

Kryptonian 57

Chapter 57 Biomass Computer

"The super gene engine technology is indeed useful to me."

After Luther finished studying, he began to think. His thinking speed was also very fast. Although it was not as exaggerated as the Planck time unit, it was almost as much as the main god of civilization supported by a celestial-level supercomputer. Luther still had confidence.

The reason why the Doomsday Kryptonian gene and Broly gene could not be fused was because both genes were too strong.

If you want them not to be mutually exclusive, fight and waste, you can only cultivate them from embryos, which is the method of Dr. Gro's Sarru artificial human.

But that would make no sense.

Invincible beings can be cultivated, and Luther doesn't care about this, otherwise he wouldn't have cultivated cucumbers. However, this foundation is based on the fact that he is invincible first.

I will train an invincible thug only when I am invincible myself. If I am not invincible yet, I will train an invincible thug first... I won't go into details. For the specific outcome, please refer to a series of two-dimensional works in the world such as Dr. Gro. The villain.

"The super gene engine, that is, the dark matter computer can design programs and functions. This is also the reason why the dark matter computers of each different super gene do not match. My dark matter computer cannot be made with materials from the super seminary, otherwise it will not be possible at all. Can't handle the Doomsday gene and Broly gene."

Luther began to study.

The strength of his Doomsday Kryptonian gene and Broly gene are too high. If he uses the dark matter computer materials from the Super Seminary, I am afraid that if these dark matter computers are not upgraded at once, they will be overloaded and scrapped, and then he will lose control. I never know what it will become.

It doesn't matter, the intensity is too low? Can't the material hold up?

Luther was originally very insecure about installing tiny mechanical creations in his body. He personally did not believe in the combination of machinery and flesh and blood. Who wouldn't be afraid of cyberpsychosis?

So he felt that he still had to take the biological route!

"Interesting, the Doomsday gene cells are used to create a dark matter computer or biomass computer for control. The Broly gene is directly implanted into my genes. The Doomsday biomass computer has only one functional program, which is suppression and control. Adapt to the conflict of two super genes!"

Luther quickly found an idea. Broly's genetic cell biomass computer is not very reliable, and its adaptability is not as professional as Doomsday. Although it can continue to get stronger, in terms of adapting to evolution, Doomsday said it is second to none. , no one dares to say first.

Even Darkseid's Omega Effect can adapt to it after dying once.

The biomass computer and the dark matter computer are not the same concept. Although the functions are similar, this thing is an unprecedented initiative pioneered by Luther. If it succeeds, he alone can use it.

In the context of the super seminary universe, the dark matter computer is more suitable.

Luther took this path because his two super genes, Doomsday and Broly, could destroy heaven and earth. They could kill gods at the top and destroy the universe at the bottom. No matter what, he would never let go of fusing the two super genes together. possibility.

"My current Doomsday gene strength is still too low, I need a stronger Doomsday!"

Luther's current Doomsday gene can only be said to be castration, copycat, and fake. The real Doomsday from beginning to end is the ancient Doomsday that killed Apokolips and even Darkseid's body was killed.

The Doomsday that the out-of-control Kryptonians turned into was, at best, a shoddy imitation biological weapon.

It's not that Luther couldn't create better Doomsday genes before, but he was afraid that he wouldn't be able to bear it.

...

"Luther, you seem to be very busy recently?"

Qilin keenly noticed that Luther seemed to have little free time recently.

"Well, something happened in the store."

Luther would naturally still find Qilin in his busy schedule. His biomass computer had failed thousands of times.

A more powerful Doomsday gene was successfully cultivated, but it was stuck at the biomass computer step.

This is how scientific research works, with countless repeated experiments and waste of countless resources just for a little possibility.

It's not too busy to say that he is taking a break from work. Luther is bored and can handle a lot of work by himself. It just takes a long time to wait.

"What happened? Do you want my help?"

Qilin immediately said with concern. She knew that Luther had five chain beverage stores, but Qilin didn't care much about this kind of thing. She was not with Luther for money. In this day and age, rich people It cannot be compared to having power, having power cannot compare to having power, and being powerful cannot compare to having background.

And Qilin happens to be powerful.

"It's nothing, I'm just planning to open a new branch, and we're currently selecting a location."

Of course, Luther could not say something about the urgent need for cash flow, and then defraud money and sex.

"Is business so good?"

Qilin was a little surprised. To open a branch, the income must be greater than the expenditure to expand the business.

"It won't be about taking out a loan to open a new store, Luther. Don't be anxious. It's best to be down-to-earth. I don't mind how much money you can make."

Qilin was worried that Luther wanted to marry her gloriously in front of her father-in-law, so she took out a loan to open a branch.

This is not surprising, or maybe most people do this, or they think that taking risks may not necessarily be risky, but they don't know that a careless person can end up losing his family.

Qilin didn't want Luther to take this risk.

"That's not true. The business is very good. There is a big difference between the expenditure and the income. I have saved a lot of money and there is still some leftover when I open a branch. It is better than earning interest in the bank. I don't dare to take risks in investing. So opening a store is the best choice."

Luther looked honest and honest. Investment, any investment, that was so risky.

Qilin felt very satisfied after hearing this.

"Where is the location? Is it still in Juxia City?"

Qilin asked with concern.

"No, I plan to throw it to the capital, Northern Star."

Luther just said it casually, but it would be no problem to make arrangements after he goes back.

After all, his drink had a little something added in it to make it taste great, so there was basically no need to worry.

This is also to prevent my father-in-law from discovering that his store is losing money during the investigation. Where did he get the money to fall in love and marry my daughter? I am afraid it is not money laundering!

If that happened, everyone would always be embarrassed, so in order to avoid this situation, Luther had to turn these five stores into money printing machines. The daily income started at 8,000 and ended at 10,000, barely enough to maintain the store rent.

"Every inch of land in Northern Star is more valuable than Juxia City. Isn't that bad?"

Qilin said worriedly.
