the textbook level from before I crossed over, I have never delved deeply into them."

Though Su Yu felt invigorated, he quickly faced reality.

The fourth-tier profession and the power of time are not easy to research.

Before crossing over, he didn't delve deeply into these theories, and now on the Ruins Star, it is also difficult to find relevant textbooks and materials.

"Besides, ten thousand years ago, the Human Empire was highly advanced."

"Quantum Mechanics and Relativity might not have been the most cutting-edge theories in the Human Empire back then."

"There must have been more profound and advanced theories truly involving the essence of the Universe and even subspace."

"By researching these profound theories, it's possible to develop more powerful and mysterious transcendent professions and mechanical creations."

"But unfortunately, those theories are most likely lost on the Ruins Star."

"Now, even Quantum Mechanics and Relativity are hard to learn."

Su Yu sighed softly to himself.

Up to now, all of his professions have been through the profession panel.

Those professions were ready-made; he just needed to take them up.

However, Su Yu was not satisfied and wished, like the Human Empire ten thousand years ago, and like Qiu Mo now, to develop his own professions.

If others can develop new professions, why can't Su Yu?

Those professions would definitely be in perfect harmony with Su Yu, allowing him to exert even greater power.

And no one would know the information about this new profession, making it even more enigmatic and unpredictable.

Su Yu's current transcendent professions are all remnants from the Empire ten thousand years ago.

Back then, when the Brutal Evil God fought against Zhang Chenfeng, he must have known these professions thoroughly.

Even when Su Yu took up the Ghost Hidden Blade, the Brutal Split Mind knew exactly what the ceremony required.

Su Yu thought that for a possible decisive great battle in the future, he would be best off developing a new, powerful profession to serve as some unknown trump card, not relying entirely on the Empire's remnants.

But unfortunately, Su Yu's knowledge reserve is insufficient; even if he wants to develop one, he does not know where to start.

"Zhang Chenfeng's creations surely possess related knowledge. If I could obtain these theoretical insights from them, it would be ideal..."

"Also, Qiu Mo must have some theoretical foundation to develop the Time Drifter, I should find a way to extract this knowledge."

"And the location of the Giant God Soldiers, there might also be relevant knowledge left there."

Su Yu quickly thought of three ways to acquire knowledge.

Among them, Zhang Chenfeng's creations are probably not an option for now.

Those beings are limited by supreme orders, with very low freedom, and cannot impart knowledge to Su Yu.

There's also Qiu Mo, who appears and disappears without a trace; no chance for now.

Su Yu plans to visit the base of the Giant God Soldiers soon.

Actually, there's one more way, which is... the Subspace Analyzer right in front of him! It itself represents knowledge!

Su Yu looked at the empty Subspace Analyzer and once again closed his eyes, cutting off his senses, making himself no longer the "observer."

Thus, quickly, some incredibly complex mechanical creations appeared around him out of thin air...

Chapter 530: A Risky Attempt

The mechanical creations that appeared around Su Yu were very peculiar.

Their forms were constantly shifting, flickering incessantly, never settling into a fixed shape, resembling some sort of virtual projection or mist.

However, Su Yu couldn't see any of this, for he had completely shut off his perception of the outside world and could neither see nor hear anything.

"Now with no observers, the internal structure of the Subspace Analyzer should be revealed, right?"

"I wonder, what do they look like? What functions do they serve?"

"But, I can't see them at all, what should I do?"

In the absolute darkness and silence, Su Yu mused to himself.

He was in a bit of a quandary; it seemed the situation had reached a deadlock.

As long as he opened his eyes, the structure of the Subspace Analyzer wouldn't appear before him.

What to do about this?

Su Yu did not become anxious; instead, he quietly contemplated.

At this moment, having closed off all five senses, the absolute darkness and silence made his thoughts exceptionally calm and clear.

Very soon, an inspiration struck him, and he thought of a possibility!

"The Subspace Analyzer is a Spiritual Quantum State."

