

Kryptonian 121

Chapter 121 Superpowers

The ability to modify reality depends on Luther's imagination and energy, and there is no limit.

It is no problem to modify people and things into other things.

Thanos used the reality gem no less than three times. Once he modified the base of the collector in the "Land of Ignorance", once he modified part of the reality of Titan, and the third time he turned the entire building into an alien bird after being hit in the face by Iron Man's building.

For these operations to modify reality, energy support is required to a certain extent. How long the reality can be maintained and how large the scope of reality modification is depends on the amount of energy supply and time.

In addition, modifying reality is more of "creating by memory and imagination", which is rootless water or castles in the air.

Then, obviously, in order to maintain this "castle in the air", a continuous energy support that can match the needs of this "castle in the air" is needed.

Therefore, the superpower of modifying reality can modify reality to a certain extent, but it cannot permanently modify reality from the essence or causality, and make this reality a fait accompli.

Maybe if this ability continues to grow stronger, it may be possible to achieve permanent modification, but the price is unknown.

Luther figured out the principle of modifying reality. To put it bluntly, it is an equivalent exchange. It seems that it is not as convenient as Majin Buu's transformation magic, but it is actually stronger than Majin Buu's transformation magic.

Luther can even modify the reality that is unfavorable to him like Izanagi in Naruto!

"This is really a big profit."

Luther sighed, just this ability to modify reality is an unimaginable gain.

One superpower is better than most of the magic and superpowers Luther has obtained.

Then there is the superpower born from absorbing the power of the power gem.

The power gem represents all the forces in the universe, which means that the power gem is far superior to other gems, that is, time, space, natural laws, and cause and effect are meaningless in front of it.

Even matter, energy, and speed are meaningless, no matter how strong your power is, it is meaningless, because it already includes all forces. To be precise, it is already an existence that can surpass all gems.

And it also ignores logic and concepts, and can arbitrarily manipulate the forces of the multiverse, natural laws, physical laws, and logical concepts. As long as it is power, it cannot be separated from the force.

The superpower Luther obtained is "absolute power"!

"Isn't this Dou Jian's ability?"

Luther was surprised by this absolute power superpower.

The bigger the heart, the greater the power!

Dou Jian's superpower is that the more confident he is, the stronger his strength, defense, speed, and superpowers will be. This is also one of the reasons why he is called Marvel Superman. His abilities such as freezing breath and heat vision are completely a replica of Kal-El.

His superpower depends entirely on his confidence. The slightest wavering will greatly reduce his power and even cause him to be broken by weak attacks.

Some people may think that it is simple to maintain confidence, but in fact, people cannot deceive their own hearts and consciousness.

When facing an operation where a planet hits your face, even if you are confident that you can definitely catch the planet, you will definitely have a little doubt in your heart. It's not much, and just this little bit is enough to greatly reduce your power.

With Dou Jian's strength, when he is absolutely confident, no one in the universe can be his opponent except the god-level strongmen, and he is the first person under the god-level.

The god-level here is not the god like Bambi, but the god of the universe!

The Celestial God Group is no match, but if the Celestial God Clan encounters Dou Jian, they will probably be pressed to the ground.

Now Luther has a similar superpower, absolute power, which can also be regarded as "idealistic power".

But it seems that Superman himself is a model of idealistic power?

The superpower of absolute power can allow Luther to surpass his own limits and exert more powerful strength, speed, defense, energy, etc., and even the mind and soul will be affected by this superpower.

The more confident Luther is, the stronger his combat power will be. Theoretically, it is not impossible to obtain a 400-fold normal combat power improvement beyond Super Saiyan 3.

More importantly, this superpower is a super-strengthened power with no shortcomings in all aspects. The only shortcoming may be the energy problem, but Luther has unlimited energy and unlimited physical endurance...

"This superpower is also very strong. It directly strengthens my combat effectiveness, which is much better than auxiliary abilities such as modifying reality."

Luther looked at the Cosmic Cube with satisfaction.

By absorbing the power of the Reality Stone and the Power Stone, he awakened two very useful superpowers. What if he absorbs the energy of the Cosmic Cube?

Will the superpower of "crossing" be strengthened?

Or will superpowers such as "instant movement" and "teleportation" be strengthened?

Luther thought that the Reality Stone and the Power Stone had been activated and used by him, and Thanos probably felt it, but it didn't matter. Now the Supreme Sorcerer Ancient One is still alive, Odin is still alive, and Thanos doesn't have the courage to come to Earth.

Besides, even if he came, Luther could punch him into two pancakes.

It seems that it doesn't matter even if he uses the Cosmic Cube?

"You can't take this thing out. If you take it out, it will be an ordinary gem. Otherwise, I would just take the infinite gems and go to other worlds for a better experience."

Luther shook his head and crushed the outer shell of the Cosmic Cube.

A dark blue space gem appeared inside, and then Luther grabbed the space gem and began to absorb the power of the space gem.

The energy radiation of the space gem stimulated Luther's cells to mutate again, and Luther successfully awakened new superpowers!

There are no changes in time travel, teleportation, and teleportation, except for the addition of a new space-based ability.

"Space compression"!

Being able to compress a space will also make the materials in the space smaller. Is it probably an alternative storage ability?

And this ability also has a killing effect, that is, it only compresses the space and does not compress the things in the space, then the things inside will be crushed by the space pressure!

That's the pressure of space. I'm afraid it's more terrifying than the pressure of black holes and neutron stars. Theoretically, there's nothing that can resist it.

"I guess even Majin Buu can't roar through the compressed space, right?"

Luther tried to compress the space, and then a molecule-sized space appeared in his hand, and the things inside were compressed and became smaller along with the space.

Chapter 122 Nick Fury's Thoughts

Luther returned to Earth with three Infinity Stones.

At the same time, Nick Fury also knew about the disappearance of the Cosmic Cube.

After all, the world is not peaceful now, and the superpowers of "Hydra" are wreaking havoc everywhere, targeting America.

Nick Fury then had the idea to re-study the Cosmic Cube and create more powerful weapons.

Although the original plot did not stop the research on the Cosmic Cube, Nick Fury did not really use the power of SHIELD to find those powerful scientific researchers for research.

Now, the situation is different.

However, after learning that the Cosmic Cube had disappeared, Nick Fury was furious, and everyone in the base was put into an interrogation room for interrogation.

He suspected that there were Hydra people among these people!

Hydra had also studied the Cosmic Cube back then, and it was normal to know about the Cosmic Cube and to want to get it again.

"Pierce, I suspect SHIELD has been infiltrated by Hydra people!"

Nick Fury wanted to launch an investigation into SHIELD, so he went directly to Alexander Pierce.

Although he is the Director, S.H.I.E.L.D. wants to prevent the Director from having too much power and a situation like Hoover's, so Nick Fury's privileges in all aspects need to be approved and authorized by the Security Council and Alexander Pierce, his superior.

Of course, sometimes he brushes aside, and the Security Council can't do anything to Nick Fury.

Alexander Pierce now gets a headache whenever he hears the word Hydra.

