

Kryptonian 17

Chapter 17 Doomsday? Broly?

"Doomsday's genes, Broly's genes..."

Luther looked at the two test tubes in front of him.

The liquid in the first test tube continued to gradually change from black to red, and it looked as if it had been polished.

The red liquid in the second test tube was boiling endlessly.

The first test tube contained Doomsday's genes. The failed Kryptonian cells finally broke through the limits and Doomsday appeared!

The famous Doomsday has the power to destroy heaven and earth, jumping power as fast as flying, infinite physical energy that never feels tired, and super-fast healing and regeneration abilities.

During the battle, you can continuously evolve to restrain your opponents based on their abilities and characteristics, adapt to all environments and all enemies, resurrect after being killed, and evolve ways to deal with them, so you cannot kill Doomsday twice with the same method.

Due to a manufacturing problem, it went berserk, unable to distinguish between friend and foe, and became a never-ending killing machine.

The origin setting of Doomsday has changed too many times. Luther doesn't know which version of Krypton he is, so he doesn't know which version of Doomsday will come out.

"Fortunately, only a part of the cells were used for cultivation, otherwise I would have died first if I had produced a Doomsday."

Luther looked at the two test tubes in front of him, and they failed at the point of fusion.

Neither the Doomsday gene nor the Broly gene could coexist. The two genes attacked each other crazily. Luther failed tens of thousands of times. Even after consuming all the prepared resources, there was no way for them to fuse.

So now Luther only has one choice.

Either fuse the Doomsday gene and become a Doomsday Kryptonian. I don't know whether it can succeed. The success rate is only 50%. If it fails, it will directly mutate into Doomsday.

It's okay to turn into a monster, but it may be controlled by the violent instinct of Doomsday's consciousness and lose yourself, which is no different from death.

Either fuse Broly and become the first fusion of Kryptonian and Saiyan in the history of the entire dimension!

The advantage is that the fusion success rate is very high, more than 70%, and the fusion is Broly, the legendary Super Saiyan. The growth and potential are guaranteed. Even if the fusion fails, he will not die or lose himself. .

"The legendary Super Saiyan, or the Doomsday?"

Luther couldn't decide for a long time. He paced back and forth, and another month passed.

Then Luther decided to give it a try.

"The legendary Super Saiyan, I can look for the Super Dragon Ball in the future, and it may be able to fulfill my wish, but the Day of Destruction... that is the Day of Destruction!"

Luther picked up the test tube of the Doomsday gene.

There is no way out for ordinary Kryptonians, so he will no longer be an ordinary Kryptonian!

Luther inserted the test tube into the only soft part of his mouth. Even though he had dispelled the biological force field, the defense of the Man of Steel still caused the needle to deform and crush.

Fortunately, Luther used supersonic acceleration to push the needle. When the needle burst, he also made a minor wound in his mouth. You must know that this needle is made of the hardest earth alloy in the Dragon Ball world.

After successfully injecting the Doomsday gene into his body, Luther felt the tearing pain all over his body!

The cells were instantly eroded by the Doomsday gene. Because they were originally cultured from Luther's own cells, they fused very quickly and did not trigger a crazy counterattack by the immune system.

But then, Luther felt endless power pouring out of the torn cells!

After being torn apart, Doomsday's cells quickly regenerate and become stronger than before, becoming extremely resistant to the forces that previously ripped apart his cells.

Hardened biomass began to appear on the surface of Luther's body, which caused him to begin to transform into a ferocious monster.

However, Luther remained calm and began to intervene using his super brain and biological force field.

From a certain perspective, the biological force field is a universal field that can modify reality and subvert the rules of physics. Many of the outrageous operations of the Kryptonians are actually the effects of the biological force field, such as dragging several planets.

The super brain is responsible for the most delicate and precise operations, targeting the destruction of sun cells.

Luther was even prepared to use the terrifying squeeze of "travel" to crush himself if the situation got out of control.

But surprisingly smoothly, after the super brain and biological force field were added to control, Doomsday's cells did not go out of control, but became part of his body.

A lot of rancid filth fell off Luther's body. These were actually cells in Luther's body. They were eliminated and devoured nutrients by the Doomsday cells, and finally metabolism eliminated them all.

When Luther stood up again, the muscles in his whole body were like steel, and his height had also increased to more than 1.9 meters.

But it's not too strong or bloated, and you won't be able to touch your back.
