

## ***Kryptonian 54***

### *Chapter 54 Original Super Gene and Super Gene Engine*

Don't think it's an exaggeration. The original plot repeatedly showed the detection and analysis of various atomic movements by beings at the level of gods.

At the very least, Super Seminary knows how to go into the microscopic realm in this regard.

The treasure house of knowledge was said to be a celestial computer second only to the Great Clock, placed in the dark plane.

The treasure house of sacred knowledge records all the cutting-edge science and technology of the angel civilization, as well as relevant data of major civilizations in the known universe, and can accurately calculate and deduce the development process of galaxy civilization.

According to the settings, the Treasure House of Sacred Knowledge and the Great Clock have the function of a cosmic tree model.

Through this function, the entire universe is simulated.

According to the Big Bang theory of the universe, various mechanical systems from the main material plane to the dark matter plane are calculated to form the entire morphological framework of the universe.

It starts from an explosion core and spreads out to form a tree-like particle structure diagram.

The diameter is huge, forming a spherical celestial body suspended in the universe.

There are countless luminous particles around it, each particle is a galaxy, and each galaxy particle can be re-expanded to show the state of the entire galaxy.

The entire galaxy can be further expanded to include their planets, their geology and landforms, temperatures, etc.

The data it calculates are relatively accurate unless a civilization changes those planets or even stars.

All data is real, and accuracy varies based on the varying degrees of destruction of the universe by local civilizations.

Dinghei called the cosmic space that a large clock can accurately analyze the "known universe."

Spaces that cannot be accurately analyzed are called "marginal spaces".

By the way, the scum king Hua Ye and millions of scum were banished by the angels and driven to the edge space.

The characteristic of edge space is that calculations and analysis are inaccurate. Coordinates and space jumps transmitted through wormholes will mysteriously fail, or they will arrive at other locations.

Even the smallest changes can be updated and predicted in real time. Even if the cosmic tree model is running, it consumes a lot of energy and resources.

That's why He Xi was surprised that the man-in-law missed such a large piece of hidden money.

"Where did you get this dark silver?"

Hexi asked.

"Why are you asking this question? It shouldn't have anything to do with the deal between us, right?"

Luther knew why He Xi asked, but he still pretended not to know.

Anyway, no matter how outrageous He Xi's imagination is, it is impossible to imagine that he is from another universe. At most, he thinks that he obtained the dark silver in the edge space outside the known universe.

Because it is a place that even the "big clock" of celestial-level supercomputers cannot calculate.

"What do you want? This thing is indeed what our angels want."

He Xi nodded and did not continue to ask. She figured out that the Kryptonian civilization mentioned by Luther might be a civilization that existed in the fringe space, so this piece of dark silver probably came from the fringe space.

"I want you..."

Luther looked at He Xi and said.

Hexi's expression changed slightly. Everyone in the known universe knows about the matching of angel civilizations. However, angels will always look for super warriors and male gods, and they rely on the calculation results of Holy Kesha's sacred knowledge treasure house.

For He Xi, she felt that this method was too boring, so she didn't consider it at all.

But her current identity is not Tianji King Hexi, but "Angel Urling".

This leads to the fact that if Luther wants her... although it is impossible to succeed, the man-in-law will definitely laugh at her after she finds out.

"I want the super genetic technology and divine body technology of your angelic civilization."

Luther took a big breath and then continued.

"That's impossible."

He Xi shook his head and said.

Luther was panting heavily, and He Xi just paused, not affected at all. After all, she was an old woman tens of thousands of years old.

She cannot be expected to be easily startled like a little girl.

"The super gene technology and divine body technology of each civilization are unique. It is impossible for you to want the super gene of our angels."

He Xi said.

"You misunderstood. What I want is not the angel's super gene, but only super gene technology and divine body technology."

Luther shook his head and said.

Super genes are divided into original super genes and super computers based on super genes implanted in human genes - dark matter computers.

Although it is not shown in the plot, if the original super gene fights against the super soldier with the super gene engine, it will feel like the opponent is hanging on the wall.

The reason is that the dark matter computer implanted in the gene can help the super gene carrier better control its own super genes and strengthen the ability of the super genes, just like an auxiliary software plug-in!

For example, if you want to release flames, you have to control it yourself. The other party can release flames at will, and they are still huge flames!

The casting speed and fire power will completely overwhelm you, and everyone has the same super gene. Will you feel that the other party is hanging on the wall?

Gene expansibility, matching degree = suitable for installing computers.

Activate the super gene, which is the invisible gene before it is activated = plug the computer into the power source and turn it on.

Different super genes = computers with different configurations.

Fusion gene = replacement of computer accessories.

Space-time technology = large-scale system software, which requires a long time to develop, install and be compatible, and learn assembly language.

Space-time gene Void gene = pre-installed software system with functions, can be applied more deeply and better (still need to learn).

Void engine Black hole engine = pre-written large functional system, same as above.

Demon civilization's powerful, flame, rubber body genes = low-end computer + small software.

Hearing Luther say this, He Xi looked him up and down.

"You are the original super gene?"

He Xi was more interested. Can the original super gene reach this level?

Judging from the killing of Sumali, the second-generation scum, Luther's Krypton civilization is undoubtedly more powerful in terms of original super genes.

Such a civilization, if it obtains super gene engine technology, it is estimated that it will be a big wave of enhancement.

Even if Luther said that his civilization has been destroyed, He Xi would not believe it immediately, even if she is a face control, even if Luther looks completely in her strike zone!

She is not Angel Zhixin and Angel Yan, so prodigal, the source code of the sacred knowledge treasure house is given as long as she says, and Tianren No. 7 is given as long as she says.

"I can't make the decision on this matter."

He Xi shook his head and said.

At the same time, he is very interested in Luther's original super gene. If he can get it, maybe he can use it to strengthen the angel's super gene!

"Really? Then I will trade with Lieyang Civilization."

Luther nodded.