He and other Hydra leaders have been investigating around the world for a long time. Not only did they not find the Black Caesar, but they also aroused the sensitivity and vigilance of other forces in the dark world, asking them what Hydra wanted to do. , do you want to unify the dark world of the earth?

Of course Hydra won't care about these little troubles. Just kidding, Hydra is a well-deserved underground overlord, a Dark Emperor-like existence, but it is also very troublesome when there are too many.

Now that I finally calmed down these annoying things, I heard that Nick Fury wanted to investigate the inside of S.H.I.E.L.D.

Can this still be checked? Isn't it accurate to check one by one?

"What happened?"

Pierce really doesn't know what happened to make Nick Fury determined to investigate within S.H.I.E.L.D.

"The Cosmic Cube is missing."

Nick Fury explodes.

"What!"

Pierce stood up directly. Of course Pierce knew how important something like the Cosmic Cube was. He was a disciple of the Red Skull. But now the Cosmic Cube is missing?

"I've got the people in the base under control. They all said they didn't know what happened. They seemed to have taken a nap, and then the Cosmic Cube disappeared when they woke up. This matter must not be that simple. Maybe it's Hydra's super power. A capable person did it!"

Nick Fury said.

It's possible that the people at the base are not suspicious, and it could be the superpowers of Hydra's superpowers, but Nick Fury feels that he still can't let it go.

"Fury, you are too sensitive. Where is our SHIELD? Even if Hydra survived, it would not be able to grow, let alone infiltrate SHIELD."

Pierce thought for a moment and said.

"But every time they can find the travel routes of those invisible rich people and attack them."

Nick Fury argued that this already showed that Hydra had gained a certain degree of power. Before, he had thought that these invisible rich men were so careful about confidentiality that even the FBI would have difficulty investigating their travel routes. How did the head snake do it?

He thought about two possibilities, one was superpower, the other was...

Now that the Cosmic Cube has been lost, a second possibility seems to exist.

That means SHIELD has been infiltrated by Hydra!

"Fury, your idea is too bad. Maybe the FBI and CIA have been infiltrated. If these two departments were infiltrated, it is possible to do what you said."

Pierce seemed reluctant to accept the possibility of S.H.I.E.L.D. being infiltrated.

"Pierce, I can understand your reluctance, but we cannot treat possible facts as impossible."

Nick Fury comforted Pierce. This old man who was over fifty years old might not be able to accept such a thing happening to the S.H.I.E.L.D. he created.

"So, just leave it all to me, Pierce, and I will make SHIELD return to its original form!"

Nick Fury said.

Isn't it originally like Hydra?

Calm down, Fury!

Pierce was really afraid that Nick Fury would find something through his investigation. Nine out of the ten agents of Snake and Shield were Hydra, and it would be too easy for Nick Fury to find out something during his interrogation.

"Well, Fury, in order to avoid causing panic, this investigation will be conducted on a small scale."

Pierce said quickly to Nick Fury.

For a small-scale investigation, interrogators must be arranged, which is easy to manipulate.

Situations like the prisoner's dilemma just don't work for HYDRA agents.

Nick Fury thought for a while and finally agreed.

This method is the best. Nick Fury does not want to cause panic within SHIELD. After all, this kind of review will be very damaging to the normal work of SHIELD and the morale of the people. It is especially fatal to morale. .

And he subconsciously didn't think there would be too many Hydras in SHIELD, just need to find out the part of Hydras.

Then Nick Fury returned to his office, he opened the drawer, and there was a document inside.

On it was the line "Avengers Plan".

"If this plan is proposed now, it should not be rejected."

Nick Fury has been trying to gather those guys with super powers in the world, and then deal with all the super-standard threats!

This is the idea that came after he saw the power of Captain Marvel. Captain Marvel alone can force back the Kree fleet, which gave Nick Fury a great shock.

And now, there happens to be such a guy with super powers in public.

Emperor Luther.

A talented and super genius who came out of nowhere, Nick Fury thinks he is more talented than Tony Stark.

Invented a human transformation technology that is more powerful than the super soldier serum. Here we are not talking about the garbage like Superman Drug and Compound No. 1, but the technology that directly acts on Luther himself.

Incredible strength, invulnerable to weapons, lightning fast, and has the ability to attack with energy!

If he didn't know that these abilities couldn't appear on naturally mutated mutants, Nick Fury would have suspected that he was a mutant disguised as a human body modification.

Chapter 123: Iron Suit Birth

The only creature that can suppress Luther is probably the green giant created by General Ross and has been hunting.

There are so many superpowers in Hydra, and there are superpower terrorist attacks. Nick Fury thinks Luther should be able to deal with these superpowers. His super bodyguards can compete with these superpowers, forcing so many invisible rich people to hire super bodyguards to protect their safety.

Not to mention Luther himself, and he is so talented that he will definitely conduct research and countermeasures against the superpowers of Hydra.

Maybe Luther has upgraded his human body modification now.

The threat of Hydra is imminent, and Nick Fury doesn't think the Security Council will reject his Avengers plan.

But how to win over Luther to join the Avengers is still a problem.

He is so young and so talented, he must be arrogant, you can imagine Tony Stark specifically.

That is definitely not easy to deal with, and more importantly.

They can't establish a demand relationship.

Luther has such a strong strength at a young age, and he has established a wide network of contacts through the terrorist attacks of Hydra and the super bodyguards. Of course, the most important thing is his strength. America thinks that without an armored division, it is impossible to solve the problem.

Strength, technology and capital can give you such a voice. Otherwise, if you only have technology but no strength, it would have been divided up by the dark hands.

What is SHIELD worth for Luther? Instead, it is Nick Fury who is jealous of their technology and strength.

In the absence of a demand relationship, Nick Fury does not think that he can convince Luther with righteousness.

Luther relies on the terrorist attacks of Hydra to make a lot of money and is very happy. It is probably difficult to expect him to attack Hydra.

He does not care about public opinion. After all, it is not that no one has said that Luther should take the initiative to deal with the superpowers of Hydra if he is so powerful.

It can be seen from this that those invisible rich people and capitalists are launching their own public opinion offensive, but Luther still has to do what he should do.

Ordinary people are of course happy to eat melons, who makes the unlucky ones the rich and capitalists who are targeted.

They wish that as many people as possible will die.

"We can only try to contact them first."

Nick Fury thought.

On the other side.

Tony Stark's place of suffering.

Tony Stark used the materials of the Jericho missile to make him an iron suit.

It was a very simple Mark 1, and unlike the environment in the cave, he now had relatively advanced equipment, such as high-temperature furnaces, alloys, etc., so Tony Stark did not need to rely on simple manual forging to forge.

The strength of forged materials is not as good as that of high-temperature cast materials.

"Is it finally done? I was about to fall asleep."

Luther saw Tony Stark wearing the iron suit.

At this time, the iron suit already looked like Mark 2, not as simple as Mark 1 in the original plot.

Of course, if you want to say, it is closer to the shape of War Machine, and there are many hot weapons made by Tony Stark himself on the outside.

The chemical explosives used in the Jericho missiles became the charge of these hot weapons, so their power was naturally more terrifying.

After Tony Stark put on his iron suit, he kicked the door open. Several fully armed people stationed outside immediately looked over and were stunned when they saw Tony Stark in full iron armor.

