

Kryptonian 171

Chapter 171 Big Event

The soldier who was enjoying the fire suppression was soon torn apart by the lizard man's bullets.

The M60 squad machine gun cooperates with the armor-piercing belt. If the bullet hits a person, only one bullet can tear one-third of the human body!

The cavity effect of the bullet is too weak in the movie. In reality, such machine guns and bullets are completely a nightmare for infantry and lightly armored targets!

Not to mention that there are several particularly strong guys among the lizard men, carrying an ammunition box on their backs, and the belt is connected to the M2 machine gun in their hands.

This fires 12.7G) large-caliber ammunition, which is commonly used in infantry-set fire positions and military vehicles such as tanks and armored personnel carriers. The main purpose is to attack lightly armored targets, annihilate living targets and low-altitude air defense.

This is a vehicle-mounted machine gun, a tank's co-pilot machine gun weapon, you can imagine how brutal it is.

The lizard man's counterattack was so fierce and exaggerated that the anti-super-terrorist troops were caught off guard, and dozens of soldiers went directly to hell.

Their bloody bodies were so messy that they couldn't even be identified. Even with dog tags, it was impossible to tell who was who in this pile of flesh and blood.

The machine guns of the Stryker armored vehicles fired, and the lizardmen were caught off guard and fell to the ground.

Fortunately, the armor-like bulletproof vests on their bodies saved their lives.

Even if the machine guns of these unmanned turrets could penetrate the average armor of 110 mm, after breaking through the armor of 50 mm, the remaining bullet power would only tear the lizardmen's internal organs and roll over to create cavities. For the size and regeneration ability of the lizardmen, it was equivalent to a boxer taking a few heavy punches.

As long as they were not hit in the head, they would not die.

"Damn it!"

The lizardmen knew that the Stryker armored vehicles were already threatening their lives.

"Warhead!"

A lizardman shouted, and they all used code names to call each other to avoid exposing their true identities.

The lizardman called Warhead raised the anti-tank missile.

The full name is "Javelin" anti-tank missile!

For the lizardmen, the size of this weapon is not worth mentioning.

The lizardmen locked onto a Stryker armored vehicle, then chose the dive attack mode and fired the missile.

After the missile was fired, the guidance system automatically analyzed the infrared rays that were invisible to the naked eye, continuously identified and tracked the target, and then corrected the flight route and posture to rush towards the target.

The huge tail flame attracted the attention of both sides of the battlefield.

During the launch of the "Javelin", its tail flame will cause certain damage to the personnel in the rear.

The missile tail nozzle is 30 degrees to the left and right, and the rear is about 26 meters. The "danger zone".

Such a small tail flame is very dangerous to humans, and for the lizardmen, it can't even let him move.

The whistling javelin did not give them time to react, and the Stryker armored vehicle was hit on the top and then exploded.

"Boom boom boom!!!"

The loud noise was deafening, and the people in the surrounding houses trembled and hugged their families and covered their ears.

As Americans, they never thought that one day, in New York City, they would hear the roar and explosion from the battlefield!

The Lizardmen did not come to fight with America, their purpose was only to rob the bank, so after completing the operation of robbing the bank vault, they hurried away.

They prepared a 50-kilogram heavy bomb for the bank vault, ready to blow up the security door directly if there was any accident.

They specially chose a bank with a sewer nearby, and even the ammunition was transported in the sewer.

In this encounter, they poured thousands of bullets, destroyed a Stryker armored vehicle, and killed dozens of soldiers.

It seems that the results of the battle are not very good, but in fact it has shocked the whole United States.

For the first time, they realized that their status as the world hegemon and the world police was challenged, and countless people marched and protested.

There are also timid people who plan to return to their farms and leave New York with their families.

They have a hunch that if the federal government cannot solve the problem this time, the situation in New York will only get worse in the future!

"We robbed a total of more than 40 million this time!"

"Hahahaha, if you look at it this way, we will be able to pay off the loan from Hydra soon."

"No, we have too many competitors, and other banks have been robbed."

The most powerful group of lizard robbers are celebrating today's harvest, but the leading lizard man is very calmly watching the actions of his peers on the TV news.

Even with the weapons and equipment provided by Hydra for free, and the tactics of Hydra's tactical experts to guide their tactics, the lizards are inevitably injured and killed. After all, not all the desperate people here are professional fighters.

Nine out of ten people succeed, and this success rate is very exaggerated. The major banks will definitely be affected in the future, and it is estimated that many will declare bankruptcy.

He wished that most of his peers died, so that there would be no competitors, but it is not possible now.

There are too many people and too few banks in New York. They are just the first big harvest, and it will definitely be more difficult later.

"Shit, how many people did Hydra find?"

A lizard man cursed after seeing it.

He originally thought that they were the only ones there, but when he watched the news on TV, he saw that hundreds of banks were robbed in one day?

Damn, are there so many banks in New York? This is the first time he knows about this.

Of course, not all of them are banks. There are also ignorant lizardmen who choose to rob places like jewelry stores. It is easy to rob those things, but it is not easy to cash them out.

A reinforced battalion of anti-super-terrorist troops was divided into so many battlefields, and naturally they were no match for the lizardmen. The big men did not expect that the troops they thought were sufficient would be almost destroyed in one day.

Even if only dozens of soldiers died in one place, and the casualties of soldiers in other places were only in the single digits, it would be enough to wipe out a reinforced battalion.

"We have to change places next. We can't continue to stay in New York. New York has Iron Man, Emperor, and Hulk, and the Federation is expected to go crazy next, and we will be in danger at that time."

The leading lizardman said coldly.

"Then where should we go? If there is no sewer, we will be in danger, right?"

The other lizardmen hesitated.

"Idiot, anywhere is fine. New York isn't the only place in America that has money. Los Angeles is fine, too. There are a lot of banks there!"

"I think we should leave, too. We seem to have made too much of a fuss."

Chapter 172 Interview

Then only a small number of lizardmen chose to leave overnight. As humans, it was difficult for them to be detected, as long as they did not deliberately expose their identities.

In addition, America is a place that respects personal privacy. There are cameras only on highways and at the entrances of some stores, which makes it more difficult to track these lizard people.

They play hide-and-seek with America in the sewers, and they can get away from them by turning a corner and regain their identities.

America was completely angered this time and even implemented unprecedented martial law.

You know, they have never done this before, even when there were many zero-dollar purchases.

The main reason is that the seriousness of the problem is different. In the past, zero-yuan purchases were mostly caused by smashing, smashing, and looting. Now they are on their own territory, and their money is robbed with guns and cannons, and their soldiers are killed!

"It's such a big fuss."

Luther clicked his tongue and said, but it would be unreasonable to not implement military control at this level.

Luther was even interviewed by representatives of the American military.

Of course, this interview was not because they discovered that Luther was Black Caesar. It was because the American military felt the pressure on Hydra to spread the lizardman serum wantonly.

They have seen how powerful the Lizardmen are. In this kind of positional warfare and street fighting, the advantage they can exert is too great. One person can suppress hundreds of people. If it were not for the firepower superiority of the modern army, a Lizard People can completely massacre these hundreds of soldiers.

