

Kryptonian 671

Chapter 671 My power is stronger than yours!

Don't you know the existence of the Galaxy Supervisor?

Of course, it's because your vision is too low and you can't see the existence above your head.

Once a person has determined something, even if there are some suspicious points that contradict his cognition in some small aspects, he will follow his own logic and associate countless reasons.

Then he will choose the most reasonable one or more reasons to make sure that this matter is in line with his cognition and logic. We usually call this behavior brain supplement.

"It doesn't matter whether you believe me or not. What matters is that your behavior has violated the Galaxy Justice Law. If you continue to be stubborn, then I can only take necessary measures."

General Zod sneered after hearing Luther's arrogant words.

"Then try to stop me!"

He took a step, and the whole person burst out with terrifying speed in an instant, rushing towards Luther. His fist carried a strong energy fluctuation, as if to destroy everything.

However, when his fist was about to touch Luther, he suddenly felt a terrifying pressure acting on him.

This pressure was like a mountain pressing down on his head, making General Zod unable to resist. Even though he was wearing a powerful armor made of Kryptonian technology, he was still crumbling under this pressure.

The distance between his fist and Luther was so far away that it was out of reach!

"Kneel down."

Luther said calmly. Although his voice was not loud, it exploded in General Zod's heart like thunder.

The next moment, General Zod was crushed to the ground by the gravity that was like a mountain. He struggled to stand up, but found that he could not move at all.

"General!"

The other ten Kryptonian soldiers were very anxious when they saw this, and they all charged forward to help. However, they were also attacked by the mysterious force. They fell to the ground and could not move as if they were tied by an invisible rope.

At this moment, they finally understood why Fiora and the other two had been lying on the ground and could not get up - it turned out that all this was Luther's fault!

"You..."

General Zod truly believed in Luther's identity and strength at this time. He wanted to say something but couldn't find the right words. He looked at Luther with a gloomy face, his heart full of unwillingness and anger.

Luther ignored his emotions, he looked at General Zod and the soldiers calmly.

He knew that although they were suppressed by his power, they would not succumb. They were Kryptonians, creatures with great power and wisdom.

"Your actions have violated the Galactic Justice Law."

Luther's voice echoed in the empty cabin, and every word seemed so resounding. His words, like a heavy hammer, hit General Zod's heart hard.

General Zod, the general who once ruled Krypton with an iron fist, seemed a little flustered at this moment. He looked at Luther, and a trace of unwillingness and anger flashed in his eyes.

His soldiers, those warriors who were once loyal to him, also fell silent at this moment. They knew that facing such a powerful and determined opponent, they seemed to have no chance of winning.

"If you are willing to give up your plan to conquer the earth, I can consider giving you a chance to reform."

Luther continued, his voice calm and firm, as if everything was under his control.

When General Zod heard this, an indescribable anger surged in his heart. As the guardian of Krypton, how could he give up so easily?

However, he also knew that if they continued to be stubborn, what awaited them would be a devastating blow. He took a deep breath and tried to calm his anger and unwillingness.

"Why!"

General Zod couldn't help but roar.

Luther smiled slightly, as if he had expected General Zod's reaction. He said lightly: "Because my power is stronger than yours, don't you think that the law of the jungle is the truth? Why are there so many whys?"

General Zod was choked by Luther's words and couldn't speak.

He did believe in the truth of the law of the jungle, but now, he found that this truth seemed so pale and powerless in front of Luther.

"Besides, there are so many planets with life in the universe. Why do you have to keep an eye on the earth?"

Luther continued, his voice still calm and firm.

Fiora couldn't help hearing this.

She stood up excitedly and shouted loudly: "We have been looking for more than 30 years! There is only this one planet with life!"

Her voice was full of despair and unwillingness.

Luther glanced at Fiora and said lightly: "You are trash."

"If you are willing to spend more time and energy to explore the universe, I believe you will be able to find more planets with life."

Although his words were calm, they were like a sharp knife that pierced Fiora's heart deeply.

Fiora's face turned red with anger at Luther's words, but she couldn't refute it.

Because she knew that Luther was telling the truth. They did search in the universe for more than 30 years before they found the planet with life, Earth. However, this cannot be an excuse for them to conquer the Earth.

"You!"

Fiora pointed at Luther angrily, but couldn't say a complete sentence.

