

Infinite 741

Chapter 741: Awakening

The Galaxy Battle Armor projected some holographic images for Su Yu to watch while narrating the events.

Su Yu first saw a ghastly white, semi-transparent entity, rapidly flitting through the air.

On the ground, numerous human soldiers were frantically firing at it, but to no avail.

That white shadow only needed to pounce on a soldier's body, and the soldier would collapse immediately, lifeless.

At the same time, the fallen soldier's body began to emit a ghastly white mist, as if another white shadow was being born from the corpse!

Finally, over a dozen Galaxy Battle Armors banded together, using powerful Spiritual Energy to forcibly drag that part of space into Subspace, temporarily trapping the white shadow, and then bombarding it with Spiritual Energy until it was obliterated.

These scenes depicted the battle between the Galaxy Battle Armor and a Deep Space Ghost at that time.

It was Su Yu's first time witnessing the battles of the Empire from ages past. He realized that the Empire consisted not only of powerful warriors above seven stars but also many ordinary soldiers.

Of course, these ordinary soldiers possessed some Spiritual Energy too, but since they were not above seven stars, they were considered ordinary.

These ordinary soldiers were all clad in Power Armor, wielding large-caliber Hot Melt Guns and Chain Swords, with formidable firepower.

Unfortunately, they faced a universe-level calamity, the nemesis of humanity, a Deep Space Ghost. Though there was only one, it was beyond their ability to resist.

The warriors fell one after another, and new Deep Space Ghosts emerged from their corpses.

Fortunately, the newly born Deep Space Ghosts were not as strong as the initial one, which the soldiers could barely resist.

But for that first one, they were entirely helpless.

The seven-star Galaxy Warriors did not rush to intervene, seemingly letting the ordinary soldiers buy time while they collected data and prepared a ritual.

Finally, under the planning of those Galaxy Warriors, they successfully dragged an entire space into Subspace, trapping the Deep Space Ghost.

At the same time, they also dragged many ordinary soldiers inside, dooming them.

Such brutal battle scenes made Su Yu's heart tremble; he hadn't expected that even during the Human Empire's golden era, the battles were so fierce and cruel.

However, it's no surprise; what war doesn't involve casualties?

No matter how strong the Empire was, it wasn't invincible in the Universe; victory required sacrificing lives!

Then the Galaxy Battle Armor switched to another scene.

This time, it was quite baffling; it was an empty void, with nothing in sight.

The Galaxy Battle Armor explained to Su Yu that this Star Region was obliterated by an Inorganic Alliance's planet-destroying weapon, reduced to nothingness. Even the planets were blasted into thin cosmic dust, with less than a hundred atoms per cubic meter, hence appearing empty!

Su Yu looked at the void, silent in contemplation. The technological prowess of this Inorganic Alliance was indeed terrifying!

Then, the Galaxy Battle Armor released the final scene.

Earlier, it was a Deep Space Ghost and the Inorganic Alliance.

Now, it was the Star Beasts!

In the dark void, a monstrous beast was hovering beside a beautiful blue planet.

The image marked the planet's size — a diameter of sixteen thousand kilometers!

Yet, such a massive planet seemed quite "petite" beside the beast.

The beast's size was terrifyingly immense, beyond imagination.

Its form was incredibly distorted, lacking symmetry, with its body surface covered in various twisted tendrils and limbs, resembling a mixture of a fish and an exotic insect.

The beast hovered beside the planet for a while, with ten eyes fixed intently on it, then suddenly opened its fang-filled mouth to devour the planet.

Inside its massive maw were spiraling giant teeth, forming rings that rotated and ground incessantly, seeming capable of pulverizing anything in their path, even a planet.

Before that, the beautiful planet had already suffered earthquakes and tsunamis due to the beast's gravity, with countless deaths and injuries.

As it began to open its mouth wider, the gravitational pull intensified, and even before it could bite down, the planet underwent a massive rupture due to the gravitational forces.

The entire planet was torn into two halves.

This planet, equipped with advanced technology and civilization, deployed numerous battleships in an attack on the beast.

But before the beast's terrifying size, these attacks were laughable, unable to inflict any harm.

They couldn't even approach the beast's body before being annihilated by a layer of energy on its surface akin to an atmosphere.

Facing this situation, the planet's inhabitants fell into utter despair.

Many spacecraft began to flee, but against the beast's suction, they were pulled backward instead, eventually swallowed whole by the beast.

Finally, the beast took a massive bite out of the planet, devouring most of it, leaving the remaining fragment to drift in the Cosmic Vacuum.

It chewed for a while, then opened its mouth again, swallowing the last remnant, appearing satisfied.

Then it turned its head toward the distance, seemingly setting its sights on another planet.

In the depths of the Universe, there were looming other gigantic figures, seemingly more of these beasts!

At that moment, a glance from the beast's eye seemed to detect the presence of the recording observer!

The footage ended there.

Su Yu watched, speechless for a long time.

After a while, he finally sighed, "This Universe is truly perilous!"

Chapter 742: Waking Up_2

Su Yu originally thought that the Evil God was the most dangerous thing in this Universe.

It turns out that the various alien species in this Universe are equally terrifying.

Moreover, these alien species are more than just one kind; the three types displayed by the Galaxy Battle Armor are just a small part of them.

So, even if Su Yu did break the blockade and head into the cosmic void, he would still face endless unknown dangers. He might just step outside and encounter Star Beasts or Deep Space Ghosts and be completely devoured.

"How wonderful..."

Su Yu suddenly smiled. Such a Universe is truly worth exploring!

The cosmic dangers did not frighten Su Yu; instead, they stirred his endless fighting spirit!

The Galaxy Battle Armor nodded slightly in its heart upon seeing Su Yu's smile.

It had now been freed from the constraints of its thoughts and was no longer the Empire's armor. At first, it felt a little lost and unsure of what to do next.

Now, it decided to follow under Su Yu's command, fighting for him and exploring the cosmic stars together in the future!

It was curious and had a fighting spirit, thinking that following someone like Su Yu might satisfy its desires?

"Next, I need to focus on research. Feel free to wander around the city."

Su Yu put away his smile and said to the Galaxy Battle Armor.

Then, he closed his eyes again and concentrated on his body.

He had not yet fully comprehended this Radiant Transformation, especially after learning that it was the power of the Radiant Forbidden Troops, which further motivated him to uncover its secrets quickly.

The Galaxy Battle Armor nodded and jumped down from Su Yu's palm, walking towards the city.

For more than ten days, Su Yu quietly studied the secrets of the Radiant Transformation.

His gigantic and magnificent figure has deeply impressed the people of Mechanical City over these days.

In these ten days, the newly joined settlement residents had completely integrated into the city.

Initially, within the first few days, they still felt homesick, but eventually, they stopped.

After all, the living conditions in Mechanical City were so superior. Compared to that, what kind of days did they live before? Was that even a life?

Naturally, they did not miss the past.

Although some people still felt nostalgic, which is understandable.

The million descendants of Mechanics Su Yu brought back were the same during these days.

These guys behaved like starved beasts, feasting every day during those ten days, and everyone gained a significant amount of weight.

The settlement residents also thought they had endured a long period of hardship, so they too feasted upon entering Mechanical City. But compared to these descendants of Mechanics, they were far behind.

The obsession these mechanic descendants had for food was as if they were crazy.

No matter what you asked them, they wouldn't answer, just kept eating and drinking as if they weren't worried about bursting.

With the large consumption of food, others started to grumble about these mechanic descendants, wondering what purpose Mr. Su Yu had for bringing these food buckets back.

Even Tie Long and the others were speechless.

Initially, Tie Long and the others wanted to inquire about the secrets of the Fusion People.

But these guys just stuffed food in their mouths, refusing to answer questions, leaving no other choice.