Just look at the news.

"New York has become a battlefield! Our army is no match for those monsters!"

"You ask why we want to leave New York? Then first tell me where the current mayor is? Oh, he is on vacation in his private estate now. He can run away, why can't we run away? Anyway, New York has become This is it."

"Hey, Lord Mayor, don't go on vacation, come back and promote the majesty of the law!"

The mayor of New York also has something to say. You ask me to promote the majesty of the law. Do I have the fists to promote it? Do I have the force? Aren't those bosses on Wall Street the final say?

This is why America's military sent representatives to find Luther.

"Mr. Luther, I believe you are also aware of the terrible situation that happened in New York City yesterday."

Lieutenant General Alvin Hogg, the plenipotentiary representative sent by the American military this time, said to Luther.

"Yes, it's very bad. It makes me doubt the capabilities of the Federation."

Luther was also unceremonious, scolding others and exposing their shortcomings first, making Lieutenant General Alvin Hogg feel very uncomfortable and annoyed.

"Mr. Luther, I am here precisely for this mission."

However, Lieutenant General Alvin Hogg can be sent to be responsible for this arms sale, and he is also the plenipotentiary representative, so he will definitely not be emotional because of such a small matter, otherwise he would not be able to achieve this position.

Arms sales representative, this is a very lucrative position. As for how abundant it is, Luther already knew through Galvatron that Lieutenant General Alvin Hogg privately had an unnamed bank account with a deposit starting with one billion. .

The annual salary of a lieutenant general is obviously not that much money even if it takes a hundred years.

"This time, I have brought a special mission, Mr. Luther."

Lieutenant General Alvin took out a blue envelope that looked different, and Luther already knew what was inside.

"Mission? That's not a good word, Mr. Lieutenant General."

Luther didn't mean to open the envelope, but looked at Lieutenant General Alvin and said.

"This is an order from the president himself, this is a document signed by the president."

Lieutenant General Alvin didn't pay attention. The document only contained Mr. President's signature and not the actual mission content. It was mainly for confidentiality.

"Forget it, Mr. Lieutenant General, you and I both know that in this country, the President is only the spokesperson, so the legal effect of this document... No, I shouldn't talk to you about the law."

Luther laughed.

"Mr. Luther, I think as a businessman, you wouldn't mind hearing about this deal first?"

Lieutenant General Alvin also laughed and said nonchalantly.

"Please."

Luther nodded.

"Because of the influence of the Lizardmen and the resurgence of Hydra, we need super soldiers."

Lieutenant General Alvin repeated the goal this time.

The general meaning is that they want super soldiers, but they don't want Compound No. 1. What they want is something more powerful, for example, Compound No. 2!

The No. 2 compound is the type of super bodyguard injection. You will die only if you hit the head. If you don't hit the head, you can regenerate and recover. It is just like the lizard people. The difference is that they will not become ugly.

Compound No. 2 was originally a by-product of Luther's own research on Kryptonians. It had nothing to do with Kryptonian genes. It was just that he discovered factors that strengthened the human body and then used them.

The upper limit of compound No. 2 is the S-level in the movie "The Witch". Although Luther injected the super bodyguard with the blocked compound No. 2, this does not mean that he will not be lucky enough to encounter a mutation directly. Unlocked the blockade of Compound Two.

After all, the mutation rates in the Marvel world and DC world are much higher than in other worlds. The main theme is that the poor rely on mutation and the rich rely on technology.

The same super soldier serum can mutate into hundreds of different superheroes and super criminals. This is not Luther exaggerating. Most superheroes and super criminals come from the research and experiments of Captain America's super soldier serum by America or other organizations and countries.

The genetic abilities that the super bodyguards have not yet unlocked are telekinesis and the final immortality. The superpower of the movie heroine's sister is that she will not die even if her head is shot. It is speculated that it should be a cellular or even molecular regeneration ability.

Luther made something similar.

The performance of the super bodyguards is also very good. They can resist the superpowers of Hydra with a large number of people. This is a real record.

Luther remembered that this was also his plan, but he no longer needs the effect of the success of this plan.

Now Luther has a Buddhist feeling. Anyway, he can become stronger by lying down, so why should he work hard?

Isn't it good to have fun?

The American military took a fancy to Compound No. 2, but it was obvious that Compound No. 2 would be more expensive than Compound No. 1. Compound No. 1 was already 10 million U.S. dollars, so it was simply impossible to put it into production in large quantities.

Chapter 173 Military Needs

Although America spends so much on military expenditure every year, it is still public expenditure on the national account, and the support of the consortium has not been calculated privately.

But they are also very distressed to pay such a large sum of money.

If they were not really bullied this time, they would only be able to use bombers and fighters if they come again. For them, it is not cost-effective even if they win, and they are not willing to come to Luther.

Wouldn't it be better to let Iron Man work for free? Iron Man will even compensate for the war damage he caused.

Luther always thinks that this is the result of looking for trouble and having too much money to spend.

He also doesn't care about money, and he has too much money to spend, but he will not be responsible for the damage he caused. What compensation bill, Luther will not care if he dares to send it.

And this time's lizard man attack also made them realize that Iron Man and Luther still have great value in existence.

Of course, this is also because they don't know that the lizard serum is a product of Osborn Industries, otherwise they probably went to Osborn Industries to ask for mass production of lizard serum, to give him a taste of his own medicine.

Norman himself was relieved. He was glad that he destroyed the lizard serum and traded it to Luther.

Otherwise, he didn't know how he would be held accountable.

"Compound No. 2 cannot be mass-produced now. The cost has not been reduced. The funds spent on the research of Compound No. 1 have not been recovered, so I don't plan to mass-produce Compound No. 2 for the time being."

Luther shook his head and said.

To put it bluntly, the value of Compound No. 1 has not been fully exploited. If Compound No. 2 is launched now, it is not cost-effective.

Lieutenant General Irwin thought.

He knew the thoughts of these capitalists too well. After so many years of military sales transactions, those capitalists and entrepreneurs did the same thing. They used defective products in the research process and sold them after the bidding was successful. They would launch complete products only after the value of these defective products was fully exploited. At this time, they had already developed more advanced products.

"Money is not a problem, Mr. Luther. I got a target this time. We can spend 10 billion US dollars in military expenditure every year to arm our army."

Lieutenant General Irwin said directly.

If it's just about money, America, which is rich and powerful, doesn't mind giving out a little.

In the new fiscal year, the annual military expenditure of the US military has reached 886 billion US dollars, which is very close to 900 billion US dollars.

This number is so huge that it is hard to imagine, especially when we compare it with the total annual income of the American Federation, these military expenditures account for almost 20% of the income.

Only 24 to 26 billion US dollars are used for shipbuilding each year, accounting for less than 3% of the total military budget.

Within the US military, the allocation of military budget can be said to be quite complicated.

As one of the most important branches of the military, the Navy can directly get one-third of the total military budget, which is 300 billion US dollars.

Maintenance is a big cost, but there are also things to do in maintenance, and there is also procurement, so it is unknown how much value these 300 billion can play.