General Zod took a deep breath and tried to calm his anger.

He stared at Luther and said word by word: "It's the same question as before! Why are you so partial to this planet!"

"No need to be partial." Luther said calmly.

"I protect every planet with life for the same reason - that is to maintain the balance and justice of the universe. If the destruction of your Krypton was caused by an alien invasion, I would also help; but the fact is not the case, but you Kryptonians have brought it upon yourself."

When General Zod heard this, his anger was ignited again.

He roared angrily: "Shut up! What do you know! What do you understand! You don't understand our feelings at all! You only think you are an outsider!"

Luther ignored General Zod's anger and said calmly: "The purpose of my existence is to protect life in the universe and maintain the peace and justice of the universe. The destruction of you Kryptonians was caused by your internal conflicts and struggles, which led to the destruction of the entire planet. You did not learn from it, but wanted to make up for your losses by conquering other planets. This behavior is no different from the destruction of you Kryptonians."

"The purpose of my existence is to protect Krypton! Protect the people!"

General Zod suddenly said loudly, his voice full of pain and helplessness.

Chapter 672 General Zod sows discord

General Zod's eyes were firm and resolute. He looked up at Luther. His eyes, forged under the heavy pressure of Krypton, were full of indomitable and fanatical.

His voice echoed in the silent battlefield, full of determination: "This is the only mission I have ever undertaken! All my actions are just for this! What qualifications do you have to preach to me! What qualifications do you have to judge the fate of our Kryptonian race for the race on this planet under your feet!"

Luther's eyes were as deep as lake water. He nodded slightly, as if he was respecting General Zod's persistence, but with a hint of imperceptible regret.

"I admire your sense of responsibility."

His voice was gentle and firm, as if it could penetrate people's hearts.

"But a sense of responsibility does not mean that you can infringe on the lives and interests of other planets at will. The destruction of you Kryptonians is a profound lesson. I hope you can learn from it and find true peace and prosperity."

General Zod frowned, his heart was full of persistence in the glory of Krypton, but he turned a deaf ear to Luther's words.

He knew that there was a huge gap between his power and that of the galactic supervisor, but the pride and dignity of the Kryptonians made it impossible for him to accept such a defeat.

However, he also knew that he was no match for Luther, and this feeling of powerlessness made him feel unprecedented frustration.

Kryptonians are indeed not afraid of death, but death without any ability to fight back is something that General Zod cannot accept. He knew that in the face of this supervisor, they could only seek other ways to achieve their goals.

At this time, superheroes such as Batman and Wonder Woman also arrived at the scene. They saw a group of Kryptonians lying on the ground, and Luther, a strange existence, were full of doubts and vigilance.

They didn't know what happened, but they only knew that the atmosphere here was extremely tense.

At this time, Luther suddenly looked at the horizon, and the others were also startled, and then looked over there.

At first, there were only three tiny black spots on the horizon, hanging quietly in the sky, as if they were just a few inconspicuous dust particles.

But as time went on, the three black spots approached rapidly at an alarming speed, getting bigger and clearer.

Their outlines gradually became clear, no longer simple black dots, but showing the sharpness and coldness unique to missiles.

"What is that?" Clark couldn't help asking, his voice full of tension and panic.

"Nuclear bomb."

Batman's pupils also shrank suddenly, and he immediately recognized the radiation signs on the three missiles.

That's a nuclear bomb! His heart was full of shock and anger. He didn't expect America to use nuclear bombs to attack them at this time.

This decision is undoubtedly crazy and stupid, because it will not only pose a huge threat to them, but also bring irreparable disasters to the entire earth.

It is not surprising that America will use nuclear bombs to attack them.

The arrival of the Kryptonians has brought a huge threat to the earth. They have powerful power and advanced technology, which makes the people of the earth feel unprecedented fear and uneasiness.

However, the problem is that the current situation is not clear. They don't know what happened between Luther and General Zod, nor do they know why these Kryptonians fell to the ground.

Batman and his friends have just arrived here and know nothing about the situation here.

They only know that the current situation has become extremely critical and they must take action immediately to prevent this disaster. However, facing such a powerful nuclear bomb attack, what can they do?

"Supervisor, it seems that you are also within their attack range!"

General Zod's voice suddenly sounded, and his eyes looking at Luther were full of provocation and complacency.