Fortunately, everyone soon discovered the usefulness of these guys.

Because on the seventh day, these guys finally stopped their binge eating, even if just barely.

Not because they had eaten enough, but because there wasn't enough food.

Actually, there was enough food in the city to last for a year or two without issue.

But Tie Long and the others subtly reminded this bunch that food was limited since their eating could consume a year's worth of food in just two or three months.

Their concern was justified.

These mechanic descendants felt embarrassed upon hearing about the food shortage and voluntarily offered to work in exchange for food.

Tie Long and the others initially intended to refuse but quickly realized that these guys were, on average, skilled Extraordinary Mechanics!

Among them were even veteran mechanics of nine-star level capable of crafting nine-star machinery!

Upon this discovery, everyone was overjoyed.

Originally, Su Yu was the only one in the entire city capable of crafting mecha above seven stars.

Su Yu was very busy every day, and though Tie Long and the others wanted Su Yu's help in crafting mecha, Su Yu had no spare time, so they had no choice.

With so many mechanics suddenly appearing, there was no need to trouble Su Yu anymore; they could directly hire these people!

Of course, Tie Long and the others did not plan to have these mechanics create mechas, as Su Yu clearly had a plan, and they were concerned that crafting mechas might conflict with Su Yu's plans.

They asked these mechanics to custom-make weapons and other equipment for them instead.

These weapons and equipment could significantly improve their strength.

Tie Long and the others immediately brought out their treasured materials and asked these mechanics for their help.

Tie Long even asked them to help modify his own body.

These mechanics were willingly obliged, working with great skill, and they didn't require any payment, just meals.

Of course, while the mechanics didn't ask for it, Tie Long and the others did provide ample energy coins.

Soon, the reputation of these mechanics spread like wildfire.

A million mechanics suddenly made the entire Mechanical City boil with excitement.

They deeply understood the importance of mechanics!

In the past, in their settlements and cities, any mechanic was a valuable talent with a high status.

They couldn't fathom where Mr. Su Yu had found so many talents! And now, it was a million!

Soon, "orders" flooded in like a stream.

In recent days, these mechanics were busy crafting various mechanical devices.

Or performing transformations.

This was much cheaper than what was available in the exchange system.

Of course, the effect did not match the one from the exchange system, as those were Su Yu's creations.

Meanwhile, these mechanic descendants continued their feasting, even more so due to their hard work.

Now, Tie Long and the others had no complaints at all; such talent was so beneficial, what did eating and drinking a little matter?

However, under the binge eating of these guys, the city's food was rapidly consumed.

With a million big eaters operating at full capacity every day, who could withstand it?

So, on this day, Tie Long and some mechanic descendants approached Su Yu, wanting to request permission to leave the city to gather food from the surface.

The city's food, aside from grain, much of it was meat products from purified Radiation Beasts, which were plentiful in stock, yet after such feasting, had been substantially depleted and urgently needed replenishing.

But previously, due to the matter of the Ghost Emperor, Su Yu had sealed the Mechanical City, preventing entry or exit, so they needed permission from Su Yu.

Upon sensing their arrival, Su Yu awoke from his research and opened his eyes.

"So many days have passed already..."

As soon as Su Yu woke up, he judged the time and discovered that he had immersed himself in research for over ten days!

Moreover, his transformation had not yet been undone.

This transformation lasted exceptionally long, possibly because he only researched without fighting or consuming energy, allowing it to be maintained for such a length of time.

But now he was approaching his limit.

Thus...

Boom!

Su Yu's figure rapidly shrunk, instantly reverting to his original size.

Simultaneously, his Giant God Soldier Mecha was retracted into the Manifestation Space.

He lifted the transformation.

During these ten days, with the combined efforts of himself and the Mechanical God, they had nearly uncovered the secrets of the Radiant Transformation.

In truth, some aspects remained unclear, as they pertained to Fifth Rank secrets, beyond Su Yu's current capability; he did not force it.

At least, the research findings now allow for continuous Sunshine Transformation, which is already sufficient for Su Yu's use.

However, it requires the Giant God Soldier Mecha to undergo another transformation and reforging, a complex task.

For now, he should see what Tie Long and the rest came for.

After deactivating his transformation, Su Yu looked at Tie Long and the mechanics' descendants, all with reverential faces, and couldn't help but smile.

Where did all these fat guys come from?

Just as Su Yu was about to speak, he suddenly displayed joy on his face.

Because... Nuonuo and Mechanical Spirit woke up at that moment, having advanced to the Fourth Rank!

Chapter 743: A Complete Transformation! The Three Great Mechanical Apostles!

Originally, Su Yu saw these Mechanic descendants gain weight in such a short time and wanted to tease them with a couple of jokes, but now he no longer feels like it.

His three major Mechanical Apostles have all awakened and completed their advancement to the Fourth Rank. Checking the status of these Mechanical Apostles is currently the most important thing.

How could he have any mood to tease others?

At this moment, with a thought from Su Yu, a sphere of interwoven ghostly green and pure white appeared before him—it was Nuonuo.

Nuonuo's machine color has changed again this time.

"This is..."

Seeing the pure white on Nuonuo's machine body, Su Yu was delighted and quickly opened his Holographic Perception to check Nuonuo's Attribute Panel.

[First Mechanical Apostle·Radiant Nuonuo]

[Creator: Su Yu]

[Race: Mechanical Life Form]

[Core Ability: Mechanical Evolution (As a mechanical life form you created, Nuonuo possesses infinite growth potential, and its power is linked to your own Spiritual Energy)]

[Skills:]

[Mechanical Fusion: Nuonuo possesses abilities beyond ordinary mechanical life forms, with a powerful Energy Core and energy field, capable of fusing with all Mechanical Creations... After advancing to ten stars, it can split its body and simultaneously fuse multiple Mechanical Creations, greatly enhancing their power. Current fusion quantity is 30!]

[Ghost Energy Field: As a Mechanical Life Form, Nuonuo has mastered the use of Ghost Energy through its connection with its master, possessing a special Ghost Energy Field. Any Mechanical Creations within the Ghost Energy Field, if in a damaged state, will quickly repair and be greatly enhanced by Ghost Energy.]

[Radiant Field: As a Mechanical Life Form, Nuonuo has mastered the use of the Power of Sunshine through its connection with its master, possessing a Radiant Field. Mechanical Creations within the Radiant Field will be greatly enhanced by the Power of Sunshine.]

[Mechanical Simulation: Even without Mechanical Creations, Nuonuo can use its own body to directly simulate various machines. The simulated machines can have up to Nine-Star strength. Limited by volume, it cannot simulate machines that are too large. Current simulation quantity is 30.]

[Mechanical Factory: Nuonuo's body, after multiple evolutions, has become extremely complex, achieving micro-level evolution. It can rely on its own body for mechanical production and manufacturing, currently able to produce at the highest rank: Nine-star Top Level! Total manufacturing quantity: Seven-star 100, Eight-star 50, Nine-star 30!]

[Comprehensive Strength Assessment: Ten-star Top Level]

Looking at Nuonuo's attributes, Su Yu showed a satisfied smile.

So powerful! The functions after Nuonuo's evolution are incredibly strong!

The original mechanical fusion function has evolved again.

Unexpectedly, it is estimated that the original Nine-star Top Level Mechanical Creations can be upgraded to Fourth Rank, ten stars!

As for Mechanical Creations that were originally Fourth Rank, they will become even stronger.

For example, Su Yu's Hell Mecha will certainly become more powerful after fusing with Nuonuo, and this fusion does not have the fatal flaw of the Mechanical Fusion Technology of the Mechanical God.

This kind of fusion by Nuonuo is its innate ability, though there is a quantity limit, but without such dangerous flaws, there isn't even a time limit!