Now America plans to invest 10 billion US dollars of its annual fiscal budget in cooperation with Imperial Industries. What they want is Compound No. 2.

Luther knew very well that the actual figure of the 10 billion fiscal budget should be even larger. Maybe he would report 15 billion or even 50 billion directly when reporting.

Only Compound No. 2 has an advantage against the lizards, because Compound No. 2 is faster than the lizards. Although its strength may not be as good as that of the lizards, it is faster and can completely crush them in battle.

"In addition, we also need a strong American representative like Mr. Luther. The price is not a problem. I can directly take charge of the budget within 10 billion."

Then Lieutenant General Irwin continued.

Using 10 billion US dollars to build a super soldier to become the representative and symbol of America seems crazy, but it is not crazy at all. With the dazzling superpowers and powerful strength shown by Luther, America still feels that she has made a profit.

"This is impossible. My technology is top secret. But if you want it, you don't actually need Compound No. 2. I personally recommend a strengthening technology."

Luther's expression did not change. Although it was fun to build a motherland for America, this fun could not be brought out now, otherwise it would be boring.

The Homelander incident was one of the small incidents Luther prepared to entertain himself and stimulate the Illuminati's plan to make SHIELD stronger.

"What is that?"

Lieutenant General Irwin originally wanted to say that they only wanted Compound No. 2, but the words could not be so direct, and they had to be roundabout.

So he planned to listen to Luther's enhancement project first, and then refuse it on the grounds that it did not meet their requirements.

"The corpses and living bodies of the lizard people were captured for research, and I believe you are also researching."

Luther's words made Lieutenant General Irwin feel something.

The military did get some corpses of lizard people, but they didn't catch the living ones. They got the information that Iron Man captured a living lizard man while protecting the people and solving the lizard people, and took the corpse back for research.

Almost everyone knows about the cooperation between Luther and Tony. Could it be that they have analyzed the lizard serum?

"It's not lizard serum. Reptiles have no potential. Do you know arthropods and insects, general?"

Luther snapped his fingers, and then a metal thermostat rose up from the hole in the floor.

Lieutenant General Alvin looked at this high-tech scene with great envy and felt like a bumpkin. Especially after a very clear video of a virtual projection model was unfolded in front of Luther, Lieutenant General Alvin's eyes widened even more.

"This human enhancement technology, I call it ant serum."

Luther was talking serious nonsense.

"Ant serum? What is it used for?"

Lieutenant General Alvin thought, wouldn't it turn a person into a giant ant?

Just like the lizard serum.

"Of course not. What our Emperor Industries pursues is the evolution of the human body. The lizard serum has deviated from the evil path. What it looks like after transformation. General, do you agree that it is the evolution of new humans?"

Luther shook his head and said.

"Of course not, that would make me reptilophobic."

Lieutenant General Alvin shook his head quickly. The new humans should be more beautiful, more perfect, and more in line with human fantasies and heartfelt desires.

It's like everyone likes to see handsome men and beautiful women, not lizard men.

"This kind of modification is a potential modification that goes deep into the genes and is not something that appears on the surface."

Luther said.

Chapter 174: Deal and the Iron Legion

Lieutenant General Alvin said that even if you talk like a fool, he doesn't know what you mean.

"I was very interested in the decay rate formula of lizard serum, and then I studied it and combined the characteristics of most insects and arthropods to create a super ant."

Luther knew that the other party couldn't understand, so he talked about all this.

"Super Ant?"

Lieutenant General Alvin looked confused. It would be better to say that he was even more confused.

"To put it simply, it means having the exoskeleton that most arthropods have and their own skeletal system, two sets of skeletons, plus the strength of arthropods and ants themselves..."

Of course, Luther couldn't just create an Ant-Man that easily. The force-generating structure of ants is the key, and it doesn't apply to humans. It's also impossible to make humans the same as ants through gene chimerism. With great strength, that is impossible, unless science is dead.

What he said was just to confuse the attention of America's scientific researchers with specious things, and deceive them into spending their whole lives studying how to fuse ant genes into human genes, and maybe waste tens of billions of their funds every year.

Lieutenant General Irvine saw a video of the performance of someone who was said to have been injected with the ant serum.

I saw that they were actually marching forward with AK47, and they could also lift the National Guard's exclusive armored vehicle. Such strength and defense made Lieutenant General Alvin's eyes shine on the spot.

You know, lizardmen rely on their armor-like bulletproof suits to be able to ignore the damage of automatic rifles, but these super soldiers injected with ant serum are able to ignore the damage and impact of automatic rifles. Their muscles are like armor, not even the skin is broken.

"Is this an exoskeleton?"

Lieutenant General Irvine had heard a lot about the concept of exoskeleton armor, but he couldn't see any difference between these soldiers.

It wasn't until Luther showed him the X-ray pictures of the super soldiers that he was surprised to find that the bones all over the body of these super soldiers were not the skeletons he was familiar with, but instead filled with bones without gaps.

"Human bones are generally hard, and ant serum can make their bones stronger and protect important organs, making them less likely to be injured, even their heads."

Luther said calmly.

Lieutenant General Alvin was amazed. No wonder they were not shaken by the AK47 attack. Human bones accounted for the highest proportion of the total, and now the gaps between their bones were filled.

I guess the weight of one of them is comparable to the weight of two adult men, right?

Of course, there are still gaps in the joints that can move, but because of the X-ray, it looks like one piece.

In fact, it is a set of exoskeletons under the skin, plus its own bones, forming two sets of skeletons.

Lieutenant General Alvin was shaken. He felt that the ant serum was more in line with the needs of the battlefield. Of course, the No. 2 compound was not useless. It should be a special operations super soldier suitable for tactical squads and stealth operations.

"Mr. Luther, how much do you want for this ant serum?"

Lieutenant General Alvin asked.

"One hundred million dollars for an ant serum."

Luther gave a very fair price. In this case, America would have a hundred ant soldiers born every year.

"Mr. Luther, regarding the ant serum, I will go back and report to the President. If there are no accidents, I will come with the order next time."

Lieutenant General Alvin said seriously.

"welcome."

Luther shook hands with him, and then Lieutenant General Alvin left.

"By the way, why is he leaving in such a hurry? If you continue to ask, I will recommend human enhancement technologies such as dragonfly serum, wasp serum, and beetle serum."

Luther shook his head. He didn't mind doing big business with America. Anyway, no matter how many ant soldiers there were, they wouldn't threaten the Illuminati. Only America would suffer.

"Strength will only attract stronger enemies."

Tony had been studying sleepless nights after the lizard attack, and Pepper Peppa found him.

"Tony, you can't keep not showing up!"

Pepa said to Tony.

"What happened to the company? You can decide for yourself, honey."

Tony controlled the data of the nanorobot and quickly said to Pepa.

"It's not the company's business...wait, you made so many suits?"

Peppa was surprised to find that Tony's room was filled with display cabinets, and each display cabinet contained a steel suit.

"The lizard-men incident made me feel the need to mass-produce steel suits. However, I will not sell these steel suits. They will only perform strike missions against lizard-men."