In his opinion, this is a great opportunity to sow discord and create a rift between Luther and the earthlings.

Luther nodded slightly, as if confirming General Zod's words. There was no expression on his face, as if all this was within his expectations.

"You see! The creatures of this planet have started a war against me! Next I have the right to fight back! You must not interfere!"

General Zod's voice was full of threats and provocations. He tried to use the earthlings' offensive behavior as an excuse to force Luther, the galactic supervisor, to give up protecting the earth.

He knew that once Luther gave in, it would be easy for the Kryptonians to conquer the earth.

In General Zod's opinion, Luther, the galactic supervisor, must be a proud and inviolable existence. He is in a high position and has great power. He will severely punish any behavior that challenges his authority.

The situation that was originally helpless has taken a turn for the better because of the reckless behavior of the earthlings themselves.

General Zod used his few tactical wisdom and tried to weaken the resistance by sowing discord. He knew that as long as Luther, the supervisor, stopped interfering, no one on Earth would be able to stop the Kryptonians.

Hearing General Zod's words, Batman immediately captured the key information.

He frowned and looked at Luther with a sharp gaze.

Is this mysterious supervisor the key to this war?

Was the situation of those Kryptonians falling to the ground also caused by this supervisor?

His heart was full of doubts and curiosity, but also full of vigilance and worry.

However, Luther did not retreat as General Zod wished.

He looked at General Zod calmly, without any fluctuation or emotion in his deep eyes. He said lightly: "Yes, but the situation is different now. There is a situation that threatens my personal safety, so I have the right to intervene."

As soon as he finished speaking, a huge roar came from the horizon. The three nuclear warheads suddenly lost control when they approached and fell straight down. They were so fast that people could not react at all.

Clark shouted anxiously: "No, it must be detonated in an uninhabited area, otherwise it will cause a large number of casualties!"

Hearing Clark's words, Batman and others also realized the seriousness of the situation.

They knew that once the nuclear warheads were detonated in a densely populated area, the consequences would be disastrous. However, they were helpless and could only watch the three nuclear warheads fall to the ground.

Just when they were desperate, the three nuclear warheads suddenly broke apart in the air and were squeezed into a ball by an invisible force. All the control devices and reaction devices inside them were scrapped, so they naturally could not be detonated.

Throughout the process, Luther remained calm and composed.

There was no fluctuation or emotion in his eyes, as if everything was under his control.

Chapter 673 Punishment of the Earth

Seeing this scene, Batman and others suddenly felt a huge pressure. They didn't know what kind of power this supervisor had, nor did they know how he would deal with this war.

However, they knew better that the appearance of this supervisor had changed the direction of the war.

General Zod was also shocked and angry after seeing this scene.

He couldn't accept that his plan was broken so easily, and he couldn't accept that this supervisor so easily resolved the attack of the earthlings.

He shouted angrily: "Earth attacked the galactic supervisor without authorization, is there no punishment at all?"

Hearing General Zod's words, Batman and others clearly recognized Luther's identity-the galactic supervisor.

Batman and others were instantly filled with shock and awe.

They began to realize that the direction of this war was no longer under their control.

The appearance of this supervisor was like a huge meteorite that suddenly crashed into their world and broke all their plans and strategies.

Batman's heart was full of doubts and worries. He was not sure how this supervisor would deal with this war, nor did he know whether he would pose a threat to the earth.

What he was more worried about was that if the Supervisor chose to stand on the side of the Kryptonians, the Earth would be in a more dangerous situation. This worry was like a dark cloud, covering his heart and making him feel uneasy.

"Supervisor, this is a misunderstanding!"

Batman had to stand up and say. Although his voice was firm, it was also trembling. He knew that what he said now might affect the future of the Earth.

Luther's eyes fell on Batman, and his deep eyes seemed to be able to see through everything. He listened to Batman's explanation quietly, without any expression on his face.

Then, he said lightly: "Are you the representative of the Earthlings?"

Batman's body stiffened, and he didn't know why, a strong sense of uneasiness suddenly surged in his heart. He felt like a deer being stared at by a cheetah, with nowhere to escape.

But he still said with a stiff face: "I am not, the attack just now was the Kryptonian invasion first, and the behavior of the Earthlings can only be called a defensive counterattack."

His words were full of eagerness and pleading, hoping to move the heart of the Supervisor. But Luther just said lightly: "That makes sense."