And now, Nuonuo can simultaneously fuse 30 Mechanical Creations.

In other words, one Nuonuo can greatly enhance Su Yu's own strength and simultaneously create 29 additional Fourth-order combat powers!

When Su Yu previously fought against the "King," he spent many days' efforts to gather only ten Fourth-order combat Fusion People.

Now one Nuonuo equals three times that of then!

Of course, the fusion enhancement of Nuonuo also depends on the original rank of the Mechanical Creations.

At least they must be Nine-Star level to be fused and promoted to ten-star strength.

If it was in the past, Su Yu would have had some trouble getting 29 Nine-Star Mechanical Creations.

But now, Su Yu himself is a Fourth Rank Mechanic, capable of creating Fourth Rank Mechanical Creations, let alone Nine-star?

Moreover, Nuonuo now also possesses the function of a Mechanical Factory.

Su Yu can sense that Nuonuo's body is no longer composed of ordinary mechanical parts, but rather mechanical "cells" at the micro-level.

These mechanical cells can decompose and recombine at any time, like "workers," efficiently melting and recasting various materials.

With so many mechanical "cells," Nuonuo itself is a complex mechanical factory, a powerful Extraordinary Mechanic.

It can continuously produce various Mechanical Creations, being self-sufficient.

In other words, as long as Nuonuo has time, it can manufacture a mechanical army with Fourth-order strength on its own!

In addition, Nuonuo has even mastered the Power of Sunshine, seemingly absorbing some of the Radiant Blueprint's power, which is why its body has turned into a structure of mechanical cells.

This grants it a Radiant Field, enabling it to perform Radiant enhancements on Mechanical Creations.

But it doesn't have the modification function for humans, as its primary functions are targeted at Mechanical Creations, not human flesh and blood bodies.

It truly lives up to being Su Yu's initial and best partner; after its evolution, Nuonuo's power is extremely formidable.

If Su Yu's strength wasn't also extremely strong, comparable to Fourth-order Top Level, he probably wouldn't even be able to beat this Mechanical Apostle.

However, Nuonuo's mechanical manufacturing function does have a quantity limit, with Nine-Star level not exceeding 30 at most.

Seeing this figure, Su Yu fell into contemplation.

Su Yu understood that this was Nuonuo's limit, and also his limit.

For Mechanical Creations above Seven-Star, without resorting to cleverness, similar to humans, there's a need to perform ceremonies and obtain powerful Subspace Imprints to advance to Seven Stars.

Chapter 744: A Complete Transformation! The Three Great Mechanical Apostles!_2

Even seven stars are like this, let alone nine stars or even the fourth rank.

In fact, up until now, Su Yu hasn't formally held a ceremony for mechanical creations. He has the related knowledge, but hasn't practiced it.

Su Yu obtained some mechanical blueprints from those mechanic descendants, such as the blueprint of the Giant God Soldier Mecha, which includes a complete ritual.

However, those rituals are complex and troublesome, and not as simple as the ceremony he conducted for his own advancement.

It's still more convenient to "take shortcuts."

As long as you find a way, you can bypass this ritual restriction.

For example, Su Yu's Brutal Battle Armor back then, although powerful, was not fundamentally third-order.

At that time, Su Yu had just advanced to Ghost Hidden Blade, he was not a Seven-Star Mechanic, and did not have the ability to create third-order battle armor.

The real third-order aspect of the Brutal Battle Armor was actually the Brutal Core.

The essence of the Brutal Split Mind inside the Brutal Core reached the third rank, and with the help of this core, Su Yu managed to elevate the armor to the third-level.

And by using the [King], Su Yu crafted the Giant God Soldier Mecha, which also follows this principle, sealing a fourth-order top-level [King] alive in the mecha, making the mecha naturally fourth-order.

Such mechanical creations do not require additional rituals.

The ceremony of the Giant God Soldier Mechanic requires crafting a mecha using the body of a fourth-order enemy, which is actually a shortcut.

Otherwise, how could one create a fourth-order mecha without first advancing to the fourth rank?

Besides this shortcut method, there's another way, which is for Su Yu to "share" his subspace imprint with the mechanical creations.

Nuonuo, Mechanical Spirit, and these Mechanical Apostles can advance alongside Su Yu without the need for a ceremony because they can share Su Yu's subspace imprint.

If Su Yu refused to share, their ranks would immediately fall.

Of course, Su Yu would not do that.

This is somewhat similar to worshipping an Evil God, who can grant power to followers and also take it back at any time.

However, this sharing is obviously limited.

Su Yu cannot endlessly create Mechanical Apostles through this sharing, or else wouldn't he be invincible?

And Nuonuo seems to have also gained the "sharing" ability, allowing it to share the subspace imprint Su Yu shared with it.

Thus, it can create nine-star level mechanical creations, but the number is limited to 30.

This is the limit for both Nuonuo and Su Yu.

"From this perspective, my current strength can at most create about 30 nine-star level mechanical creations using shortcuts..."

Su Yu mused to himself.

In this way, creating an army of seven stars or even nine stars is not so simple.

Either take shortcuts, or find a way to conduct a ceremony.

However, Su Yu was not too troubled by this, as his current strength is formidable, and he would certainly come up with a solution.

Moreover, the Human Empire from ten thousand years ago undoubtedly had related techniques that could be used as reference.

Furthermore, truly seven-star mechanical creations are hard to come by, but seven-star-level mechanical power is not difficult for Su Yu at present.

For pure combat power, Su Yu just needs to pile up energy and calculation power; it's the Transcendent rank that's hard to advance to.

After pondering for a while, Su Yu stopped thinking and opened another Mechanical Apostle's attribute panel.

[Second Mechanical Apostle·Mechanical Spirit]

[Creator: Su Yu]

[Species: Data Life Form]

[Core Ability: Data Evolution (As a Data Life Form, Mechanical Spirit has limitless growth potential)]

[Skills:]

[High-level Data Materialization: After advancing to a fourth-rank Data Life Form following its master, Mechanical Spirit's calculation power has greatly increased, and it has gained the ability of high-level data materialization. Through high-level data materialization, Mechanical Spirit can manifest creations with up to nine-star strength, which requires consuming a vast amount of calculation power and energy. Possible manifestations in a year: seven stars 100, eight stars 50, nine stars 30!]

[Data Life Sustainance: After advancing to the fourth rank, Mechanical Spirit possesses the ability of high-level data materialization, which allows it to no longer depend on the existence of hardware and achieve self-maintenance and long-term existence through manifested hardware. (This consumes a large amount of calculation power and reduces its performance, so please prepare suitable hardware for it quickly)]

[Data Space: After advancing to the fourth rank, Mechanical Spirit can manifest space, but the manifest space has the characteristic of being data-like; the matter and life entering it will be datalized. (Do not casually allow life into Mechanical Spirit's data space, as it may lead to unpredictable consequences).]

[Comprehensive Strength Assessment: Ten-Star Advanced]

Mechanical Spirit's skills are not many but extremely powerful!

At this moment, it also has Su Yu's high-level data materialization ability, but it seems even stronger than Su Yu's.

After all, Su Yu's Manifestation Mechanic is still at the third rank, while Mechanical Spirit has advanced to the fourth rank!

And a fourth-ranked Mechanical Spirit not only can manifest powerful mechanical creations and self-sustain without hardware, but can also create a thing like [Data Space].

This data space can convert real substances into intangible data!

Previously, despite Su Yu's great strength, he could only freely convert energy coins between data, matter, and energy.

Ordinary materials were not possible.

But now, Mechanical Spirit can even transform ordinary materials into data!

Seeing this ability to transform matter and even life into data piqued Su Yu's curiosity.

Could he transform himself into data? If he did, what would he become? Would he still be the same?