Tony nodded and said.

He felt that although the three members of the Illuminati were very powerful, they had too few manpower, and it was not easy for the Illuminati to replenish manpower. It needed Tony's strict review and the approval of Luther and others.

So he thought of reusing the Mark models that he had eliminated before. They were alternative drone steel suits, controlled by Jarvis, and the intelligence network of Angel Angel, so that they could cooperate with their Illuminati. Combat greatly strengthened Jarvis's functions.

He also roped in Banner and planned to develop a more advanced artificial intelligence called "Project Ultron".

Luther declined Tony's invitation to help him develop artificial intelligence. If he participated, it would be Skynet.

When Pepa heard that it was because of the lizard people, she didn't say much. These lizard people are really scary.

No one expected that they would rob banks and jewelry stores so unscrupulously.

There were also car robbers, and they were quickly caught based on the global positioning of the sports car.

This is not a very strange thing. The American people are generally poorly educated. Convenience store cashiers can't even add, subtract, multiply and divide, and can only rely on calculators.

Liberal education is really liberal education, and elite education is really elite education.

The upper class of America has always advocated liberal education, and their descendants have elite education to the end, making it impossible for the lower class to turn over and surpass them.

So the operation of robbing a car is not very strange.

Tony conducted research on the lizard people, trying to find a way to detect the lizard people, and then find these lizard people.

Then, he doesn't need to go out in person. According to the strength of those lizard people, Jarvis can send the Iron Legion to eliminate them.

However, Tony would never miss the chance to be in the limelight.

However, Tony's body was already in trouble.

Chapter 175 Villain Base

Vodka Country.

Siberia.

An old man lives in a dilapidated house, where many experimental instruments are placed in a messy manner. There is also a young man with dirty hair and untidy beard.

This is Anton Vanko's residence in Siberia.

Who is this Anton Vanko? He was once Howard Stark's partner, a famous physicist who defected from Vodka Country.

He and Howard invented the Ark Reactor together, but Howard found out that he sold weapons to terrorists, so he expelled him from the country. He could only return to his country in disgrace, but because of his defection, his country did not like him either.

This led to a great physics expert being exiled to Siberia.

So who is the untidy young man? He is Ivan Vanko, the son of Anton Vanko. He is a very strong white man. I don't know how he grew so big in the harsh environment and conditions of Siberia.

His messy hair is sticky, and it is obvious that he has not been washed for a long time.

He was wearing a tattered white vest, which was almost invisible. He had dense tattoos on his body, and he was not a good person at first glance.

In fact, these tattoos were all religious tattoos. Ivan Vanko was naturally not religious. He just sought spiritual comfort.

Ivan Vanko learned from his father and graduated from the National Research University of Nuclear Energy - Moscow Engineering Physics Institute.

However, with such a high degree, he was unable to get any useful job because of his identity.

And he had just been released from prison. He was sentenced to 15 years in Kopesk Prison for reselling plutonium materials to Pakistan.

Ivan Vanko was a filial child. Even though his father was an alcoholic and treated him very badly, Ivan was self-reliant most of the time and still loved his father very much.

"I am Iron Man!"

"I will tell those terrorists and Hydra in my name that your doomsday has come!"

Anton, who was dying, watched the ostentatiousness of his enemy's son Tony Stark on the simple TV. He showed off in front of everyone with great spirits, and his heart was very unbalanced.

So he told his son that everything Tony had in the news belonged to Ivan. After saying this, Anton died sadly in reluctance and regret.

Seeing his father's death and Tony's arrogance, Ivan attributed everything to Tony, thinking that all his misfortunes were caused by Tony, and he was very unbalanced because of this.

That's why he worked day and night in his and his father's messy laboratory to build the Ark reactor to kill Tony.

However, originally according to fate, this was the case, but now Tony has become too strong. If Ivan rushed up like this, he would only be knocked down by Tony with three punches and two kicks, or even knocked down with one shot.

According to Luther's speculation, the Blood Edge Armor is probably equivalent to the strength of the MK55 that Tony just eliminated. Now Tony's MK56 has solved the problem of the reduction in the number of nanorobots, just like the nanorobots in The Day the Earth Stood Still, they can complete self-proliferation and replication through nearby metal atoms!

At that time, not only will the nanorobots be replenished, but Tony can also turn into Hulk mode or even Giant mode.

This black technology has reached the extreme, and Luther doesn't know how Tony and Banner came up with it.

Anyway, with the current strength of MK56, let alone the pile of rags in the original plot of Ivan Vanko, even the Iron Legion created by Hammer Industries later will be easily turned into his own nanorobots by Tony.

So, when Ivan Vanko was grieving the departure of his father and working hard to study the drawings left by his father, a group of fully armed people broke into this icy place and forcibly took him away.

Ivan was confused, and even thought that maybe Tony Stark knew that the child of his enemy was not dead, so he sent people to deal with him?

Otherwise, there is no way to explain why such a group of fully armed guys appeared.

"Are you sent by Stark?"

Ivan asked coldly.

"No, we are Hydra, Ivan Vanko, you hate the Stark family very much, come with us, we Hydra will give you a chance to revenge!"

Hydra is used to taking the blame, Luther feels that he has helped them to become famous, and they are grateful to him.

It is estimated that it is easier for Hydra to recruit people now, just need to report a name and a lot of people will be willing to come.

I just don't know whether the guests are bad or good people. Luther thinks it should be the latter.

"Hydra?"

Although Ivan lives in Siberia and has been imprisoned, it does not mean that he is not well-informed. What's more, the earth-shaking events caused by the return of Hydra have attracted widespread attention and influence worldwide. Even the country of Vodka cannot ignore the threat of Hydra.

Ivan did not expect Hydra to come to him.

"What do you want?"

He knew that Hydra would not want to help him get revenge for no reason. They probably valued his technology.

"Ark Reactor."

What Hydra said confirmed Ivan's guess.

"What can I get?"

Ivan was tempted.

"Hydra's resources."

So Ivan followed.

He didn't see the famous Hydra leader Black Caesar, but he saw Abomination and others, so Ivan believed that they were Hydra.

These people are all superpowered, so they are naturally the signature figures of Hydra. Other Hydras don't have these signature figures. Now even if they say they are Hydra, no one will believe it.

You say you are Hydra, then what about Black Caesar? What about Red Tank? What about Colossus? What about Abomination? What?

None of them? Then you still say you are Hydra?

"I can't understand the leader's decision. Why bring back the child of an expelled guy with poor technical level?"

A guy with a head so big that it pressed his neck, looking as if he had no neck, and relying on six mechanical tentacles to move appeared, sneering at Ivan and said.

"Who is this guy?"

Ivan was very annoyed and asked.

"He is the chief researcher of our Hydra, the Big Boss, Dr. Stern."

The Big Boss was born, but because the Abomination stole the limelight, no one knew that he was taken away.

Luther... No, Black Caesar believed that Hydra must have a powerful villain scientist, so he set his sights on the Big Boss.

Chapter 176 Tit for tat

The big boss's IQ has now increased a thousand times!