Then his eyes swept over everyone present again, including General Zod and Clark.

"The authority of the Supervisor cannot be offended!"

General Zod roared in a low voice, his voice full of anger and unwillingness.

But Luther just waved his hand, and an invisible pressure instantly fell on everyone. Batman, Wonder Woman and Clark all fell to the ground, unable to move.

This pressure made them all feel shocked and terrified. They seemed to be pressed down by a huge mountain, unable to breathe or move.

Is this gravity?

Batman asked in his heart. He tried to analyze the source and nature of this force, but soon found that it was beyond his ability.

Then Luther spoke calmly: "Okay, it's normal for the earthlings not to know the situation. But it is also a fact that I was attacked. In order to ensure the authority of the Galactic Supervisor, the earthlings are not allowed to join the Galactic Civilization Alliance in the next 10,000 years."

Luther said calmly.

This sentence exploded in everyone's heart like a thunder.

Everyone present was silent, their faces were filled with shock and despair.

Ten thousand years, what a long time!

For humans, ten thousand years is almost unimaginable.

If the first industrial revolution is regarded as the beginning of the rapid development of mankind, then the glory of mankind has not yet reached 300 years. Ten thousand years, for humans, almost means the end of an era.

The key is that Luther said this directly to the whole world live, which is equivalent to issuing a global judgment.

People looked at each other, their hearts full of shock and confusion. They could not understand this sudden judgment, let alone accept this cruel fact.

And this news will be like a blockbuster bomb, setting off a storm in their hearts.

Humans have always been full of yearning and curiosity for the unknown universe.

They are eager to contact other civilizations, learn their advanced technology, and share their resources. The name of the Galactic Civilization Alliance is both mysterious and tempting to them.

They imagine that after joining the alliance, they can get technical assistance and resource assistance from other civilizations in the galaxy, just like the United Nations.

However, now, this dream has been ruthlessly broken. They lost the opportunity to join the Galactic Civilization Alliance and were not allowed to join for 10,000 years.

This is undoubtedly a huge blow to mankind. They feel extremely frustrated and disappointed, as if the whole world has collapsed.

America, a once powerful and prosperous country, has now become a global sinner. Their behavior not only angered the Galactic Supervisor Luther, but also put the entire earth in trouble.

Their behavior was spurned by the whole world and became a shame in human history.

At this critical moment, leaders of various countries issued statements condemning America's behavior and calling for global unity to jointly deal with this crisis.

However, no matter how hard they tried, they could not change Luther's decision.

Scientists on Earth also tried to find a solution to the problem. They studied what Luther said, trying to find loopholes or breakthroughs.

However, they soon discovered that Luther's words were impeccable. His decision was based on the authority and dignity of the Galactic Supervisor, and no one could change it.

"Remember this lesson, Earthlings."

Luther said calmly.

After hearing Luther's verdict on the Earth, General Zod and his team felt that it was too light, only ten thousand years.

Moreover, the Galactic Supervisor still did not give up protecting the Earth, which made General Zod and his team very disappointed.

Batman tried to say something, but Luther would not let Batman mess up.

So Batman and Wonder Woman couldn't say anything, and Clark was the same.

"The Earth has been punished, and it's your turn next."

Luther looked at General Zod.

"For illegal invasion of other civilizations, according to the Galactic Justice Law, I can sentence you to ten thousand years in prison."

This sentence immediately made General Zod and his team change their faces, after all, they had just come out of the Phantom Prison not long ago.

What does a sentence of 10,000 years mean?

Chapter 674 Give a Chance

"you!"

General Zod didn't know what to say. A Kryptonian wouldn't be able to survive a ten thousand year sentence.

After all, they are not basking in the sun now, and they don't know the relationship between the Kryptonians and the Yellow Sun.

I don't know whether it is the punishment of eternal sleep, the punishment of keeping them conscious but freezing them and making them unable to move, or the punishment of doing nothing and just imprisoning them for ten thousand years?

His eyes revealed the fear of the unknown future and the helplessness of reality.

He looked at the clansmen who had fought side by side, and their faces were also filled with shock and despair. General Zod knew that this sentence was not only a personal punishment for him, but also a heavy blow to the entire Kryptonian people.

"a thousand years....."

He murmured to himself, his voice full of bitterness and unwillingness.

