

## ***Kryptonian 19***

### *Chapter 19 Imperial Philanthropy*

"Successful... maybe it's because the Marvel world has a higher acceptance limit?"

Luther successfully recreated the omnipotent capsule in the Marvel world. It felt very smooth and incredible.

So Luther immediately guessed that it was likely that Marvel had too many black technologies, and the Marvel universe's ability to accept more was also increasing. The black technology of the universal capsule is actually nothing, and the Pym particles are even more exaggerated.

"This is actually a good thing for me. In this case, if I can go back to the Earth of Dragon Ball, I can directly obtain artificial human technology."

Luther was a little excited. There is no need to think about the gold content of artificial human technology. An infinite energy furnace alone is a gadget with the highest level of black technology. Moreover, the output of this gadget is very high. According to the standard, even Super Saiyan 1 cannot beat it. , I'm afraid it's not the kind that can destroy the solar system with its energy output in an instant.

Although he might not have researched such a powerful thing when he went to see Dr. Gro now, the ideas could be used as a reference.

But he still has a lot to do.

The next step is to study super divine water and fairy beans.

Sun Wukong and the others have never thought about solving the problem of cultivating fairy beans, nor have they thought about extracting the ingredients of fairy beans for synthesis, testing, purification, etc., which makes Luther feel that they are completely wasting natural resources.

Think about it carefully, if this thing can really be purified or synthesized, how powerful would it be?

You must know that the back of the fairy beans is very useful to the strong ones at the cosmic level.

The same is true for the research on super divine water. Luther is not sure whether its purification and synthesis can help him develop his potential for the second time, but it is always right to try.

"BOSS."

Michelle pushed open the door of the laboratory. After some chemical disinfection, she saw Luther. He seemed to be studying something intently.

Compound No. 1 alone is enough for them to make a lot of money, and it is a steady stream. After all, human beings have always been pursuing to surpass their own kind and become supermen.

It is said that there is still a hot topic of discussion, that is, whether people who have been injected with Compound No. 1 can participate in various sports competitions.

Most sane people feel that it cannot be done because it is unfair. That is twice the physical function. The better the physical fitness is, the stronger it will be after the injection. The gap is too big.

It is estimated that after you inject any heavyweight boxing champion, you can easily defeat Ali and Tyson in their prime.

There are also irrational people who think that since there is a competition to determine the best, then of course these people should be allowed to participate, because they are human beings too!

There are also those who are obviously sensible but pretend to be irrational, intending to provoke conflicts and gain benefits.

For example, can a person injected with Compound No. 1 still be considered a human being?

Luther has actually calculated this kind of thing through his super brain. With the emergence of strong men, weak humans will be eliminated and extinct. At this time, they will not be willing to accept it, but will fall into a self-designed competition.

At that time, various social problems will arise, such as the way out and future for ordinary people who cannot compete. After all, ordinary people will definitely still make up the majority, and the social structure is expected to undergo huge changes as a result.

To put it simply, even when there is no actual physical difference, there is still a racial surname system, a blood aristocracy system, a superior and inferior system, let alone a situation where there is such an obvious physical difference.

These topics have even led to many people protesting and demonstrating, sit-in at the gate of Emperor Company, demanding that Emperor Company provide Compound No. 1 to everyone for free. They believe that Emperor Company has an obligation to help all mankind become new humans!

Luther's solution to this problem is simple, that is, to launch a "new human gene editing loan"!

Since there are car loans and housing loans, why can't there be an "enhanced loan"?

It is true that compound No. 1 can only be obtained by those with money and power. Judging from the market prospects, there is still a lot of room for it. When it is almost saturated, it will be time to take advantage of the poor.

By then, mass production + price reduction will be inevitable. After all, the powerful people are saturated. They have all been injected with the No. 1 compound per capita. Will there be a second injection? There is no additive effect!

And Luther believes that it is possible to simultaneously monetize the rich and the poor, just like the famous Apple mobile phone. In the 4th generation, some people cut their kidneys and sold them to buy it, but what is the value of the 4th generation Apple now?

In addition, isn't America a place where the awareness of early consumption is prevalent? Luther feels that doing so has actually helped a lot of people!

This is charity. Luther is kind-hearted and enthusiastic about charity. If you pay in installments and apply for a body enhancement loan from the bank of the Imperial Company, you can get a 20% discount.

"The merits are immeasurable. After all, when the Chitauri invade in the future, they may face enhanced humans."

Luther felt that he was at a disadvantage because he was in the Marvel Universe where there was no such thing as merit. If he had saved so many people in a city in Prehistoric and Journey to the West, wouldn't he have been given the golden light of merit?