Of course, Luther didn't know how to quantify something like IQ.

Big Boss is the Hulk's most powerful villain and arch-nemesis. Is the Hulk's most intelligent opponent and in many ways the opposite of the Hulk, who has seemingly unlimited power and rage and thus, to the Big Boss, seemingly unlimited knowledge and calmness.

has served as the main antagonist of the "Hulk" comic series for the past fifty years.

Unfortunately, Stern was injured after the Hulk's blood seeped into his head.

He originally thought that this terrible amount of radiation would kill him, just like the old man Stan Lee guest-starred who died after drinking a drink mixed with Banner's blood.

As a result, Stern not only suffered no damage or mutation.

Instead he discovered that his intelligence had increased a thousand times and he could save information as accurately as a computer.

He began to read voraciously, accumulating as much knowledge as he could.

Soon after, however, his body continued to mutate.

His skin permanently turned green and his skull grew larger.

Unfortunately, Luther originally planned to find Dr. Stern's brother, the crazy Philip Stern.

But in the Marvel Cinematic Universe, it seems that the big boss doesn't have such a brother.

The big boss showed his disdain for Ivan Vanko without any taboo, and even felt that the great Black Caesar was just wasting his time by doing this.

"You think you're awesome, Big Brain?"

Ivan taunted the big boss's head.

"This is a symbol of wisdom and the evolution of human beings. Orangutans like you, oh, considering your place of origin, should I call you a Siberian brown bear?"

The big boss sarcastically said indifferently.

"You, a congenitally deformed freak, where do you get the confidence to say that you are the evolution of human intelligence?"

Ivan scoffed.

"It's naturally difficult for your underdeveloped brain to understand such a concept, brown bear."

The big boss shook his head.

Seeing the tit-for-tat confrontation between the two, Luther felt that Ivan had found the right person. With such a fierce academic collision, Hydra's future must be bright!

Ivan is that catfish!

"Do you only know harsh words? Come down!"

Ivan said to the big boss angrily.

"Have you ever seen a human hunting end in person? No, we will send out hounds first, awesome dogs!"

The big boss whistled, and then two North American gray wolves came out with a low whine.

It's just that these two North American gray wolves are too large, far larger than their peers.

Of course Ivan knew and recognized the North American gray wolf.

The North American gray wolf is the largest wolf in the world, with a body length of 180 cm to 210 cm and a weight of approximately 60 kg to 80 kg.

As one of the largest canines, the North American gray wolf is very powerful in combat and ferocity, and even its individual combat effectiveness is terrifying.

But the two North American gray wolves in front of me, one black and one gray, are definitely over 2.5 meters in length, and their shoulder height is also an outrageous 1.5 meters!

This was larger than the extinct Kenai Mountain wolf, the largest of all wolves and canids.

The total length is 2.0 to 2.2 meters, the shoulder height is 0.9 to 1.1 meters, and the weight is 70 to 105 kilograms, which is 20 kilograms heavier than the North American gray wolf, the largest existing canine.

The two North American gray wolves in front of him gave Ivan a completely different feeling just by standing there.

"Go ahead, he is the bone that grinds your teeth."

The big boss said with a smirk.

These two North American gray wolves are his proud products, the Hulk Wolf!

Hulk creature produced using Hulk serum created from Hulk's blood.

The Hulk Dogs found in another version of the Incredible Hulk are of a similar type. Those Hulk Dogs can fight head-on with the Green Hulk, but the Incredible Hulk can become stronger with infinite anger. He just finished torturing those Hulk dogs.

Luther just put forward an idea and concept, and after the big boss spent some time studying it, he successfully created the Hulk Wolf.

Wolves know better how to work as a team, and their nature is ferocious enough.

Originally, the big boss thought that in order to control Hulk Wolf, he had to study something. Unexpectedly, Hulk Wolf's brain has been developed, his brain capacity has increased, and he has the ability to establish conditioned reflexes. The big boss even found that these guys are very smart and possess He has an IQ comparable to that of a Border Collie.

He then used the stimulation of electric shock and gamma ray radiation to tame the two Hulkwolves.

Although Luther felt that a wolf controlled in this way was not very safe, let alone such a smart wolf.

When Ivan saw these two wolves, he knew that they were not simple. Now they were staring at them and howling in warning as they slowly approached, and Ivan began to retreat continuously.

However, because of his experience in dealing with Siberian brown bears, Ivan did not retreat in a panic. That would only expose the weakness of his back to these beasts and let them know that he was afraid.

It just seemed like the Hulkwolf had no fear or awe at all and just ran away, which was completely inconsistent with common sense.

Just like their size, Ivan knew it must be the influence of transformation.

He quickly ran away without any intention of begging for mercy from the big boss. Ivan still had a lot of backbone.

"That's enough, Stern. If you do this, I think you should be afraid of what the great Black Caesar will think."

Bronsky leaned against the wall and said to the big boss.

He knew very well that these two Hulk wolves were basically mobile tanks. Automatic rifles could not penetrate their fur, and their bite force could easily tear apart steel alloys!

Such a terrible monster, Ivan, an ordinary person, even if he was a Maozi, could not deal with it.

"Okay, come back, I have prepared meat bones for you."

The big boss would naturally be afraid of Black Caesar. The only thing he was afraid of was the great Black Caesar. Even in his mind, he did not dare to be disrespectful to Black Caesar, because Black Caesar's telepathic ability to play with people's hearts was too unsolvable.

The big boss tried to run to the toilet in the public toilet to feast on it after he was controlled, as if it was the supreme delicacy. Afterwards, until now, the big boss felt that there was a taste in his throat.

And telepathy is not just as simple as controlling people, but also knowing what the other person is thinking. No one has any secrets in front of Black Caesar. This is also the incredible source of information for Hydra.

Faced with such an ability, isn't intelligence something that can be obtained if you want it?

How can this ability to manipulate people's minds at will and even rewrite memories and personalities not be scary?

If it was just telepathy, the big boss wouldn't be so afraid of Black Caesar. What's really scary is that Black Caesar himself has other terrible superpowers.

Chapter 177 Competitors

Black Caesar has a superpower that will never get hurt.

This superpower is called "energy absorption".

This allows Black Caesar to absorb kinetic energy, heat energy, radiation, radio waves and other energies!

By absorbing these energies, Black Caesar can maintain youth and superhuman abilities, such as unparalleled strength, speed, defense, etc.

Red Tank and other brainless people don't know the concept of this superpower, they just think Black Caesar is very powerful.

As a scientific researcher, the big boss naturally knows what this ability means.

He thinks it is impossible to kill Black Caesar, and even hurting Black Caesar is a concept.

For example, his energy absorption has an upper limit, and the energy output at one time exceeds the upper limit of his absorption, which will cause Black Caesar to self-collapse.

But the big boss doesn't dare to gamble.

Ivan saved his life, but he also hated the big boss and Hydra.

"Where are my resources?"

Ivan decided to use Hydra's resources to create an iron suit, and then let Hydra suffer the consequences!

"Come with me."

King Kong, who has retreated to the second line, said to Ivan.