He couldn't imagine how they would survive this endless darkness and loneliness for such a long time. What was even more difficult for him to accept was that this verdict might mean the complete destruction of the Kryptonians.

"The order to launch the invasion was made by me alone. This matter is my responsibility alone. If I am going to be punished, punish me!"

General Zod took a deep breath, straightened his chest, and said loudly.

"General!"

Seeing that General Zod was going to take all the blame on his own, how could Fiora and the others accept it.

"Obey orders!"

General Zod said coldly, if he is sacrificed, the remaining Kryptonians will still have hope. If all the Kryptonians are imprisoned, then the Kryptonians will have no hope at all.

"Overseer, take me away."

General Zod said to Luther.

"No, General, this was caused by my unauthorized actions. It should be my responsibility!"

Fiora stood up and said.

"This is my last order as commander, obey orders, Fiora!"

General Zod snapped.

Fiora was startled. The instinct of obeying orders in her genes made it impossible for her to continue to disobey, so she could only remain silent.

After all, the military genes among Kryptonians have been restricted and adjusted for countless thousands of years. She cannot break through the restrictions of this gene by relying on temporary emotions.

"General..."

Fiora's voice was trembling, she didn't know how to face this difficult choice.

"As the commander, I have the right to decide how to bear responsibility. You just need to remember that no matter what punishment I receive, you must work hard for the future of Krypton!"

General Zod's words are full of deep love and sense of responsibility for the tribe.

He turned to face Luther and said in a sonorous voice, "Supervisor, take me away. I am willing to accept this sentence and bear all the responsibility for the crime."

Fiora, General Zod's loyal deputy, felt mixed emotions when she heard these words.

She is both a loyal supporter of General Zod and one of Krypton's hopes for the future.

However, at this moment, she was forced to stand here, watching helplessly as her leader was about to be judged.

Clark stood aside, filled with unbearability.

He understood General Zod's helplessness and pain, but as an Earthling, he couldn't just watch the Kryptonians invade his homeland. He stared at General Zod silently, with mixed feelings in his heart.

Batman watched all this coldly. He has never had any principle of not killing alien life forms.

He knew very well that if these Kryptonians really succeeded in occupying the earth, what kind of disaster would be faced by the creatures on the earth. Therefore, he has no emotional resonance with General Zod's sentence.

Wonder Woman also said nothing. She stood aside silently, her eyes full of determination and determination. She knew that no matter what the outcome, she would fight for peace and justice on Earth.

However, at this moment, Luther smiled and said: "Don't worry, I haven't finished speaking yet."

General Zod and Fiora were stunned. Could things be turning around?

Luther smiled and continued: "Although you have broken the law, you did not know it before, so in some ways, I can give you a chance to change your ways."

General Zod and Fiora's eyes suddenly lit up when they heard this, and they knew that this might be their only hope.

"What do we need to do?" Fiora couldn't help but ask.

General Zod also stared at Luther closely, waiting for his answer.

Luther smiled slightly and said: "You just want a living planet, and I am the supervisor of the Milky Way. It is easy to find a living planet that conforms to the law of justice in the galaxy for you. But the question is, what can you give? "

Of course Luther will give General Zod and the others a way out. They are all Kryptonians, although he is not a pure Kryptonian, but has become a Kryptonian.

Batman stared deeply at Luther, the overseer of the galaxy.

He found that the supervisor was not a fair and strict person who strictly abided by the law. There was an indescribable light shining in his eyes, as if he was thinking about some deeper issue.

At this moment, Batman was thinking a lot.

He was naturally very interested and relieved that there was such a thing as law in the galaxy.

After all, this means that the civilizations in the galaxy also have their own set of rules and order, instead of being completely in a state of disorder and chaos.

However, Batman also knows that different species, civilizations and ideological forms will inevitably lead to differences and conflicts in legal concepts.

He began to imagine what contents of the Galactic Justice Law might be inconsistent with the legal concepts of the Earth.

Perhaps, on some planets, in order to maintain the continuation and survival of the race, some seemingly cruel behaviors are allowed by law.

On other planets, the pursuit of knowledge and wisdom may be regarded as the supreme value, and the formulation and implementation of laws must also revolve around this value.

Justice is the principle of maintaining fairness and justice, and the law is the means to achieve justice.

Law and justice are not completely consistent. In some cases, law may conflict with justice.