But Tony Stark was not stunned. After being injected with Compound No. 1, he is now an ace pilot, and his reaction speed is far better than that of ordinary humans.

So Tony Stark directly fired a needle missile, which was the size of his ex-wife.

"Boom!!!"

The entire passage was instantly engulfed by the explosion and shock wave. Even if these people were superhumans, they were killed without a complete body in such a shock wave and closed environment. Their bodies were directly torn apart by the shock wave.

Let alone humans, even steel would be very fragile in this situation.

Tony Stark was originally prepared to kill all the people and face the superpowers of Hydra, but he rushed out and found that only those few people were guarding the base, and there was no one else in the base.

He was a little surprised, but after thinking carefully, it seemed that it didn't take many people for several superhumans carrying thermal weapons to guard him, a superhuman without thermal weapons?

"This is just a den of Hydra..."

Tony Stark hurriedly ran out of the base and found that there was a vast desert outside, with no signs of life at all.

He almost thought he had come to a place like the Sahara Desert.

Fortunately, he prepared the power of flight, so Tony Stark pulled the joint structure behind him, and suddenly billowing smoke sprayed out from his feet, and he flew up, and his heavy body weighing more than hundreds of pounds flew into the sky!

Compared with the Mark I in the original plot, this iron suit has stronger power. After all, the prepared production materials are missiles, and the propulsion and distance are certainly not comparable to the original simple conditions.

So Tony Stark flew a long way, and even the main structure was not broken after falling to the ground, but only a few screws fell off.

Then he walked for hundreds of miles, and when the superhuman body was about to collapse, he encountered mold.

At this time, Tony Stark finally knew where he was.

Afghanistan!

Hydra's lair is in Afghanistan?

The news that Tony Stark was found shocked everyone. The falling stock market of Stark Industries also rebounded because of the news. It did not rise for the time being, but just stopped falling. The main reason was that Tony Stark had not shown up yet, and no one knew whether the news was true.

Galvatron had made a lot of money from the stock market of Stark Industries during this period, and also got a lot of shares given up by shareholders.

Although Obadiah was also recovering the shares from shareholders, he was not prepared this time. In addition, Galvatron was rich and powerful, and he embezzled the money in the unnamed accounts of banks such as Citibank. Obadiah was no match at all.

Now, Luther has become the second largest shareholder of Stark Industries in public, and even Obadiah does not have as many shares as him.

Although Monarch Company is now very rich, the shares of Stark Industries are also valuable.

In the opening of Iron Man 1, when Tony Stark was selling missiles to the American military, there was a shot where Stark opened a box of wine and said, "I will give you a box of this wine for every order over \$500 million."

From this, we can see that the value of this transaction is over \$500 million, let's just say \$500 million.

Because it is a big order that Stark needs to personally take action on, we estimate that there should not be too many such orders, let's just say 12 orders per year.

Chapter 124 Tony Stark's Fear

The bulk weapons trade with America generates an annual revenue of US\$6 billion.

In addition to large orders, there should be some small orders. According to the 28/20 principle, the overall proportion may be relatively small. It is believed that it is only 1/4 of the large orders, that is, 1.5 billion.

According to this, Stark gets \$7.5 billion from America every year.

Considering that Stark Industries is America's largest partner, America's external military spending has reached approximately 85 billion in 2006, accounting for only 10%, which is still conservative enough. (The value of 85 billion is also based on estimates. Of the approximately 150 billion in weapons and equipment and research and development, procurement accounts for the majority, which should exceed 80 billion.)

In addition, Tony's business partner in Iron Man 1 secretly sold weapons to third parties, so there are also many Stark K Group customers in overseas markets.

Judging from the fact that the gathering place of Ten Rings is filled with weapons from the Stark Group, there is probably quite a lot of them.

Let us assume that this segment is relatively small, accounting for only 1/10 of weapons sales, about 800 million. Stark Group's military and industrial sector has revenue of approximately 8.3 billion.

Military and industrial enterprises are famous for their high profit margins. Generally, it is possible to achieve a gross profit margin of 60%-70%, and a net profit margin of 30% is not excessive. According to this, the company's military and industrial profits are approximately 2.5 billion.

In terms of net assets, based on an ROE estimate of 30%, Stark's net assets are about US\$15 billion.

Of course, net worth is not a general measure of high-tech companies.

Although this company already has huge assets, in terms of its attributes, it is not considered an asset-heavy company. It should even be classified as asset-light, as you can see from the fact that it only has a few thousand employees.

The American stock market has always been known for its stable and reasonable valuations (mainly compared with A-shares...), but its preference for high technology is also obvious to all.

For such a military and energy company that constantly exudes innovative vitality, is it too much to value it at a price-to-earnings ratio of 20-25 times?

Just look at the growth rate of America's military expenditure every year.

Stark's market value is approximately US\$90-112.5 billion, which is equivalent to when Facebook first went public.

For such a company worth hundreds of billions of dollars, doesn't Tony Stark have a net worth of hundreds of billions?

Not really.

Stark Industries is a public company, and the public plays a large part in it.

One direct evidence is (it is said that I have not researched it) in the comics, Stark Company was secretly acquired by SHIELD until it became the company's controlling shareholder, forcing Stark Company to produce weapons for them.

Looking at it this way, Stark's own shareholding in the company may be less than 50%, and since the company's board of directors can also control Stark, I am afraid that the total of other major shareholders will exceed Stark's own share.

A rough estimate is that it holds 30% of the shares.

Of course, Obadiah holds 13% of the shares, which gives Tony a larger say in the company. As long as he has Obadiah's support, Tony can make most of the decisions.

The remaining third shareholders and other shareholders combined did not exceed single digits. Galvatron spent a little thought and money on the acquisition. After all, those shareholders could not bear the continued shrinkage of their shares worth hundreds of millions.

No matter how much they wait and see, several months have passed, and they will probably suffer a complete loss if they can't wait for Tony Stark to come back.

"I didn't expect that both the military and SHIELD would hold shares in Stark Industries. It's not easy to continue to acquire and increase their holdings."

Although Luther wanted Tony Stark to work for him, the problem was that the military seemed to be wavering, but SHIELD did not.

Using his connections in the military, Luther's current shareholding in Stark Industries has reached a terrifying figure of 25%. The military has sold almost all the shares to him, and the remaining ones who have not sold are all stubborn guys, but it was so insignificant that Luther was too lazy to ask for it.

S.H.I.E.L.D. holds at least 10% of the shares.

It can be said that Luther and Galvatron have acquired everything they can.

Now, with Tony Stark back and Stark Industries' stock market recovering, they're about to make a killing.

Tony Stark returned to America on a military plane, and when he got off the plane, he saw Pepper Potts greeting him.

After some tenderness, Tony Stark couldn't wait to eat cheeseburger, which was his favorite.

At the same time, Tony Stark also has to deal with all kinds of troubles after his disappearance.

But this time Tony Stark did not announce that he would close the weapons department of Stark Industries.

The main reason is that Luther did not completely follow the original plot, and Tony Stark could not see that the Ten Rings used their own weapons to harm civilians in Afghanistan.