Of course, Su Yu was just curious and would not attempt it rashly, especially since even the profession panel warned of unforeseeable consequences.

If the profession panel took the trouble to specifically remind him, those consequences must be very serious.

Su Yu suspected that this data transformation could be used as an extremely strong weapon. Faced with a formidable enemy, Mechanical Spirit could simply collect the enemy into the data space, and the enemy would just become a pile of data, at Su Yu's mercy.

Seeing it this way, Mechanical Spirit's offensive capability has also greatly improved.

However, specific details still need testing.

After reviewing Mechanical Spirit, Su Yu turned his gaze to the Brutal Battle Armor on him.

At this moment, for Su Yu, the Brutal Battle Armor is just like clothing, and inside this clothing resides a Mechanical Apostle: Fear Intelligence!

This fellow was originally a clone of Mechanical Spirit, but after coming into contact with the Brutal Split Mind, it was tainted by its fear emotion, mutated, and acquired fear emotion originating from the Evil God.

Later, in Illusion City, it devoured the city's intelligence "Illusion," becoming a Data Ghost. In any case, this guy is quite powerful and very lucky.

It's just a bit timid.

Now, this little fellow has evolved again, somewhat beyond Su Yu's expectations.

[Third Mechanical Apostle·Hell's Intelligence]

[Creator: Su Yu]

[Species: Data Life Form]

[Core Ability: Data Evolution (As a Data Life Form, Mechanical Spirit has limitless growth potential)]

[Skills:]

...

[Fear Blessing: Mechanical Spirit (Clone) for some unknown reason, stole the Brutal Evil God's core blessing "Fear," thus undergoing a mutation, possessing a strong suppressive force over data lifeforms that worship Evil Gods.]

[Digital Hell: Fear Intelligence's master possesses extraordinary talent in the domain of Hell's Pain, and Fear Intelligence has inherited a part of its master's talents, enabling it to condense a hell prototype, creating the Power of Hellish Suffering. However, its Power of Hellish Suffering is at the data level, possessing a very strong erosive power over any mechanical life and data life forms.]

[Data Ghost: Mechanical Spirit (Clone) devoured a high-level data lifeform that worshiped an Evil God, acquiring its abilities, and became a Data Ghost. With this ability, it can transform into a Data Ghost and freely possess mechanical creations and flesh-and-blood lifeforms.]

[Data Ghost Energy Control: Mechanical Spirit (Clone) devoured a high-level data lifeform that worshiped an Evil God, acquiring its abilities, and can control Data Ghost Energy.]

[Data Materialization: Can materialize intangible data, converting it into tangible materials!]

[Comprehensive Strength Assessment: Ten-Star Primary]

The name of Fear Intelligence has changed to Hell's Intelligence, and it has gained an additional ability, data hell!

It actually inherited Su Yu's talent in the domain of Hell's Pain!

Chapter 745: Raising the Evil God! The Promotion Plan of Mechanical City!

At this moment, the Brutal Battle Armor exuded a terrifying aura, containing boundless fear and endless pain.

This was the aura emitted by the evolved Hell's Intelligence.

This aura combined the original fear with the newly born Power of Hell's Pain, merging into an extraordinarily powerful and eerie aura.

This aura was extremely strong, reaching the fourth rank, highly corrosive and contaminating.

The fear of the Evil God, combined with the pain of Hell, seemed to undergo some bizarre transformation, drastically increasing its danger.

Even Su Yu could feel a bit of danger.

Su Yu immediately sealed this aura, preventing it from leaking out.

Because once this aura leaked, even the strong ones like Tie Long, Xie Yitian, and Xiao Shengyin, who are at the seven-star and eight-star, would instantly face a tragic death with just a slight touch.

If it weren't for the close connection between Hell's Intelligence and Su Yu, he himself would probably be threatened.

"Little one, how are you doing?"

After sealing the aura of Hell's Intelligence, Su Yu sent a message to the Brutal Core.

Through his connection with Hell's Intelligence, he could feel that its state was good, but for safety, he still asked proactively.

"Master, I... I'm fine, just a bit scared..."

From within the Brutal Core, the timid voice of Hell's Intelligence emerged.

Su Yu breathed a sigh of relief; this little one was still the same as before, powerful yet very timid.

The voice even sounded on the verge of tears.

Su Yu could understand why this guy was afraid, because Hell's Intelligence had awakened the Power of Hell's Pain, a cruel force that was indeed a bit shocking for the little guy.

The most important thing was the Brutal Split Mind!

"It actually got the Brutal Split Mind into the Hell Prototype..."

Su Yu could sense that in the current Brutal Core, the Brutal Split Mind no longer existed.

This part of the Evil God's mind had already been sealed by Hell's Intelligence into its Hell Prototype.

Hell's Intelligence, inheriting Su Yu's Hell Talent, naturally could also form its own Hell Prototype.

However, Hell's Intelligence's Hell Prototype was extremely peculiar, being a datafied space, somewhat similar to the Data Space of a Mechanical Spirit, but more eerie and dark.

Su Yu could feel that within that Data Hell Prototype, like the Manifestation Space of a Mechanical Spirit, any life form that entered would be datafied and then endure endless data pain.

As for how data could be painful, even Su Yu couldn't quite understand.

After all, he wasn't a Data Life and hadn't experienced it.

But judging by the state of the Brutal Split Mind, evidently, this kind of pain was unpleasant.

At this moment, within the data Hell of Hell's Intelligence, the Brutal Split Mind, which had already lost its consciousness, once again awakened to self-awareness.

This Brutal Split Mind had long been brainwashed by Su Yu with the Power of Nihilism, becoming an unconscious fool.

However, with the memories of the Evil God, it was bound to awaken its consciousness again sooner or later, becoming a new Brutal Split Mind, but when that would happen was uncertain.

But at this moment, the Power of Pain within the data Hell seemed to possess the ability to awaken, forcibly reviving the unconscious Brutal Split Mind, granting it self-awareness again.

This was not a good thing; without consciousness, it wouldn't feel pain, merely being like a stone.

Only conscious life could endure endless pain, and that's the true meaning of Hell!

And just as the Brutal Split Mind awakened its consciousness, it was thrown into this Hell, and under the stimulus of endless pain, it immediately became exceedingly furious.

This guy, true to being an Evil God, didn't plead or scream within the pain of Hell, but instead cursed furiously.

It seemed to use its own brutal emotions to counter the pain of Hell, the stronger the pain, the stronger its brutal emotions.

That's why Hell's Intelligence felt afraid, as the enraged Brutal Split Mind was indeed somewhat terrifying.

"This is..."

Su Yu discovered at this moment that the Brutal Split Mind was actually becoming stronger under the torment of Hell's Pain!

In a short period, its power exceeded its original rank.

It quickly reached the nine-star top level, and even leaped towards the fourth rank!

This did not mean its rank had elevated, but it forcefully exploded power close to the fourth rank with a third-rank level, akin to a desperate fight.

However, as an Evil God undying, fighting desperately seemed not to incur any cost.

Crunch! Crunch!

The machine body of the Brutal Battle Armor emitted groaning sounds, overwhelmed by the excessive power it couldn't withstand.

If this continued, the entire armor would likely be destroyed by the immense power.

Su Yu quickly released Spiritual Energy, suppressing and sealing the power of the Brutal Core. This anomaly barely ceased, but the power elevation of the Brutal Battle Armor also stopped, and did not reach the fourth-rank level.

However, this wasn't difficult for Su Yu, as he only needed to recast the machine body of the armor with high-grade materials capable of withstanding the power of the Brutal Core to let it truly advance to the fourth rank. This way, the Brutal Battle Armor would not only serve as clothing but also a battle-ready gear.

"So the Brutal Split Mind has this kind of use..."