"However, my body is in a normal material state; the two aren't even in the same dimension. Under normal circumstances, I can never really observe them."

"If I could somehow transform myself into a Quantum State as well, could I perhaps shed the role of the observer and view them from a different perspective?"

The plan Su Yu thought of was to transform himself into a Quantum State too!

Would this count as 'if you can't beat them, join them'?

Such an idea was a bit far-fetched and could come with tremendous risks!

Moreover, Su Yu only had a bit of inspiration but no clue on how to actually transform himself into a Spiritual Quantum State.

There was also no theoretical basis to support this idea; it was purely a figment of his imagination.

After all, Su Yu's understanding of the profound field of Quantum Mechanics was extremely superficial.

Not to mention, incorporating Spiritual Energy into Quantum Mechanics made it even more perplexing. Even a real expert in Quantum Mechanics would probably scratch their head.

Fortunately, although Su Yu wasn't a physicist, he was a powerful Transcendent.

In the world of the Transcendent, as long as you dare to imagine, anything is possible.

A monster like the demon even dared to target the Power of Time.

Su Yu also possessed nine-star strength, so what wouldn't he dare to imagine?

"First of all, it's certain that inside the Subspace Analyzer, there's an environment that maintains a certain Spiritual Quantum State."

"Now that I've stepped in, my body should be affected by this environment as well."

"But why hasn't my body transformed into a Quantum State?"

"Is it because my perception hasn't been completely closed off, still maintaining 'observation' of the body's interior?"

After determining the path, Su Yu quickly formulated a plan.

He believed that the interior of the Subspace Analyzer already hosted a Spiritual Quantum State environment.

Even if he did nothing, his body would transform into a Quantum State.

Right now, the transformation hadn't occurred because his perception hadn't been thoroughly closed off.

Although Su Yu had shut off his perception of the outside world, he was still maintaining perception of his internal body, which also counted as observation.

But now, Su Yu decided to shut off even the perception of his body's interior!

However, Su Yu did not immediately proceed with the plan.

"Wouldn't this be dangerous?"

"No! It will definitely be dangerous!"

At this moment, Su Yu felt extremely heavy-hearted.

Because he understood that if he truly shut off all his perception, it would inevitably lead to extremely serious consequences.

Even losing the body, leaving only the Spiritual Body, meant that there was still self-perception.

But now, Su Yu wanted to shut off all perception of himself!

Perception is the anchor of the spirit.

If all perception of the external world, oneself, Spiritual Energy, Subspace... were shut off.

What would happen then?

That would be equivalent to death!

"So, am I committing suicide?"

Su Yu hesitated slightly.

Isn't this too risky?

Even without this attempt, just by slowly enhancing his power, relying on the Profession Panel, his strength would still rapidly improve.

Is it worth it?

But after a brief moment, he solidified his resolve.

"Do it! There's no such thing as it being worth or not worth it!"

Su Yu decided to take the risk.

The attitude of Zhang Chenfeng's creations put quite a bit of pressure on him.

It made him realize that the situation was urgent, and he must enhance his power quickly.

However, even though Su Yu decided to take the risk, it wasn't entirely a gamble with his life.

Because he still had a trump card.

And that is... the Profession Panel!

This thing was extremely mysterious and powerful, so much so that even with Su Yu's current strength, he couldn't understand the origins and principles of the Profession Panel.

Su Yu was confident that even if he managed to shut off all perception, he couldn't shut off the Profession Panel.

If he couldn't find himself after shutting off all perception,

then the prompts from the Profession Panel would help him!

Su Yu mulled over this risky plan several times, found no issues, then decided to execute it.

First, Su Yu instructed the Fear Intelligence within the battle armor and the external Nuonuo to shut off perception and not observe the outside world.

This was because the Fear Intelligence on the Brutal Battle Armor and Nuonuo also counted as observers, which could cause interference.

After the Fear Intelligence and Nuonuo obediently "shut down," Su Yu proceeded in the next instant!

There was no sound, no movement, but Su Yu's self-perception was gradually disappearing.