It can be said that Tony Stark has not yet awakened the heart of a hero. He is still the playboy. At most, he is the playboy who has developed the steel suit.

The great success of the Iron Suit made Tony Stark dive into the basement to conduct research after returning.

After the public appearance and confirmation of Tony Stark's return, Stark Industries' stock market immediately soared and returned to its original position, with not too much fluctuation.

"Even though he didn't have the materials to build an arc reactor, why did he still have the idea of an arc reactor? I thought he would use superhuman power to drive the steel suit..."

Luther watched Tony Stark's progress through Galvatron as if he were watching a live broadcast.

He was very surprised when he saw Tony Stark knocking out the arc reactor.

In the "Hydra" base, Tony Stark did not obtain the materials for the arc reactor, so he relied entirely on his superhuman physique to drive the armor.

After the results came out, Tony Stark still developed the arc reactor.

But it seems normal. Tony Stark probably wouldn't just want a heavily armored unit that can only walk on the ground. Wouldn't that be a living target?

The reason why Tony Stark is so obsessed with the Iron Suit now is that, in addition to the fact that the Iron Suit itself is an obsession, he also sees the hope of surpassing Luther in the Iron Suit.

He couldn't even study Luther's No. 1 compound, let alone the human body modification technology Luther used on himself. In addition, there was the imminent threat of Hydra's superpowers, even if he returned to Amélie. The card cannot be secure either.

He was taken away in America and went as far away as Afghanistan.

So now Tony Stark is extremely insecure.

The steel suit was his only hope. Before that, Tony Stark even thought about asking Luther to transform his body. He did not ask Luther to use the most advanced technology to transform him. At least it would allow him to protect himself. ability.

Now, Tony Stark is confident that his steel suit can protect him and Peppa.

Chapter 125 A Chance Encounter in the Sky

Tony Stark quickly developed the Mark II, also known as Mark Two.

Most of the unnecessary things about the Mark 1 have been streamlined, and then it looks very much like a first-generation war machine, with heavy firepower and heavy weapons!

"It seems like he is suffering from a phobia of insufficient firepower? But does Stark Industries still produce small arms?"

Luther was a little surprised. The sniper rifle behind Tony Stark seemed to be designed to target people with super powers. The muzzle that could fit two fingers into looked scary.

Without the Gatling on the back of the war machine, Tony Stark felt that high-precision, high-penetration and high-speed weapons were better against superpowers, so he installed a sniper shoulder gun for himself.

It's not that Tony Stark doesn't want to use energy weapons, but that energy weapons are flashy and consume too much energy. Especially in an environment like below the atmosphere, the lethality of live ammunition weapons is still very trustworthy.

Although Tony Stark doesn't know how Luther managed to transform himself to ignore the 7.62mm caliber automatic rifle shooting at close range, but now he is equipped with this 14.5mm caliber anti-material sniper shoulder gun, which he designed himself. No matter how strong Luther's body is.

It's comparable to steel, even Tony Stark is confident of breaking through it!

After all, it's impossible for Luther's body to be more exaggerated than the armor of a tank, right?

In the experimental stage, this gun can penetrate a homogeneous steel plate with a depth of 80 mm.

If a special warhead is used, such as China's tungsten core armor-piercing warhead, the penetration depth will be even greater.

Tony Stark's Mark II had just been manufactured, and he couldn't wait to put it on and fly.

"That guy Luther, it's impossible for him to fly, right?"

Tony Stark enjoyed the feeling of flying, and then thought of Luther.

It is beyond imagination that human body modification technology can use energy attacks, not to mention that the intensity of that energy attack has reached the strength of a howitzer. As for flying, it requires even more terrifying energy. How can the human body produce such a huge amount of energy? energy?

Tony Stark couldn't imagine the answer.

"What are you?"

Suddenly, a voice came from beside him.

Tony Stark was startled.

"Sir, a UFO has been detected next to you and cannot be identified. If he hadn't suddenly spoken, we wouldn't have discovered it at all."

Jarvis's voice sounded a step slower.

At this time, Tony Stark couldn't care less about Jarvis. He quickly turned around and found that it was the guy he was talking about just now.

Emperor Luther!

This guy was holding his hands, floating in the air, looking at himself curiously.

"You actually...can fly?"

Tony Stark was shocked.

Just now I was proudly saying that Luther would never be able to fly, but now Luther is flying.

"This is strange. Are you flying too?"

Luther said nonchalantly.

"How can this be the same? I rely on technology to fly!"

Tony Stark said with wide eyes.

"Then I also rely on technology to fly."

"I am a machine, a power source, and there is a propeller behind me. This is normal!"

"How funny. It makes it seem like I'm not the same. My whole body is made up of propellers. I can't fly as normal as you?"

Tony Stark was speechless, and then he landed on a roof, followed by Luther, floating to the ground, looking indescribably handsome.

Tony Stark watched Luther's movements closely, and Jarvis helped analyze it, and then ruled out the role of the black armor-like clothes on Luther.

Because Luther didn't need to bear the impact when he landed, it felt as if the impact didn't exist.

"I'm Stark."

Tony Stark opened his mask and revealed his identity first.

To outsiders, the name Tony is his nickname. Only people close to Obadiah, Pepper Potts, and Rhodes can call him Tony. His full name is Anthony Edward Stark.

"It turns out to be you, no wonder... So this is the latest product of Stark Industries?"

Luther said with his hands crossed.

He was taller than Tony Stark imagined, so much so that Tony Stark had to raise his eyes slightly when wearing the steel suit, which made him very uncomfortable.

"That's right, how about it? Neither your super bodyguard nor Hydra's superpowers can be a match for this Mark 2."

Tony Stark said proudly.

"Yeah, let me try."

After Luther finished speaking, he took action, and Tony Stark did not stop him. He generously allowed Luther to reach out and pinch the steel suit.

"Crack!"

An unpleasant sound immediately came from the gold-titanium alloy shell of the steel suit.

"Oh, sorry, Mr. Stark, I didn't know this thing was so fragile."

Luther said quickly.

"Sir, the damage level of the steel suit has reached 5%! Please pay attention!"

Jarvis promptly reminded.

Tony Stark looked at his arm with a dull expression. The piece of alloy was deformed by Luther's pinch. Because it was tough enough, it was not broken, but it looked more mocking.

"This is gold and titanium alloy!"

Tony Stark's eyes widened. Although it is not the strongest alloy among humans, this thing is also an alloy used to make satellites. Tony Stark is attracted by its ability to adapt to temperature differences and strong enough defense.

He does not think that his technology is not good, but Luther's technology is too amazing.

If it was before, Tony Stark would still say that he has a better one, and this is just a trial work in the experimental stage.

But now Tony Stark will not do that.

"How is this possible? How did you do it?"

Tony Stark is eager to know the answer.

Luther was a little surprised that Tony Stark did not say anything. He just thought that if Tony Stark said anything, he would say that he was looking forward to his official work, and then crush his official work.

At that time, he would urge Tony Stark every day to see how long he could say anything.

Unexpectedly, Tony Stark did not respond, which disappointed Luther.

"This is a trade secret, Mr. Stark."

Luther smiled and said.