Gaining another fourth-rank battle armor, Su Yu felt joyful and also broadened his horizons.

He had used the Brutal Battle Armor for a long time, yet never thought the Brutal Split Mind had such potential.

However, the previous Su Yu didn't possess the skills to torment the Evil God this way or perform such maneuvers.

Moreover, for the Brutal Battle Armor to ascend to the fourth rank, it still largely relied on the power of Hell's Intelligence.

Chapter 746: Raising the Evil God! The Promotion Plan of Mechanical City! - Part 2

This little guy is now fourth rank, and with its power blessing the brutal battle armor, it's not surprising that it has improved.

"It seems that brutality is most suited to being locked in hell. Its pain and brutal emotions will produce a continuous energy stream, making it the perfect energy source..."

Su Yu quietly sensed the power of the brutal battle armor and thought to himself.

This brutal evil god, under the stimulus of pain, erupts with powerful brutal emotions.

In this way, one portion of pain can generate double energy, or even more.

Compared to other life forms, brutality is the best "employee" to be sealed in hell, providing energy for Su Yu.

Su Yu even considered, if the opportunity arises in the future, sealing the entirety of the brutal evil god into the hell prototype, how powerful would that be?

But for now, it's just a thought.

"Mas... Master, won't this guy escape? I'm so scared..."

Hell's intelligence asked with a tremble in its voice.

"Don't worry, you're very strong now, it can't get out."

Su Yu comforted.

"That's good, this guy suddenly woke up, and its aura was terrifying. Thank goodness for the master..."

With Su Yu's reassurance, hell's intelligence felt slightly more at ease, but still a bit fearful.

Its fear seemed to evolve as well, becoming stronger and more corrosive. This fear was also one of its weapons.

The brutal evil god cursed painfully in the hell prototype, appearing domineering, but it couldn't help but feel fear within.

This fear was absorbed by hell's intelligence, causing its fear to evolve.

This fear emotion is considered a "product" of the brutal split mind.

This guy is very "economical," with one split mind producing three portions of energy at once.

Because of this fear, hell's intelligence constantly worried about the brutal split mind escaping the seal. Thankfully, Su Yu's reassurance prevented it from tormenting such a timid entity.

Su Yu wasn't just comforting; he was speaking the truth. The brutal split mind couldn't escape.

The brutal split mind was at an eight or nine-star rank and couldn't stand against a fourth-rank hell's intelligence.

However, with the stimulation of pain, the brutal emotions of the split mind grew stronger, and its rank seemed to be constantly upgrading.

Su Yu pondered whether he could "nurture an evil god" this way, making the brutal split mind stronger and eventually standing alongside its original form.

Although it sounded whimsical, Su Yu silently encouraged the brutal split mind, hoping it would give its all...

Meanwhile, Su Yu had finished inspecting all three Mechanical Apostles.

Three fourth-rank helpers had significantly increased Su Yu's strength. If Su Yu ever had to leave the Mechanical City again, leaving one or two Mechanical Apostles in the city would be enough to safeguard it.

Even if the Ghost Emperor infiltrated again, they could deal with it.

"However, speaking of which, there's one Mechanical Apostle that hasn't upgraded..."

Su Yu actually had four Mechanical Apostles. Besides Nuonuo, Mechanical Spirit, and Hell's Intelligence, there was one more, which was the core of the Mechanical City itself! The Unyielding City of Machines!

The Mechanical City, in itself, is a powerful Mechanical Creation, living with its own consciousness.

However, the Mechanical City hadn't ascended along with Su Yu's progression.

The scale of the Mechanical City was too large, requiring a massive amount of energy and materials to upgrade.

This left Su Yu a bit regretful. If the Mechanical City ascended to the fourth rank, how powerful would it be?

"Mechanical City, how do you feel now?"

Su Yu asked in his mind.

"I'm a little hungry..."

The consciousness of the Mechanical City replied, like a ravenous child.

Currently, it was also on the verge of ascending, but without sufficient energy and materials, it couldn't progress and only felt hungry.

"Haha, rest assured, I'll soon find you enough food..."

Su Yu comforted.

He gazed into the distance.

Finding "food" for the Mechanical City to ascend to the fourth rank wasn't easy.

Ordinary cities and materials, once devoured by the Mechanical City, hardly accelerated its evolution.

Fortunately, Su Yu already had a target in mind: the Ruins of the Giant God Soldiers! While destroyed, they still contained vast structural remains.

As the site of the legion of the Human Empire from ten thousand years ago, the building materials there were top-notch, perfect for feeding the Mechanical City.

If that wasn't sufficient, Su Yu had another target — the lair of the Ghost Emperor!

Indeed, Su Yu planned for the Mechanical City to devour the Ghost Emperor's lair!

This Ghost Emperor, who previously infiltrated Su Yu's Mechanical City, would not be let off easily.

"First, head to the Ruins of the Giant God Soldier Camp, then to the Radiation Land to find the Ghost Emperor!"

Su Yu ordered the Mechanical City to set off towards the Ruins of the Giant God Soldier Camp.

The Mechanical City, hearing it could eat, immediately became excited and started its engines.

Soon, gigantic mechanical jets protruded from the city's edges, each one a hundred meters thick.

After a brief warm-up, intense red light erupted from the jets, booming!

The engine roared, and the high-pressure spirit energy gas blazed across the sky.

At this moment, everyone in the Mechanical City staggered as the entire city accelerated fiercely.

Fortunately, Su Yu had prepared in advance, and the Mechanical Spirit released energy at the right moment, supporting everyone and preventing them from falling.

Everyone was shocked and puzzled, unsure why the Mechanical City suddenly started moving.

Su Yu promptly instructed the Mechanical Spirit to send messages to all information terminals in the city, informing that the Mechanical City was moving to a location to "feed," preparing to ascend to the fourth rank.

"What? The Mechanical City is actually a Mechanical Creation and can move? Now it's going to ascend?"

"The Mechanical City was only third rank? I wonder how powerful it'll be after ascending?"

"My god! Upgrading the whole city to the fourth rank? Mr. Su Yu is truly remarkable!"

"Feeding? Meaning this city can eat? That's incredible..."

People, after receiving Su Yu's message, were surprised and started discussing.

Many were newcomers to the Mechanical City, learning for the first time that the grand Mechanical City was actually a "Mechanical Creation" and even had a rank.

Such a massive Mechanical City was only third rank, and Mr. Su Yu planned for it to "feed" to upgrade to the fourth rank!

Though many didn't understand what this meant, just the term "fourth rank" was enough to excite and thrill them!

The third-rank Mechanical City was already so grand and powerful, so what about the fourth rank?

"Feeding? I wonder which city Mr. Su Yu has targeted this time?"

Some old residents of the Mechanical City recalled past events.

These old residents had witnessed the Mechanical City devouring cities before.

Upon hearing the word "feeding," they instinctively thought Mr. Su Yu probably had an eye on another city, ready for the Mechanical City to feast.

They guessed correctly, as Su Yu indeed targeted a formidable city — the Ghost Emperor's!

As the Mechanical City accelerated, it quickly broke the sound barrier, and its speed continued to increase.

At this rate, they would soon reach the Ruins of the Giant God Soldier Camp.

"Mr. Su Yu..."

Nearby stood Tie Long, Xie Yitian, and others,

coming to consult Su Yu on gathering food from outside the city; otherwise, in a month or two, the city's food would be exhausted by the Mechanic descendants.

But they were met with a sequence of Su Yu's strange actions.

First, he produced a sphere and then pondered over his battle armor, before starting the Mechanical City for "feeding" — a series of changes left them puzzled.

"Hmm?"

Su Yu looked up, gave a slight smile, and understood their intention.

"I'm aware of the situation."