Luther has an attitude of using King Kong and other second-tier superpowers temporarily and then eliminating them.

Anyway, there are so many villains in Marvel, so there is no need to worry about lacking subordinates.

Luther still wants to see subordinates with topics, rather than these random gangsters who become superpowers.

It was the third month after Tony Stark found out that he was poisoned by palladium.

[First attempt to replace palladium in reactor fuel, neutron bombardment failed, cause analysis, element reaction]

[Second attempt to replace palladium in reactor fuel, neutron bombardment failed, cause analysis.]

[Blood palladium content: 8%, still growing.]

[The attempt to replace the element was completed, and no suitable element was found. Suggestion: Continue to take chlorophyll juice.]

Jarvis completed the daily test and said to Tony.

"I suggest that this matter should be told to Ms. Pepa."

"No, the great Tony Stark will find a solution."

Tony refused.

But his current condition is not very good, and his eyes are full of bloodshot.

At first, Tony was not panicked, because his superhuman physical fitness allowed him to successfully control palladium poisoning.

But he could not resist his crazy use of the Ark reactor, which caused the concentration of palladium to soar wildly.

This was thanks to his self-regulation. If it were a normal person, the blood content of palladium would now be more than 80%, and he would be paralyzed. Not to mention becoming a vegetable, at least he would be a half-dead living dead.

He originally thought that he would find a solution with his genius brain, but three months passed in the blink of an eye.

He tried all the elements, and all failed. Either they could not react or they did not react in time.

After all, he was going to play with the theoretically falsified cold nuclear fusion. If it was thermonuclear fusion, it might have been completed.

The problem is that with thermonuclear fusion, Mr. Stark would become teppanyaki.

Mr. Stark, who did not want to become a teppanyaki pig, could only continue his research helplessly.

Fortunately, compared with the desperate situation in the original plot, Stark now has many more choices.

For example, if there is really no solution, let Luther inject himself with Compound No. 2.

The outside world is already salivating over Compound No. 2. Stark thinks it is not too much to ask for internal priority, right?

We are all companions of the Illuminati!

The effect of Compound No. 1 is so strong that he can support palladium poisoning for three months before it starts to worsen. If Stark hadn't used the Ark Reactor crazily, he could actually hold on for longer.

Maybe he could live for more than three years.

If Stark didn't continue to use the nano suit and the Ark Reactor crazily, even if he still used the Ark Reactor, he could survive for more than five years.

Of course, if he didn't use the Ark Reactor, he could actually live forever, and a battery could solve his heart problem.

Even now, even if Stark had surgery to remove the shrapnel near his heart, there would not be much risk. The problem is that Stark himself is unwilling to do that.

He feels that he needs the fragments in his body to remind him.

He needs the Ark Reactor even more, because it represents that he is Iron Man.

Luther couldn't understand his stubborn idea. Life is the most important thing.

What on earth was he thinking?

SHIELD was also very concerned about Stark's situation. From the original plot, they knew very well that Stark was poisoned by palladium, and they also found a special medicine for palladium poisoning. It can be seen that they have been preparing for this day for a long time.

God knows how they knew that Stark would become like this. Howard didn't develop the iron suit either?

However, according to Nick Fury's speculation, Stark should have been paralyzed in the hospital bed a long time ago, but he is still alive and kicking now, and he doesn't look poisoned at all.

If they didn't have a backdoor in Jarvis and knew Stark's true situation, they would have thought that Stark was not poisoned.

Now that this happened, Nick Fury knew that Stark was probably preparing to find a solution or something.

How can this work? In the original plot, Nick Fury is proficient in the art of fishing, and slowly draws Stark to his side, which is repaying kindness. Guys like Stark who are hard-mouthed and soft-hearted are most susceptible to this trick. .

But there is a prerequisite for repaying kindness, and that is to show kindness. If there is no kindness to give, it would be strange for Stark to take advantage of them.

And Luther definitely has a way to solve a small palladium poisoning. Logically speaking, Stark cannot ignore SHIELD's kindness. Wouldn't it be better for me to go to Luther directly?

But the favor in Nick Fury's hands came from Howard.

Just because of the name Howard, Nick Fury took advantage of Stark.

Luther, who could see clearly, would not wade into this muddy water.

He is busy with another thing now.

Lieutenant General Alvin, who returned last time with the information on the ant serum, said that the situation was not very good. There was a competitor in Imperial Industry!

According to Lieutenant General Alvin, the opponent is very strong, so Luther should be mentally prepared.

Of course Luther doesn't care whether the business can be done or not. He is in a situation where if it is done well, it will be better if it is not done and sold to those terrorist organizations. What he is curious about is what kind of monsters the competitors are.

You know, this is ant serum. In the field of biochemical technology, Luther thought that there should be nothing comparable, unless it is bat serum?

Chapter 178: Let's go tonight!

This competitor is very strong.

He cured the vice president's daughter's broken limb with one move.

The vice president has a little daughter who had one leg amputated because of a car accident. You know, she was less than ten years old.

Before that, the vice president had been looking for a way. The emergence of Luther and Imperial Industries gave him hope, but he couldn't wait for Luther.

Although Luther also had a plan to develop this vice president into his own person, that was made before he left. Now, Luther is too lazy to develop such a thing.

Unless it is a situation like Norman who came to the door himself, why should Luther take the initiative himself? He gave the other party face?

A mere vice president is just a spokesperson for some people. Luther doesn't even take those people seriously. A word can make them die in the terrorist attack of Hydra. Why should he care about a rootless duckweed?

Biochemical technology is the monopoly technology of Imperial Industries, just like Stark Industries' current new energy projects and the Iron Man suit technology that Tony has no intention of selling.

Why do the two of them have such great power when they join forces?

On the one hand, they have the three strongest forces. In this country where fists are the right to speak, when others suspect that you have a deadly weapon, you'd better have one.

On the other hand, it's influence. These monopolized technologies are influence, unique influence.

Monopolizing a unique core technology can gain influence in the world and the possibility of changing the world.

If another competitor appears in this monopoly, the benefits and profit margins of Imperial Industries will be greatly compressed.

Originally, America had no choice. In order to deal with the attacks of super criminals like Lizardmen, they could only grit their teeth and cooperate with Imperial Industries, but now someone has broken this monopoly.

Now America and the military's goal is to use this as a bargaining chip to play tactics with Imperial Industries. Even if the biochemical technology of this competitor may not have such a big advantage, America and the military are both wealthy and powerful.

They can completely grit their teeth, hurt others with their own, and spend a higher price to buy worse things to ignore Imperial Industries.

The purpose of doing this is to force Imperial Industries to come up with cheaper but more advanced products.

If it weren't for Luther, this kind of thing would only be considered reasonable.

They feel that they have taken control of the Imperial Industries. We didn't have a choice before, but now we do. If you still want a \$10 billion military order every year, then come up with something better!

Of course, there are also people who are at odds with the parties that Luther supports, and they use this as an excuse to oppose the Imperial Industries. They oppose just for the sake of opposing, so that they can stand out in the next election.

At the same time, it is also to make it difficult for the Elephant Party/Donkey Party!