Tony Stark took a deep breath and couldn't get angry.

"Humph, it's nothing great. Sooner or later, I will develop a more advanced suit, and your technology will lag behind."

Tony Stark said.

"Then I'll wait and see."

Luther smiled and nodded.

Tony Stark returned to his home angrily, and then began to study Mark 3, which will be called the Anti-Luther Suit from now on!

No, this seems a bit too straightforward, so it's called the Anti-Emperor Suit!

Chapter 126: Making trouble and guiding Tony

The encounter between Tony Stark and Luther in the air was naturally not noticed.

Tony Stark wouldn't go around talking about it either.

However, Tony still has a clear idea about whether the Iron Suit is the latest product of Stark Industries as Luther said.

That's impossible!

The steel suit can only be his own!

After all, Luther had already set an example and demonstrated it himself.

Of course, the most advanced technology is used by ourselves, and after several generations, it will be the turn of others.

Tony thought so too.

Even Tony feels that after a few generations, the Iron Suit may not be sold.

The main reason is that the Steel Suit is completely different from Compound No. 1.

The steel suit can fly, and its mobility is superior to most current military weapons. It can also carry anti-tank and anti-construction weapons, and it is very powerful for stealth attacks.

Of course, the radars and air defense systems of various countries are not always available. At present, steel suits do not have the ability to evade supersonic missiles.

But a single soldier can completely infiltrate without a single weapon, and no matter how many single soldiers there are, it won't be enough to kill him.

When armored units are dispatched, they are difficult to lock on and are not as flexible as steel suits, not to mention that steel suits can carry anti-armor weapons.

Tony felt that it didn't matter how much Compound No. 1 was sold, he could suppress these super soldiers with just one steel suit.

On the contrary, the steel suit cannot be sold, which would change the war situation too much.

Luther stimulated Tony, with the purpose of getting Tony to actively accelerate the strength of the steel suit.

Tony, who developed the Iron Suit, is almost entering the state cursed by knowledge, but he hasn't completely let go yet.

When the time comes, he develops an anti-Luther suit, increases his strength a little, and explodes his steel suit.

Luther can play this kind of game happily for a long time.

Next, everything seemed to have returned to calm. The big shots were all equipped with super bodyguards, and Luther could no longer carry out Hydra terrorist attacks. In that case, the super bodyguards might not be able to protect those big shots.

It's okay to act, but there's no need to put yourself in it, otherwise it wouldn't be called acting.

What's the point of beating your own people?

"Hydra seems to be too busy lately, why don't you find something for them to do?"

Luther thought thoughtfully. If he targets Hydra, he can see a lot of fun. For example, Pierce will lose his hair and the entire S.H.I.E.L.D. will be busy.

But this thing has to be mastered to a certain extent. If it gets too desperate, Hydra might plan to kill Nick Fury and dominate the world.

Because the battleship of the Insight Project has not yet been approved, it cannot be launched into the air after it is built.

"How about destroying these insight battleships first, and then Hydra's patience will have no bottom line, and then it won't be afraid of anything?"

Luther came up with a good idea. When he had the ability to make a comeback, Hydra might not be able to bear it. If he didn't have the ability to make a comeback, even if he slapped Hydra's face hard, he probably wouldn't dare to fight back, right?

What he likes most is the way others look at him and feel displeased and unable to do anything about him.

"But it would be interesting to let the Insight Battleship take off and then destroy the Insight Battleship when they are complacent and see their desperate expressions?"

Luther had a new idea.

Both ideas were so interesting that Luther didn't know which one to choose.

"At this time, I am very envious of Gu Yi. Being able to see countless possibilities in the future must have been a lot of fun, right?"

Luther thought with envy.

Next, because Tony didn't know all aspects of Luther's data, he used the hardest alloy material possible and it was composite armor.

That is to say, multiple alloy coatings are combined to greatly improve the defense, and structural mechanics is also used in the details. Each piece of armor is welded bit by bit using alloy powder and laser welding technology.

Not only does its defensive power far exceed that of the Mark II, it is also very expensive.

More importantly, he installed two arc reactors to increase the output power of the Mark 3!

After all, this Tony has not experienced being penetrated by his own missile Heartbreaker, so he is not crazy enough to install a reactor in his chest.

Not to mention that Tony also built a radiation protection layer for the reactor because he was worried about the problem of palladium poisoning in the reactor.

Two arc reactors, coupled with structural mechanics, allow the steel suit to transmit greater force. Now Tony can grab a car with one hand, lift a tank with both hands and swing it to hit people.

But this was not enough. Luther's behavior of easily crushing the gold-titanium alloy made Tony study it repeatedly and felt that Luther's grip strength was probably not comparable to the maximum output of a hydraulic press. He could not understand how a flesh-and-blood body could reach this level.

But this does not affect Tony's targeted research.

The result was that Tony couldn't figure it out, and the advice given by Jarvis was not to fight Luther in close combat, as he would die miserably.

Or make a bigger and stronger steel suit!

Even so, it is possible that it will be demolished by Luther.

Tony, who was in a very unhappy mood, finally flew to Afghanistan on the Mark 3.

He planned to find Hydra through that lair base.

But so much time has passed, and everyone in America knows that Tony has returned, so it's hard to say what useful things are left in that base.

But Luther, who had been keeping an eye on Tony, took the opportunity to stir up trouble.

"We can guide Tony to discover the weapons of Stark Industries of the Ten Rings..."

Luther thought about it, and then went to arrange it directly.

For example, let the terrorists of the Ten Rings appear here and be discovered by Tony.

Tony drove the Iron Man suit to his previous location. Although he did not have a map, Tony was not an ordinary person. In addition, after he became a superhuman, all aspects were strengthened, and the memory ability of the brain was also strengthened. He remembered all the details clearly.

"Sir, someone was found at the coordinates."

Jarvis reminded.

Someone?

Could it be Hydra?

Tony suddenly became excited. For him, it would be a good thing to meet Hydra. With the current Mark III, Tony was only afraid of armored units, air vehicles and Luther.

As for other superpowers, as long as they did not reach the level of Luther, Tony would not take them seriously.

So he landed directly at the target location, and then saw a group of militants full of local Afghan characteristics.

Could it be that the local Afghans discovered something special here and came to check it out?

Chapter 127: Contrast

These terrorists were also very panicked when they saw Tony, and they pointed their guns at them.

As a member of the Free Democratic Republic, Tony was arrogant to liberate Afghanistan and let them gain freedom, so after seeing these Afghan terrorists, Tony didn't mind killing them.

Just use them to experiment with his Mark III!

"Bang!"

Then one of the terrorists was blown away by Tony's palm energy cannon. Because it was powered by two arc reactors, the power of this palm energy cannon was also very strong, which was different from the non-lethal palm energy cannon in the original plot.

Now there are so many powerful superpowers and imaginary enemies Luther, Tony has improved his palm energy cannon and chest energy cannon.

It is set to be an electronic device that uses particle beam technology to launch repulsive explosions. It is a particle beam weapon, officially called repulsion ray.

It can project high-density muon beams as a "defense method" and is also used to keep the body stable during flight.