"You go back for now, don't leave the city. I'll take care of the food issue."

Chapter 747: Food Synthesis Plan, Micro Machines!

Hearing Su Yu's words, everyone dared not ask more and had to turn and leave.

Without Su Yu's permission, they couldn't leave the Mechanical City to look for food outside.

However, since Su Yu could solve it, they were at ease.

As for Su Yu's method, it was simple, because just as the Galaxy Battle Armor was telling him stories of the past, it mentioned one thing, and that was how the Empire used to produce food.

It was production, not planting, not breeding, not hunting.

Currently, the food in the Mechanical City mainly relies on hunting Radiation Beasts and then undergoing purification.

Another part relies on planting; with such a large place as the Mechanical City, it's naturally possible to cultivate land.

However, the entire Mechanical City was only recently established, and the planted crops have just sprouted and are far from harvesting.

A thousand years ago, during the Human Empire's era, the acquisition of food was advanced, relying entirely on mechanical synthesis to produce a rich variety of food.

After all, when humans were exploring the Star Sea back then, they couldn't rely on hunting, planting, or breeding in the deep space of the universe to obtain food.

Convenient and quick food synthesis technology was essential.

Now, Su Yu plans to use this method to supply food for the entire city's population.

The main components of grains and cereals are starch, while the main components of meat are proteins and fats.

The synthesis of these substances is not difficult for Su Yu now.

Moreover, the raw materials are easily obtainable, mainly carbon dioxide, water, and other substances, which can be obtained from the air; as long as there is energy, it is almost endless.

Although Su Yu hasn't deeply studied chemical synthesis, with his current computational power and intelligence, learning it is simple.

The Galaxy Battle Armor can also provide a complete synthesis route. This kind of knowledge was not a secret in the Empire a millennium ago, and the Galaxy Battle Armor, living for so many years, has mastered a bit.

Even those Mechanic descendants have mastered food synthesis technology; in fact, those descendants have been eating synthetic food for thousands of years.

Su Yu only needs to design mechanical devices according to the synthesis route.

However, mere starch and proteins cannot be considered food.

Because those things have no taste, no texture, they can only be considered "medicine" to sustain life.

Looking at those Mechanic descendants, after eating synthetic food for ten thousand years, they crave it incredibly, as if they were reincarnated hungry ghosts now.

So, the true challenge of synthetic food is to synthesize food as delicious as natural food and with rich taste, which can be considered successful.

This is somewhat difficult and presents a small challenge.

"Then let's try micro-mechanical..."

With a flip of his hand, Su Yu revealed something like dust.

This dust is practically undetectable, but with a microscope, one could see they are microscopic mechanical life forms.

These were the Mechanical Race that Su Yu obtained while researching the Hell Furnace!

These Mechanical Race were placed into the Hell Furnace by the [King] to endure torture.

Their bodies were mostly digested by the Hell Furnace, leaving only this minuscule amount like dust.

However, they didn't die, for only living beings can endure pain and provide energy for the Hell Furnace.

Later, Su Yu, to defeat [King], researched the Hell Furnace and discovered these heavily tormented beings, extracting them.

Su Yu had not yet decided how to deal with them earlier.

These Mechanical Race weren't all that bad.

They were considered a relatively pure and honest faction among the Mechanical Race, which is why they were abandoned into the Hell Furnace.

They weren't all that good either; they had oppressed humans over the millennia, though not too excessively.

Thus, Su Yu did not cast them into the Hell Engine for torture, nor did he release them, instead leaving them in the Manifestation Space to sleep.

Now, Su Yu was thinking of them.

The state of these guys was somewhat peculiar, entirely in a dust-like state, similar to the mechanical cells of the Radiant Blueprint but also different.

Mechanical cells have no complete function on their own, nor do they have consciousness; only when combined do they form a complete Mechanical Creation.

Each of these miniaturized Mechanical Race members is a complete machine and cannot be combined.

Their state intrigued Su Yu.

Previously, Su Yu intended to research these beings to create microscopic-level Giant God Soldier Mechas, but after studying the Radiant Blueprint, Su Yu temporarily abandoned this idea.

But this doesn't mean that these miniaturized Mechanical Race members are useless.

If utilized properly, these little things make excellent labor.

They can be used to synthesize food!

Su Yu wants to synthesize food, recreating the taste and texture of real food, requiring him to delve deeply into the microscopic and cellular level like true food.

After all, real food is essentially composed of the bodies of plants and animals built by various cells. Su Yu wants to synthesize it, must naturally refer to the real cellular structure for perfection.

However, doing so would be too troublesome, requiring synthesis and construction at the microscopic level.

Moreover, the quantity needed for synthetic food is massive, as millions of people need to eat.

This requires consuming an enormous amount of computational power and resources because delving into the microscopic level is not so simple.

Chapter 748: Food Synthesis Plan, Micro Machines! _2

And this Miniature Mechanical Race came in handy.

At the same time, it was also an experimental study on these Miniature Mechanical Race.

"Mr. Su Yu!"

The Galaxy Battle Armor saw the tiny dust in Su Yu's hand, recognized it, and immediately showed excitement.

It recognized that these specks of dust were actually the mechanical race companions from the previous banquet of the [King].

Even its good friends, the G7 couple, were among them!

Originally, the Galaxy Battle Armor thought they were all dead and was actually still sad about it, but unexpectedly, they were all fine!

Though looking at their condition, it's not quite accurate to say they're fine, but it's better than being dead.

"These guys, I rescued them from the Hell Furnace. In the furnace, they turned into this state. I plan to have them help me with some work, do you have any objections?"

Su Yu casually explained to the Galaxy Battle Armor.

The Galaxy Battle Armor quickly said, "No objections, no objections at all!"

Seeing old friends alive was comforting enough, what more could it object to?

"I plan to make them employees of a food synthesis factory, to synthesize food for humanity forever, in recompense for their oppression and enslavement of humans. What do you think?"

Su Yu chuckled.

"Synthesize food?"

The Galaxy Battle Armor was slightly surprised, then happily said, "Good! That's a great idea!"

Initially, the Galaxy Battle Armor was somewhat worried. After all, Su Yu was human and these mechanical races had previously oppressed and enslaved humans. Would Su Yu revenge on these mechanical beings by throwing them into hell to suffer? That would be too cruel.

Now, merely having them synthesize food was far too lenient.

Su Yu nodded, then sent out a signal to activate these sleeping mechanical races.

Currently, Su Yu was a Fourth Rank Mechanic. Controlling these extremely weak mechanical beings was simple.

When these mechanical races awakened, they immediately understood Su Yu's intentions and comprehended the situation.

The signal Su Yu had just sent told them everything.

The hearts of these mechanical beings were in turmoil.

They hadn't expected such a dramatic change in their status in such a short time.

Not long ago, they were showing off their power in the Manifestation Space city, being served by millions of human mechanics, enjoying feasts.

They were then betrayed by their most revered [King] and refined in the Hell Furnace.

Now, they were saved by Su Yu, this human who turned around to enslave them and make them produce food for humans.

Indeed, in Su Yu's signal, it clearly demanded their enslavement, for ten thousand years.

After all, these mechanical races had enslaved humans for ten thousand years; now it was just their turn to repay the debt.

As for after ten thousand years, who knows what might happen? Su Yu himself had only been alive for about twenty years; they'd deal with that in the future.

The mechanical races pondered briefly and then collectively bowed to Su Yu, "Honorable Mr. Su Yu, we, the Mechanical Race, pledge our loyalty to you! To humanity!"

They accepted this ten-thousand-year contract.

Refusing wasn't an option; although Su Yu hadn't mentioned the consequences of defiance, these mechanical beings were intelligent enough to know it wouldn't end well.