But if it was Luther, America did this, and Luther immediately asked his secretary to announce it.

"Imperial Industries will go to Europe to develop new markets and cooperate on projects. According to Emperor Luther himself, the project of this cooperation is called cross-species genetic factor human body transformation serum technology, which has the hope of mass-producing super soldiers that surpass Captain America!"

"Representative of the Imperial Industries News Department..."

"Imperial Industries: The North American market is already saturated. We will consider establishing a new head office in Europe and a subsidiary in Asia, while completely withdrawing from the North American market..."

"Imperial Industries: The rent is due, and we can't afford it. We have no choice but to leave. A big country in Europe promised to enclose land for us as an industrial zone, with a 100-year rent-free period!"

This news shocked the entire United States. For a while, the whole of America was discussing this matter fiercely.

Especially when Luther joked about not being able to pay the rent, it made Americans feel very divided.

Monopolistic biochemical technology industry, will Imperial Industries be unable to pay the rent?

"Madman!"

"Luther is simply a madman. How dare he do this? He is provoking America. Send someone to arrest him. Don't let him get away!"

"Okay, then how many fleets should we send to catch him? What about military expenses and war losses?"

Another congressman sneered and mocked.

The other party was speechless. The force shown by Luther was the key to America's inability to do whatever she wanted.

Otherwise, America would definitely not tolerate him jumping like this, even if he involved many jobs, but America is not without a way to deal with it.

"Gentlemen, the problem now is that Luther does not seem to be joking, and a certain European country has already had a result, which we are very reluctant to see."

The importance of Imperial Industry is unquestionable. Even if they find a competitor that can replace it, the biochemical technology provided by the competitor is not as powerful as Imperial Industry.

What's more, they were still counting on what good things from Imperial Industry. Compound No. 1, which could delay aging and enhance combat effectiveness in certain aspects, was highly praised by those bigwigs, so they were greedy and wanted Compound No. 2.

It could even be said that they couldn't wait, especially those rich people who were on the verge of death, who were eager to get Compound No. 2 to prolong their lives.

But Luther was reluctant to launch the sale of Compound No. 2, so they could only use their own means to put pressure on Imperial Industry.

It's just that they didn't expect Luther to be so strong, or so young and energetic, that he would burst under pressure.

In this regard, they can only be classified as young people who do not know the heights of the world and the rules of the capitalist game, and are nouveau riche who have no foundation.

Tony heard about this and came to see Luther.

"Are you really going to Europe?"

Tony asked.

Even though Luther seemed to be far away and seemed like a loser, in fact countless people wanted him to stay here, but they couldn't stop Luther from leaving.

"Emperor Industries will be renamed Emperor International. Then you won't need to worry about these things. Moreover, I just left America, not the Illuminati."

Luther said to Tony.

"Well, it seems you have made your decision."

Tony paused and did not let Luther stay. He would help Luther handle these things.

"Is it true that you are launching a human-modifying serum project with that big country?"

Tony was more concerned about this technology that sounded like a lizard serum.

"Of course it's true. After all, I have a lot of people to support."

Luther nodded.

Leaving America this time, a few people did not choose to leave, but many people chose to follow Imperial Industries.

Chapter 179 I don't want to play with you anymore

They think that Imperial Industries will have a promising future wherever it goes, and it has a promising future!

As Imperial Industries is leaving America, it may not be so convenient for America to get Compound No. 1 in the future.

After all, they did not need to queue up before, and other countries were digested by America before they had time to queue up.

Now they heard that Imperial Industries was going to move to Vodka Country, and it was because of the ridiculous issue of rent.

The people did not protest, because Imperial Industries' products were too high-end, and even Superman drugs were very expensive for them.

So they naturally would not speak out for Imperial Industries.

But the World Health Organization, as well as charitable organizations, AIDS charity groups and the like are all speaking out.

And those middle-class people who are waiting for Compound No. 1 that Imperial Industries has finally queued up are also speaking out.

They are very smart and will not speak out easily, but now their core interests are damaged.

After injecting Compound No. 1, they are new humans, completely different from the old humans. America even has new human restaurants and new human member clubs.

These are provided to those bigwigs who have the ability to inject Compound No. 1.

It can be said that it has completely become a symbol of new status and identity, and even a brand new class.

For these middle-level elites who want to continue to climb up, the best opportunity is to contact these bigwigs.

As a result, they saw that the opportunity to become new humans was gone, and they didn't know when they would have their share in the future, even if they all took out loans, but the current situation is equivalent to Emperor Industries declaring bankruptcy.

The newly established is no longer Emperor Industries but Emperor International. They don't even recognize the orders of the American military. Emperor Industries has gone bankrupt. We are Emperor International. If you want to be responsible, go to Emperor Industries.

What can America do?

The cause and result of this incident are the product of the compromise of Congress, but you want to let those big men be responsible for it?

They will definitely not do it, and they will definitely find a way to shirk responsibility.

And if you find someone to take the blame, if the weight is not enough, then Luther will probably think that they are provoking, instead of intending to talk to him properly.

If the weight is enough, who should you find?

No one wanted to, so they could only watch Luther's Imperial Industries... now Imperial International, really move away.

Stark Industries acquired Luther's Imperial Building, and Luther took away the cucumber and the basement.

When the cucumber saw the light of day again, it was still very strange.

But his personality was more dull than the real Broly, so even if he felt strange, he didn't say much.

A certain big country in Europe was very welcoming to the arrival of Imperial International. The land tax-free use right for 100 years expired after 100 years, and it only needed to pay 1,000 rubles to renew it for another 100 years.

After all, the land is vast and sparsely populated, and there is plenty of land.

As for the branch company sent by Imperial International to Asia, it chose a place with a large population and abundant resources.

That's right, it's the magical elephant country, the country of Indian brothers!

Given the magical crime rate in this place, Hydra will not lack materials and criminals for human experiments in the future.

They have to be given a facelift, lest most of Hydra's subordinates turn into Indians just after Emperor International moves out. Wouldn't that tell people that Emperor International is related to Hydra?

Why don't you go to the places of Xiao Baga and Xiao Xiba?

There are many people and little land in those places, and the material resources are scarce and the conditions are poor. There is no point in going there, unless you go there for the purpose of profit, but it is easy to cause an economic bubble.

Luther must be sick to go to such a place.

The territory of Brother India is different. First of all, there are many people, and secondly, there are more people who are not considered human beings and criminals.

More importantly, the resources in this place are still good. Emperor International can slowly take control of the country by controlling these material resources.

At that time, turn the whole of India into its own territory, and develop a cosmic army!

Luther will not stay on Earth forever. He plans to immigrate to Mars and Venus, and then transform the environment to transform Mars or Venus into a second Earth. At that time, he is not an emperor, but better than an emperor.

Not an emperor, but an emperor!

Who would be willing to compete with billions of monkeys for such a small resource on such a small broken ball as Earth?

Mars is very good, but if Luther has a choice, it is better to go to Venus.

This is because Mars is too close, too close in all senses. Although Venus is also close, it is closer to the sun than the Earth, so it is not the first choice for humans. The first choice for humans to immigrate to is Mars, after all, it is the second terrestrial planet.