Although it is a "defense method", this weapon is also one of the offensive tools of armor.

In addition to repelling solid matter and offsetting energy attacks, it can also penetrate steel by adjusting the power output, blow a big hole in the mountain, or directly evaporate the enemy.

Now that it has been focused, even the lowest power can easily penetrate the highest-level plug of the bulletproof vest.

The terrorist who was hit by a shot had his chest vaporized and evaporated directly, leaving a hole large enough for an adult's fist to pass through, and his back could be seen clearly!

The other terrorists were startled and quickly fired at Tony frantically, but the bullets did not even scrape off Tony's paint.

Tony looked at them with contempt, then used the thrusters on his feet to exert force, rushed forward in an instant, and smashed a terrorist's head with a knee strike. The cervical vertebra was even cracked because it was too tough, and a part of it was exposed to the air, pulling the nerves and flesh.

Then Tony made a low-altitude rotation and fired two palm energy cannons to kill two terrorists. One of them had half of his head evaporated. The other terrorist screamed, and there was now a big hole in his pot-bellied stomach, and all the squeezed internal organs flowed out at once.

Tony frowned. The palm energy cannon was very powerful, but the scene was too bloody.

So he tried his best to use his fists and feet to attack. With the output of Mark III, one punch would smash the opponent to pieces.

However, the group of terrorists quickly drove away. Tony thought about it and let them escape. He planned to catch up with them and find their base to destroy it, which would also be a relief for the local American garrison.

The terrorists were controlled by Luther's mind and ran all the way back to the base of the Ten Rings Gang.

When the Ten Rings heard that an invulnerable monster had come, they were ready to face a formidable enemy. They had seen the strength of their boss, and in the current world, who didn't know that the superpowers of Hydra were invincible and had attacked the big shots of America many times, but they had not been defeated until now?

So they didn't think their men were lying, and then they saw Tony falling from the sky.

Tony fell to the ground, Jarvis scanned the surrounding scene, and then Tony's expression changed.

Because he saw a lot of weapons produced by Stark Industries around!

"How did you get these weapons?"

Tony used the translator of the Iron Man suit and asked.

Of course, the terrorists would not answer him, and a vehicle-mounted machine gun on a transport vehicle fired directly at him.

The M2 machine gun roared and spit out flames. As a machine gun that has been in service for many years and is still in service in the American military, its performance naturally needs no further explanation.

This large-caliber machine gun, which was born in 1921, has been in use for a hundred years today.

With an effective range of up to 1,800 meters, it can effectively suppress the attacker in a static defensive battle and cause effective damage to armored vehicles with weak defenses.

Ordinary field fortifications cannot block the attack of the M2 large-caliber machine gun. .50 ammunition can easily penetrate field fortifications made of wood and sandbags.

But in the face of such a hail of bullets, Tony did not dodge. His iron armor now exceeds the weight limit. His own weight can make him stand firmly in place even when facing the baptism of M2 Lao Gan Ma. He can also calmly raise his hand and kill the opponent's machine gunner with a palm energy cannon.

Even if there is a thick baffle, it is useless. A palm energy cannon destroyed it.

What is left is a massacre, but Tony still left a few alive because he wanted to know why Stark Industries' weapons appeared here!

He developed these weapons for America to win, liberate and free the country, but now the terrorists have also obtained his weapons, even if they lack launchers and launchers.

Could it be that they are related to Hydra?

Tony began to think about it. The main reason was that Hydra could even get the material list of his Jericho missiles. It seemed that it was not difficult to get these weapons?

Tony didn't want to let go of the clues of Hydra after finally finding them.

As a result, these terrorists of the Ten Rings didn't know Hydra at all. If they could contact Hydra, the Ten Rings would not live in a place like Afghanistan with harsh conditions.

"If it's not Hydra, then how did you get these weapons?"

Tony asked.

"I...I...am...a..."

The terrorist who was lifted up in the air said a name with difficulty under Luther's control.

Galvatron has already found out what name and identity Obadiah used to contact the Ten Rings. As long as Tony keeps tracking, he can find out these things.

And Luther will naturally not let Tony find out these things so easily. It would be a pity if Obadiah could not become the Iron Monger in the original plot.

So Luther will let Obadiah know about Tony's iron armor and Tony's investigation of the source of the Ten Rings' weapons.

After all, because Tony did not announce the closure of the weapons department, Obadiah only came to meet Tony, and it was not clear what Tony was tinkering with.

"Iron Monger is not enough to fight the current Mark III, so just give Obadiah a Steel Monger!"

Luther likes to use Tony's setbacks to set off himself. At that time, he will let Obadiah press Tony to the ground and rub him, and then he will press Obadiah to the ground and rub him to show his strength!

So, that night, Obadiah, who was playing with some young models, was suddenly taken away from home.

Chapter 128 The Hydra is so terrifying

Obadiah shivered and huddled in the corner of the room.

He was kidnapped.

Then after spending a night in the cold and darkness without clothes, he was thrown a piece of cloth and met his kidnapper.

A man so famous that the whole of America is frightened - Black Caesar!

The identity of Black Caesar was naturally not Luther's own. He actually wanted to call him something like Darkseid, Lord Shafrin, or something like a joke.

But Luther didn't dislike the name Black Caesar either.

Galvatron collected and analyzed data on his behavior and thinking. Luther was very aware of it, but he didn't care.

If one could control oneself through actions and thoughts, wouldn't Luther's invincible power have been planned for so long in vain?

The most important thing is that Luther doesn't care about Marvel things at all. If Galvatron tries to control him, he will only get a smashed chessboard and an overturned table. Not to mention that Galvatron's core program chip is still controlled by Luther. .

"Hello, Mr. Obadiah."

Luther was wearing a mask. The faceless mask and the dark holes made it impossible for Obadiah to judge his thoughts and emotions through his expression.

Although there is a way to prevent Obadiah from recognizing himself without wearing it, Luther prefers to let Obadiah face this unknown fear.

"...Mr. Black Caesar, what do you want from me?"

Obadiah said weakly. He was already over fifty, and he was pampered. The torture last night had already made him feel like he had lost half of his life. Even if Luther just made him claustrophobic, there was no such thing. Claustrophobia, what to be afraid of.

So Obadiah surrendered without any persistence.

"Anthony Edward Stark."

Luther said a name.

Obadiah's expression changed.

"If you, Mr. Black Caesar, want to continue kidnapping Tony, I can cooperate!"

Obadiah chose to betray Tony without any psychological pressure. After all, his own life was the most important thing.

"No, no, no, we are not interested in Tony. We just want to cooperate with Mr. Obadiah."

Luther snapped his fingers, and a virtual screen suddenly appeared in front of Obadiah.

Obadiah was startled. He had never seen such high-tech technology before, and he didn't expect Hydra to have such technology.

Then he saw Tony find the Ten Rings Gang and massacre the Ten Rings Gang, and asked about the identity of his cooperation with the CIA, the Taliban and the Ten Rings Gang.

"Is this...Tony?"

Obadiah looked at the Iron Man on the screen in disbelief. What happened to this body of steel? When did Tony come up with such a weapon?

"Yes, this is Mr. Stark. There is no doubt that he is a genius. He was able to invent such an epoch-making weapon."