Seeing this, Su Yu nodded in satisfaction, then activated his Mechanic's ability, imprinting these mechanical beings' bodies and minds to prevent betrayal.

As a Fourth Rank Mechanic, Su Yu had incredibly strong control over machines, though not yet to the 'supreme command' level of someone like Zhang Chenfeng. However, controlling these weak mechanical races was easy.

Moreover, with Su Yu's increasing strength, this control ability would only grow stronger!

Unless a stronger mechanic wrestled for control, there was no need to worry about betrayal.

In fact, Su Yu could have erased their minds entirely, but he wasn't cruel enough for that; he spared their lives.

After bringing these mechanical races under control, a flow of pure spirit energy surged from Su Yu's palm, restoring their energy.

Their bodies had shrunk to microscopic dust, naturally losing all energy.

Although they retained their original ranks, and even G7 kept its Fourth Rank essence, their power was weaker than even an ant.

But now, as Su Yu infused them with energy, their power was rapidly recovering.

Su Yu watched them with interest, curious to see if these tiny beings could regain their full strength with enough energy.

A seven-star mechanical creation at dust-size seemed quite formidable?

But alas, to Su Yu's disappointment, after regaining some strength, they couldn't absorb more energy, as if satiated.

And their power, even the strongest, was only at the level of a One-Star Transcendent, even G7 with its Fourth Rank essence was the same.

Still, a microscopic One-Star Transcendent was quite formidable. Back when Su Yu acquired the Profession Panel, he wasn't even a One-Star Transcendent.

But compared to a seven-star powerhouse, it was significantly lacking.

"Indeed, being too small imposes limits on both physical body and energy,"

Su Yu observed these beings for a while and shook his head slightly.

It seemed unrealistic to rely on them as combat power; even if they numbered in the thousands or millions, Su Yu could blow them away with one breath.

However, if there were tens or hundreds of millions, or even billions, and using mechanical fusion technology to combine them, perhaps something could be done?

Su Yu mused thoughtfully.

But Su Yu didn't immediately experiment on them since he didn't trust these mechanical beings, nor would he impart mechanical fusion technology to them.

"Your next tasks are to research food synthesis and to reproduce quickly! Your numbers are too few to meet the demand."

"I will provide you with sufficient energy and materials,"

Su Yu sent out another command to the mechanical races.

Relying on these mechanical beings to synthesize food with just such a small number wouldn't suffice.

"Yes, Mr. Su Yu!"

Although these mechanical races were somewhat stunned by his words, they quickly replied.

However, they exchanged looks, reproduction? this...

These mechanical races aren't like ordinary machines; they aren't manufactured.

They reproduce through biological-like male and female mating. Strange though it may be, this is how they propagate.

These mechanical races are quite particular; they require steps like falling in love, getting married, and after having children, also need to be nurtured and educated.

Such a hassle, when would they ever reach Su Yu's required numbers?

Moreover, they're now in Su Yu's palm; would they have to reproduce right here? How embarrassing...

After hesitating for a moment, they requested of Su Yu whether they could refrain from immediate reproduction and instead start manufacturing mechanicals independently.

Besides reproduction, they indeed had a common method of expansion, like a mechanic, manufacturing machines.

Being mechanical themselves, they were proficient in constructing mechanisms, and willing to build machines was naturally not an issue.

However, those manufactured would merely be tools, devoid of the life of the Mechanical Race.

Which was just as well, since they currently needed enough tools anyway; who'd actually bring a bunch of children to toil?

"Alright."

Su Yu granted their request.

In truth, he was quite curious to see how these mechanical beings would reproduce, but they seemed unwilling, so forget it.

Then, Su Yu released some materials, placing the mechanical races upon them.

The materials were metal ingots, with these dust-sized mechanical beings practically invisible upon them.

However, after a moment, changes occurred! Corrosion marks appeared on those metal ingots, as if rusting.

A short while later, gaps appeared!

"Such high efficiency!"

Su Yu secretly thought, somewhat surprised.

These tiny mechanical beings seemed quite stronger than initially expected!

Chapter 749: The Power of the Miniature Mechanical Race, Exponential Surge!

These miniature mechanical beings are so small that they are almost invisible to the naked eye, and their energy is at an extremely low point. Su Yu initially thought that, before reaching a sufficient number, they wouldn't be able to form a significant force.

But now it seems, once they are activated, they are quite powerful.

The metal ingot Su Yu took out was a high-grade material obtained from the Giant God Soldier Camp, exceptionally hard.

Su Yu specifically brought out these materials to test these miniature mechanical beings.

In principle, these creatures at the strongest only reach one-star level and should not be able to affect such advanced materials.

Yet in a short time, they have begun cutting, reforging, and replicating themselves using the metal ingot with unbelievable efficiency.

That's why the phenomenon of the metal ingot being corroded appeared; it's actually the miniature mechanical race at work.

This surprised Su Yu a bit. How are they doing this?

Su Yu carefully observed the working process of these mechanical beings, lost in thought.

The structure of these miniature mechanical beings seems to have a secret. It's not just about being miniaturized; they possess some powerful functionalities.

They can exert very strong destructive power with limited energy, especially in destroying large objects.

Under normal circumstances, quickly destroying those metal ingots requires at least a six-star energy level, preferably seven-star.

However, these miniature mechanical beings achieve quick destruction of a metal ingot using just one-star level energy.

The secret lies in their body structure, which is worth studying.

Su Yu concentrated his spirit, closely observing how these mechanical beings were destroying that material.

Under Su Yu's powerful spiritual power, the scene before him magnified rapidly, revealing the clear flow of energy.

After observing for a while, Su Yu discovered that these miniature mechanical beings could extremely concentrate energy.

These mechanical beings are already tiny, and the energy they mobilize is in a relatively concentrated state.

But they can concentrate it thousandfold further, refining each unit of energy to a truly micro scale.

This extremely concentrated energy acts like fine needles, deeply piercing the metal ingot, destroying its crystalline structure and disassembling it.

"Ah, so that's how it is..."

Su Yu watched for a while, inwardly admiring.

This mechanical race's techniques are indeed ingenious. Despite their weakened energy, they rely on powerful control to extremely concentrate energy, breaking through by focusing on a point to penetrate a surface, thereby achieving strong destructive power.

Though the area of destruction is small, it's sufficient for their needs.

The means these mechanical beings use, Su Yu could achieve as well.

However, Su Yu is a powerful Fourth Rank Transcendent with strong control, whereas these miniature mechanical beings only have a maximum strength of one-star. For them to achieve such feats is very difficult.

When Su Yu was at one-star, he certainly didn't have their abilities.

While Su Yu was researching, those miniature mechanical beings quickly used the metal ingots as materials to replicate themselves, producing a large quantity of machinery.

These machines are clones of their bodies, yet without self-awareness, merely tools controlled by them.

Once these clones were produced, they immediately followed a preset program, continuing to use the metal ingots as raw material to replicate themselves again.

Soon, the number of these miniature machines began to multiply exponentially!

Tenfold, a hundredfold, a thousandfold...

In a short time, their numbers multiplied by thousands and even tens of thousands, continuing to grow explosively!

The material from the metal ingots was swiftly consumed.

And where the metal ingot disappeared, a mass of dark mist-like substance remained, aggregations of numerous miniature machines.

"What is this..."

Seeing this scene, Su Yu's expression turned solemn.

"You all stop!"

"How did you acquire the technology to replicate yourselves? And how did you gain the ability to cut and refine materials?"

Su Yu hurriedly halted the miniature mechanical race and interrogated them.

These mechanical beings, when initially manufacturing their clones, were extremely adept and efficient.

They would quickly adjust the details of the clones based on the different materials of the metal ingots.

The entire replication process took no more than a minute.