Venus is not within the scope of human consideration, because the atmosphere system environment of Venus is very complex, and there are too many chaotic airflows, which seriously affect the landing of spacecraft.

In addition, the surface temperature of Venus is as high as 450 degrees Celsius, which is the temperature at which proteins are completely deteriorated, and water is directly sublimated.

The worst thing is that there is a lot of carbonic acid in the atmosphere close to the surface!

Of course, in addition to these disadvantages, Venus still has advantages.

First of all, its name is very nice, so Luther plans to make the atmosphere golden.

Secondly, Venus has a large amount of mineral resources, which means that he does not need to bother looking for resources. Luther can also turn resources into other resources.

For example, turning soil into cola and fried chicken is a basic operation for Luther.

It is even more delicious and hygienic than real cola and fried chicken, and it has achieved "real eating soil".

And even if he does not do this, Luther can also use the mineral resources and gold of Venus to exchange resources with the earth.

But trading with a planet, especially such a huge mineral resource of Venus, will easily overwhelm the mineral industry of the earth.

Even other resource industries may be greatly affected and may even break.

Now human society can be said to be a closely connected industrial chain that affects the whole body.

The last point is that for Luther, it does not cost much to do such a thing, so there is really no reason not to do it.

Moreover, at that time, he can also watch the various funs of the earthlings who envy and hate.

They are still fighting on the earth, but Luther has become the supreme ruler of a planet, an absolute emperor!

Emperor International started to re-establish its old business, and in addition, they also sold a new serum.

Ant serum!

America naturally knew what ant serum was.

Chapter 180: Doing the opposite

Regarding the competitors, Luther already knew that the stewards he supported were not useless, but they did not expect that their master would be so "uncompromising" and choose to leave directly.

Then at this time, America discovered that they didn't seem to have the means to control Luther and Emperor International.

Emperor International has both force and technology, so in this case, America originally thought she had a chance to win, but something went wrong when she was sure of it.

They actually didn't think about the possibility of this happening beforehand!

After all, no one expected that Emperor Industry would do this. They thought that Emperor Industry would be forced to compromise like countless companies before it and hand over better products to compete with competitors, and then they would be able to enjoy the benefits.

Who knew that Emperor Industries would just run away?

And they ran away. Although they regretted it, it was not impossible to continue.

The worst thing you can do is travel further away, and then you have to spend money and queue up to buy Compound No. 1.

Anyway, what they lack most is money. Time may be a little more precious, but compared to face, it is not worth a billion or a million dollars.

Originally, they were all planning to stop talking.

However, after Luther left America, he publicly stated that he had been treated unfairly in America. He stated that in the future, people with American nationality or people with multiple nationalities of American nationality would be included in the list. Entered Emperor International's blacklist.

Do not accept their orders and transactions.

And in order to prevent other people from helping to purchase on behalf of others, Emperor International will implement a limit transaction for each person in the future. That is, if you want to buy serum, compound No. 1 and superman medicine, everyone can only buy one copy. Large enterprises must also follow this standard. .

Then Emperor International will strictly control these products. Once an order fails to match, it will be put on the permanent blacklist.

Finally, there is the cool operation of Emperor International. They have launched a new No. 2 compound, which means that the No. 2 compound can delay aging, maintain youth, and can effectively increase the number of human cell divisions. In other words, it can increase life span! ! !

Immortality, or living longer, has always been a dream of mankind.

Now, compound number two achieves this.

"Compound No. 1 can allow you to live healthily to the age of eighty. In some cases, you can maintain your body functions and live to the age of a hundred. You will not suffer from Alzheimer's disease, weak limbs and other problems at the age of eighty."

"Compound No. 2 is an enhanced version of Compound No. 1. After 10,000 clinical trials and a large amount of data testing, Compound No. 2 was officially put on sale. Each injection of Compound No. 2 costs US\$100 million. All injections of Compound No. 2 People who use the compound can maintain healthy body functions and live to be over a hundred years old!"

"Breakthrough in human lifespan!"

After seeing a series of big moves by Emperor International, America suddenly exploded.

"provocative!"

"He is provoking us!"

"We want to strongly protest and condemn the Vodka Nation, condemning them for using illegal means to threaten Emperor International and publishing some words that are not conducive to the image of our United States. It is time for the Pacific Fleet to move and arrange military exercises!"

"The Vodka Country is very tough this time. They have reached a cooperation with Emperor International. The first batch of super soldier legions made from ant serum are expected to be released soon. They are originally our America's!"

"Does the vodka country have the ability to consume? How much oil and natural gas do they have to sell to afford ant serum?"

"Haha, the Vodka Country doesn't have that kind of funds, but they have resources and projects. Except for banks and national sovereignty, which cannot be provided, everything else is easy to negotiate."

Emperor International does not necessarily need money. What is not valuable and what cannot make money in a country?

Roads and railways, bridges and ports, every city's public facilities, every valuable industry, these are all money and industries in vain.

The Vodka Country actually hopes that Emperor International will do this. Of course, after all, they are not a capitalist country in nature, so these things cannot be completely given to Emperor International. At most, they will be contracted and jointly developed.

In fact, Vodka Country only symbolically collects 1% of profits as taxes and cooperative development funds.

Of course, they also have the idea of letting Emperor International help with development and construction. When the construction is completed, wouldn't it be nice to take it back?

Can Emperor International still be able to resist the power of a country?

It certainly looks like this. Emperor International did not receive a penny, but paid a hundred ant serum.

In fact, if these industries are developed, more money can be made.

These are the reactions of Congress and the big guys behind it.

Other high- and middle-level elites heard that compound No. 2 can ensure that the injected person can live to be over a hundred years old, and live a healthy and healthy life over a hundred years, without having to worry about Alzheimer's disease and various physical problems. Such a problem.

It's just that the price is too expensive, costing 100 million US dollars.

Even elite talents like them cannot afford that much money.

Moreover, there are prerequisites for non-American citizenship to be purchased. Although they can jump repeatedly, first withdraw from American citizenship, and then join American citizenship, but what if Emperor International launches Compound No. 3 in the future?

Many elites have begun to think about immigration.

Europe is not bad, with various welfare benefits that are as high as a percentage of the country's annual income.

Emperor International is now building a head office in Europe, which is likely to bring a wave of European economy. As elites, they naturally have such a far-sighted vision.

Otherwise, how did they climb to their current position?

In addition to their own elite talents, it is more because of their sharp vision and keen sense of smell.

Emperor International may cause the problem of talent loss in America. Not many people know it at present, and it is impossible to foresee it.

They may have the brain, but they instinctively resist the possibility of a company's influence being so exaggerated.

High-tech itself plus breakthroughs in human life span, these two necessary conditions, prerequisites are met, and the development of the economic region is definitely inevitable.

It is not difficult for Emperor International to drive the economic recovery of Europe.

"I didn't expect it to be the Extremis virus."

Luther looked at the information.

The so-called competitor is the super villain Aldridge Killian of the Extremis virus.