Luther said meaningfully.

Obadiah's face suddenly changed slightly. He had just been shocked by this weapon, especially after seeing Tony fly up at a very fast speed. Obadiah subconsciously thought that this weapon would open up an era for the future world. weapons.

Just like the first tank, the first bomber, it was a revolution and a new chapter in the age of weapons.

But after Luther said this, Obadiah remembered that Tony had already found out the identity he was pretending to be.

So with Tony's level of genius, what happens next?

Obadiah almost didn't need to think about it to know that his identity would definitely not be hidden from Tony. Tony didn't even need to bother to check his disguised identity, because the circulation of those weapons requires someone with real authority in Stark Industries. Heavy people.

So who is it?

Besides Pepper Potts, there is only him Obadiah Stane!

He had no doubt Tony would have thought of that.

"Mr. Black Caesar, why don't we be more direct? What do you want from me?"

Obadiah is not as powerful as Tony in terms of weapons, but in this case, he made a judgment very quickly.

"It's very simple. Let's work together. I'll help you take down Mr. Stark, and then half of the weapons that Stark Industries gives to the Taliban and the Ten Rings gang will be given to Hydra every year."

Luther said.

Of course, weapons are definitely impossible. Emperor Company now has its own weapons department and can independently produce weapons, guns and ammunition. He did this just to convince Obadiah.

"I have no choice, right?"

Obadiah said.

"That's right, Mr. Stane. Next, you will undergo a minor operation. Don't worry, it's not life-threatening."

Luther said with a smile.

"May I know what the surgery is?"

Obadiah paused.

"I personally think it's better not to know. This minor operation is just to ensure our cooperation."

Luther's words let Obadiah know, and it was probably a way to control himself.

However, he couldn't refuse.

Half an hour later, Obadiah woke up from anesthesia.

He looked in the mirror and saw a shallow scar on his bald head.

"Don't worry, this scar will disappear completely in a few days, and we will not leave any traces of the surgery."

Luther said.

"So, what exactly is this surgery?"

Obadiah dared to ask at this time, because he was already half one of his own, right?

"A human bomb is a miniature bomb that is linked to your brain waves. Once it is taken out, your brain will explode. Even a tank within fifty meters will be blown over. And we also have control methods."

Luther's words made Obadiah couldn't help but touch his bald head. He felt very abnormal now. Even if Luther didn't say anything, he still didn't feel anything, as if he hadn't undergone surgery, but Luther After saying this, he felt something ringing in his head.

"Don't worry, it is usually in a dormant state and will not affect your life. We have used this technology to allow many people to cooperate. Mr. Stan, you are not the first, so there is no need to worry about risks."

Luther comforted.

When he said this, Obadiah not only did not breathe a sigh of relief, but felt very cold inside.

This surgery has allowed many people to cooperate?

How many people are there?

Who are those people?

Reminiscing about the accuracy of every terrorist attack by Hydra, Obadiah suspected that Hydra might have controlled a lot of high-ranking people through this operation. Maybe the bodyguards around those big shots were also controlled. .

If you think about it this way, joining Hydra doesn't seem to be something unacceptable?

Chapter 129 Tony's Fate

It's just that Obadiah knows that he can't be considered to have joined Hydra now. At most, he is a tool of Hydra.

"Mr. Stark escaped from our control with this armor, and then we found his armor abandoned in the desert."

Luther asked someone to take Obadiah to see the Mark I.

After all, what you see in the video is not as good as what you see with your own eyes. Obadiah looked at this masterpiece and was confident that if he could take it back, he would definitely be able to imitate it!

"We have built a more powerful Steel Overlord, but it just lacks key technologies."

Luther then took Obadiah to see the newly released Steel Overlord. The larger size and streamlined armor with no traces of welding made Obadiah overturn his own ideas.

What made him feel even more powerful was Hydra's science and technology. How could they complete the replication so quickly?

"What key technology?"

Obadiah realizes that this may be the key to Hydra controlling itself.

"Arc reactor, or miniature ark reactor."

Luther waved his hand, and a screen appeared in front of them, and then it froze on the front of Tony's steel suit, with two flashing reactors.

"Incredible, he actually achieved it..."

Obadiah was even more surprised.

"The steel suit we developed lacks energy technology, so Mr. Stan, this Steel Overlord can be given to you. As long as you can get Tony's arc reactor technology, you can produce such armor."

Luther said to Obadiah.

"Is that so? I understand."

After Obadiah knew that this was Hydra's purpose, he finally knew what he should do next.

Looking at the behemoth in front of him, Obadiah was confident that he could deal with Tony's little iron man!

The kidnapping of Obadiah did not attract much attention. After Obadiah returned, everyone just thought that Obadiah had gone to play somewhere.

Only Obadiah himself knew what happened, and he sent Steel Overlord to the weapons department of Stark Industries to secretly study Steel Overlord.

He is not afraid of being discovered by Tony. The main reason is that Tony does not pay attention to the weapons department at all. In addition, the scientific researchers and technicians here are all from Obadiah. The confidentiality is very good, so there is no need to worry.

Then the research result is that many of the technologies on this Steel Overlord are incomprehensible to them. It is simply impossible to copy it. The last resort is to copy a castrated product.

And just as Hydra said, this thing lacks a key energy driver.

Obadiah naturally had to find a way to get the arc reactor from Tony, and at the same time abolish Tony's ability to continue using the Iron Suit.

In the original plot, after Obadiah took control of Tony, he didn't kill him but let him wait for death slowly. It can only be said that it was really a confusing operation.

Tony was of course defenseless when facing Obadiah. Even though he had some suspicions that there was a mole in Stark Industries, he did not yet suspect Pepper Potts and his uncle.

Although Obadiah was not his biological uncle, he treated him no differently than his biological uncle. Tony still valued and cared about his family.

"Stan?"

Tony was a little surprised that Obadiah would come to him when he was fine.

"Tony, are you hiding something from me?"

Obadiah came up and said directly.

Tony suddenly looked around with a guilty conscience, praising Obadiah for dressing particularly tastefully today.

Obadiah, who knew Tony's character, took advantage of Tony's unwillingness to hide this situation from him and went directly to Tony's basement.

Tony yelled symbolically without stopping, and then Obadiah saw the Mark 2, Mark 3, and Mark 4 being produced.

"If I don't come, how long do you plan to keep this secret from me?"

Obadiah calmly saw the arc reactor on the table, and then said to Tony.

"Actually, I didn't plan to hide it from you in the first place. I planned to give you a surprise, Stan."

Tony said something dryly that he didn't even believe.

Obadiah talked to Tony for a while, and when Tony was unprepared, he activated a strong electromagnetic wave generator, which can paralyze people's entire body in a short period of time.

The two glowing objects on Obadiah's ears are shields.

Tony fell to the ground uncontrollably.

"Tony, I finally don't have to wipe your ass anymore. If you weren't talented, you would have died long ago."

Obadiah picked up the arc reactor on the table, put it away, and then said to Tony on the ground.

Tony's pupils shrank. At this time, his mind was flexible and he had figured out everything. The one who sold weapons to terrorists was Obadiah!