Although their bodies are miniature, with simple structures and weak strength, making replication substantially easier, such replication speed is indeed astonishing.

It seems they are very skilled at replicating themselves, as if having done it countless times.

And the energy concentration technique is also highly advanced.

Yet, Su Yu had previously rounded up the mechanical race in the Manifestation Space, even capturing the "King" alive, but had never encountered any clones of the mechanical race.

Where did these guys get such rich replication experience?

During the previous battle, they hadn't used that energy concentration technique either.

Moreover, Su Yu had just used the Mechanic's ability to invade the consciousness of these mechanical beings but found no related data.

It seems these mechanical beings' self-replication and energy concentration techniques don't rely on consciousness control at all, but are purely instinctual, much like humans breathing, something they're innately capable of without needing to learn.

This is somewhat peculiar.

"We... we don't know either..."

Faced with Su Yu's questioning, these mechanical beings looked at each other, bewildered.

Chapter 750: The Power of the Miniature Mechanical Race, Exponential Surge!_2

They themselves actually don't even know how they just accomplished that.

Under normal circumstances, for them to replicate themselves and manufacture, it would take time and computational power.

But once they started replicating, they entered a certain selfless state, where everything happened naturally, and they completed the work rapidly.

Su Yu heard this and frowned slightly.

Relying on his abilities as a Mechanic, he could judge that they weren't lying. They genuinely didn't know how they achieved it; it was all instinctual.

This is interesting.

"You all continue,"

Su Yu, after pondering for a moment, said.

At the same time, he released more materials and energy for the Mechanical Race to use.

This time, the quantity and types of materials he released were more.

He wanted to see if these Mechanical Race members could complete rapid replication when faced with more types of materials.

"Yes, Mr. Su Yu."

The Mechanical Race, upon hearing this, dared not disobey and immediately got back to work.

The black mist quickly enveloped the new materials Su Yu released and devoured them rapidly.

At their rate of replicating once every minute, in one minute, their numbers would double, and in ten minutes, they'd increase a thousandfold.

In a hundred minutes, that would be a millionfold!

Although initially, they were just a tiny speck of dust, almost invisible to the naked eye, once scaled, their replication speed was terrifying.

The first batch of materials Su Yu released was only about one ton; it took them over two hours to finish devouring.

But the second time, Su Yu released a full one thousand tons, and it took them only about ten minutes to completely devour it.

And their scale expanded again, forming a dense mass suspended in midair.

"Mr. Su... Su Yu, is there something wrong with us...?"

At this point, even the Mechanical Race themselves noticed something amiss.

Their devouring and replication speed seemed too terrifying.

In just a short time, they expanded to this scale.

At this pace, if given time, wouldn't it be long before they could devour the entire Mechanical City, converting it all into their Clones?

They looked at Su Yu worriedly, fearing that Su Yu might be wary of their power and decide to wipe them out.

Even though they've initially taken shape, they still have no power to resist Su Yu.

Fortunately, although Su Yu looked serious, he didn't seem to intend harm; instead, he appeared interested.

Su Yu observed their state for a while, then said:

"That's enough. Maintain your current scale for now. Unless I give the order, you are not to expand further!"

The Mechanical Race all breathed a sigh of relief upon hearing this and quickly replied: "Yes, Mr. Su Yu!"

It seems Su Yu does not intend to act against them.

Su Yu nodded and then transmitted some blueprints to them: "Next, manufacture equipment according to these blueprints and synthesize food."

Now that the Mechanical Race had formed a scale, they could use them to synthesize food.

The Mechanical Race quickly received the information and began synthesizing.

By studying the blueprint information transmitted by Su Yu, they started transforming the Clones into machines for synthesizing food.

The division of labor was clear: some synthesized starch, some synthesized protein, and some synthesized fat.

Su Yu provided them with raw materials and energy.

Their efficiency was high, and they quickly transformed the Clones into miniature production lines, initially synthesizing materials like starch and protein.

Starch was relatively simple, but protein was much more complex, requiring the synthesis of various amino acids first and then combining them into different proteins.

After initially synthesizing these things, Su Yu gave them additional blueprints.

He instructed them to use starch, protein, and fat to synthesize real food like flour, rice, and meat.

This was somewhat complex; flour and rice were relatively easy, quickly synthesized into something presentable.

But for meat, achieving a true meat texture and flavor required working from the minute structural level and adjusting based on protein types.

Proteins are diverse, and a structural difference can lead to vastly different properties and flavors.

Especially for this Mechanical Race that doesn't eat meat and doesn't know what it tastes like, synthesizing these things was somewhat beyond their capabilities.

It's not that they couldn't synthesize it, but the synthesized meat, although seemingly authentic on the surface, had strange flavors that didn't need tasting to identify issues.

Su Yu released a flame to grill a piece of synthetic meat, and instantly, a pungent smell of burnt rubber filled the air.

"Looks like I need to find them some assistants to taste it and provide adjustment suggestions..."

Su Yu thought to himself as he looked at the grotesque synthetic meat.

To synthesize satisfactory flavors, taste testing would be best, but Su Yu wasn't interested in eating these unfortunate creations.

After a brief thought, Su Yu sent a message to the Mechanic's descendants, saying he was testing new food and needed people for taste testing.

As soon as this message went out, the descendants of the Mechanic were instantly excited.

Free food?

In a short time, a large number of Mechanic's descendants enthusiastically signed up.

Su Yu was somewhat speechless at these foodies and randomly selected dozens of people.

After a while, dozens of Mechanic's descendants were in front of Su Yu.

Some familiar faces were among them, such as the little girl Zhou Qing, who was the first Su Yu saved.

This little one had been in Mechanical City for only a few days but had become a bit rounder, almost turning into a chubby little girl.

Su Yu looked at these folks and chuckled to himself, then told them about the synthetic food plan.

Upon hearing that Su Yu had such a "great" plan, they were so excited they were almost in tears.

They had been worrying these past few days, fearing they had eaten too much and that the city's food supply might not be enough.

Now, with Su Yu's synthetic food plan, as long as it's completed, there wouldn't be any problems.

"Mr. Su Yu, don't worry, leave it to us!"

They were thrilled and had no objections to the task of taste testing.

Previously, they had been eating recycled synthetic food in the Manifestation Space for ten thousand years.

The raw materials for that synthetic food were disgusting, poorly processed, and synthesized from basic starch and amino acids, making the taste indescribable.

Compared to those disgusting things, these grotesque meats were nothing; at least they looked like meat and the raw materials were surely clean.

They immediately grabbed the grotesque meat to taste, commenting afterward with earnestness.

Upon hearing their feedback, the Mechanical Race promptly made targeted adjustments.

The research into food synthesis quickly got on track.

However, synthesizing delicious meat in a short time was still challenging.

Soon, the Mechanic's descendants began to wear pained expressions as they ate.

At first, they didn't think much of it; these synthetic meats, however unpleasant, couldn't be worse-tasting than the synthetic food they had before, could they?

They soon realized they were too hasty.

They had been feasting and reveling, getting used to normal food. Now, eating these grotesque meats, they simply couldn't swallow them down.

Yet, they had to keep taste testing for the research, eating more and more.

They could only encourage themselves, knowing they had to endure these tastes for Mr. Su Yu's "great" plan.

With determined expressions, they kept shoving the synthetic grotesque meat into their mouths, making Su Yu a bit unable to bear watching.

However, since they willingly ate these things, Su Yu could hardly be blamed.

Moreover, Su Yu had no time to care about them; he had his own matters to attend to, which was studying the secrets of the Miniature Mechanical Race.

Although the Miniature Mechanical Race had ceased expansion, their terrifying replication ability had made a deep impression on Su Yu.

If they were to replicate infinitely, Su Yu suspected the entire planet could be devoured by them!