He never expected that his uncle would actually be the traitor, and he would also do something to him. It seemed that the target was his own arc reactor?

But why, why would he do this?

Tony couldn't understand it.

He then saw Obadiah pull out a handgun and point it at him.

"Goodbye, Tony."

"Bang!"

Obadiah actually had no intention of shooting Tony. He knew that Tony had an artificial intelligence in his home. If he shot him, he would definitely attract attention. However, he got the Ark reactor, cooperated with Hydra, and Iron War. Such a weapon of war.

He felt that even if he killed Tony, nothing could happen. Hydra would solve the problem for him. Even if Hydra didn't take action, Obadiah could make America not hold him accountable by relying on the Iron Man suit.

So there was no reason for him not to kill Tony. Would he let him live and cause trouble for himself?

Of course, if it was Obadiah's nature, he would definitely do it more secretly, instead of directly shooting through Tony's chest like he did now.

Tony felt extremely cold all over, especially after the paralysis effect of the strong electromagnetic wave, he felt his pain and even colder.

Fortunately, at this time, Pepper Pepper came to find Tony and found Tony lying on the ground.

"Tony!"

Pepper Pepper was shocked and rushed Tony to the hospital.

Then the doctor was in a dilemma, because the bullet Tony took was the infamous dum-dum bullet, or a special fragmentation bullet. The fragments flowed in his body and approached his heart. Tony's life was in danger.

This was of course not Luther's arrangement. Luther would not let Tony return to his original fate.

Anyway, no matter what he becomes, it is a good fun for him.

In the end, he did not expect that he would still become what he was before.

Chapter 130 Tony: I can't imagine how I lost

Tony did not receive good treatment. For example, Dr. Stephen, who was invincible in surgery, flew to a foreign country for an operation.

"Mr. Stark is in critical condition now. If he were not a superhuman, he would not have been able to hold on until now, so we must come up with a surgical plan as soon as possible!"

The hospital was also under great pressure. They were a private hospital of Stark Industries. Now their big boss was admitted to the hospital. If they did not do a good job, they would lose everything at best and their family would be destroyed at worst.

Fortunately, Obadiah underestimated the physical fitness of superhumans. Although he himself had also accepted the transformation of Compound No. 1, after all, as a man, after watching that advertisement, no one would not want to become a strong man who could fight five people at once.

But the one who worked best with Compound No. 1 was Tony, and no one else really brought out the effect of Compound No. 1.

Tony also saved his life because of this. His body automatically formed blood clots to block the fragments, and at the same time, it was frantically producing blood to recover from excessive blood loss.

However, while the blood clots prevented the fragments from flowing to the heart, they also endangered Tony's life.

However, Tony regained consciousness, and then he came up with a crazy and bold idea.

He planned to perform his own surgery!

Of course, it didn't mean that he would perform the surgery himself, but that he would design a plan himself.

The boldness of this plan was that he blocked his pain nerves, so that he didn't need to inject anesthesia, so that he could stay awake to command the operation, but it couldn't be considered an operation.

The doctors were shocked after hearing this, but Pepper had nothing to do with Tony now, and Tony, the patient, decided to do this while remaining conscious and awake. What could they do?

They could only listen to their boss.

Phil Coulson, the SHIELD agent who was sent after Tony's accident, wanted to stop him after hearing Tony's crazy idea. Director Nick Fury also planned to do so. He even thought about sending a fighter plane to bring Dr. Stephen back.

However, under Tony's own insistence, Coulson could only guard the door of the ward in the end.

"Oh my god, my Lord, please bless Tony..."

Pepper's persuasion was fruitless, and she could only pray to the Lord anxiously.

Luther said, you should pray to me.

He is in the ward now, but the people inside naturally did not find him.

"Is this the future you see, Master Ancient One?"

Luther suddenly spoke, but no one responded, as if no one else existed.

But Luther was sure that even if Ancient One was not here, he would be watching here, otherwise it would be impossible to explain why Stephen just happened to leave New York. You know, this guy has not moved for many years and has not accepted flying knives.

Suddenly a strange patient came, requiring extraordinary surgical techniques, plus the patient's wealth... everything seems reasonable.

Luther almost believed it.

"Has the future changed, or has it been twisted back to the right track?"

Luther continued to chat, and the Supreme Sorcerer never showed up.

Tony commanded the doctor to complete the operation in such an incredible way, including injecting the Ark reactor.

Luther didn't understand what he was thinking. Obviously, his own constitution had already generated blood clots to block the fragments, so the operation only needed to clean up these fragments and blood clots, but he was obsessed with implanting the Ark reactor to absorb these fragments.

Walter?

It would be strange if Ancient One hadn't done anything. Luther could have thought of more than a dozen ways to deal with this situation.

Of course, it could also be Stan Lee's correction.

So, when Tony came out of the operation, there was a glowing halo on his chest, which looked very special.

Because of his superhuman physical fitness, Tony was able to get out of bed and walk in just a few hours, and his wounds had healed.

After implanting the Ark reactor, Tony cleaned up the blood clots in his blood vessels.

He knew that he was lucky this time because of the superhuman constitution brought to him by Compound No. 1. Otherwise, he would have died without a doubt after Obadiah's shot.

This insidious fragmentation bullet is a modified version of the dum-dum bullet, which is specially designed to attack soft targets. It is no joke to die after being hit by one bullet.

Tony naturally knew that he had to be grateful, but that was the product of the Monarch Company, and he was a consumer, so it was natural. At most, he would urge Luther to quickly launch Compound No. 2 or something.

"Obadiah!"

After Tony and Pepper kissed passionately, Tony remembered what Obadiah had done before.

"Don't worry, Mr. Stark, we already know what happened."

Coulson said that his men had gone to capture Obadiah.

"No, you don't know what you are facing at all. Only I can stop Obadiah. Let your men leave quickly and don't die."

Tony shook his head. From Obadiah's actions, Tony suspected that Hydra had found his original Mark I, otherwise Obadiah would not have just taken his Ark reactor.

If the situation was really as he thought, it would be bad.

He had to get back as soon as possible.

Coulson was confused. In his opinion, his subordinates were all experienced agents. Even if Obadiah had mercenaries and he was a superhuman, he could not deal with his agents.

The director applied for a sum of money so that all SHIELD agents had superhuman drugs and compound No. 1 transformation benefits.

With the same physical fitness, how could it not be solved?

So he immediately contacted Nick Fury and told him what Tony said.

Nick Fury was silent for a while.

"Trust Tony, let them withdraw."

Nick Fury thought of the iron suit that Coulson found in Tony's basement. He didn't know what it was, but it couldn't be a large hand-made toy. Would Tony have such a childlike heart?

Tony knew that Luther had the ability to solve this matter, but he was confident that he also had the ability to solve this matter, so he had no idea of notifying Luther.

He hurried back to his basement. Obadiah must have never thought that he could recover so quickly, and he didn't even know that he was still alive.

"Mark IV!"

Tony looked at his latest product, the battle suit developed for Luther, and couldn't think of how he could lose, except that he might not be able to beat Luther.

After he put it on, he flew out.

"Jarvis, locate Obadiah!"