Batman is eager to understand the Galactic Justice Law, but the Earth has just been sentenced to not join the Galactic Civilization Alliance for 10,000 years, and he has no channels to understand it.

However, General Zod's current situation seems to be able to be used to make Luther, the Galactic Supervisor, cancel the judgment on the Earth?

Luther's words made General Zod and Fiora fall into contemplation.

They knew that this opportunity was not unconditional, and they needed to pay some price in exchange for this opportunity.

General Zod and Fiora looked at each other, and hope surged in their hearts at the same time. They knew this was their only way out.

Chapter 675 What is the meaning of

"We can give everything!"

General Zod said without hesitation.

"As long as it is for the future of Krypton, we are willing to pay any price!"

Fiora also nodded, agreeing with General Zod's decision.

Luther smiled and nodded and said, "Very good, then let's talk about the specific conditions."

The following time seemed like a long and intense marathon for Luther, General Zod and Fiora.

General Zod harbors deep worries.

He knew that the survival of his people depended on the success or failure of this negotiation.

And Fiora, as his right-hand assistant, was equally focused, her eyes shining with curiosity about the unknown and expectations for the future.

Luther looked unusually calm, with an indifferent smile on his face, as if everything was under his control.

He knew that he was not only a participant in this negotiation, but also the director of this interstellar drama.

His goal is not only to help the Kryptonians find a new home, but also to demonstrate the power and wisdom of the Galactic Overseer.

Negotiations began, and they first discussed the conditions for the new planet.

General Zod proposed that the new planet must have enough resources to support the survival and development of Kryptonians.

At the same time, the planet's environment must be suitable to accommodate their life forms.

Luther said that he would conduct a comprehensive scan and assessment of the target planet to ensure that it meets all conditions.

Next, they discussed the allocation of resources.

General Zod hopes that on the new planet, the Kryptonians will have enough resources to sustain their life and development.

They then discussed the rights and obligations of Kryptonians on the new planet.

General Zod emphasized that Kryptonians should enjoy the right to live freely, reproduce and develop technology on the new planet.

At the same time, they should also assume corresponding obligations, such as respecting other life on the new planet, protecting the environment, and maintaining peace and equality.

After some intense discussions and negotiations, they finally reached an agreement.

This agreement is undoubtedly a huge turning point for the Kryptonians. They finally have a chance to start over, on a brand new planet.

This agreement is not a piece of paper.

They have to pay a certain amount of resources to the Galaxy Overseer as compensation and gratitude, and they also have to serve the Galaxy Overseer for a period of time.

But compared to the pain and despair of losing my home, it was all worth it.

When the agreement was signed, Luther stood up, with a mysterious light shining in his eyes.

Then a shocking diorama was shown to the crowd.

It was a lifelike appearance of the earth, with blue oceans, green land, white clouds... everything seemed so real and vivid.

Everyone was deeply attracted by this model, as if they saw a new home waving to them.

However, Luther did not let them indulge in this beautiful fantasy for too long.

With a slight wave of his hand, the model began to change.

The picture began to shrink gradually before everyone's eyes. The earth was like a blue marble, quickly disappearing into the background of the universe, and finally turned into an almost unrecognizable dot, and finally disappeared.

Immediately afterwards, the picture on the screen jumped, showing many magnificent pictures of stars and nebulae. Each planet is like a bright gem, dotted in the dark universe. Like the earth, they are constantly shrinking until they disappear from sight.

Everyone present was deeply shocked by the scene before them. They seemed to be in a huge sandbox of the universe, witnessing the vastness and infinity of the universe with their own eyes.

That sense of boundless vastness made them feel their own smallness and insignificance. At the same time, their hearts were filled with awe and curiosity, and they began to imagine what it would be like to live in such a vast universe.

Luther stood in front of everyone, smiling and observing their reactions. He knew that the sight before him was enough to shock them.

He waved his arm slightly, and the picture on the screen changed again. This time, they no longer just saw scattered stars and nebulae, but a magnificent view of the entire galaxy.

It was a brilliant Milky Way, like a huge vortex, slowly rotating in the universe.

They saw countless bright stars twinkling in the universe, and mysterious celestial objects such as nebulae, black holes, and pulsars... all of which made them extremely shocked and amazed!

Luther began to introduce them to various regions of the galaxy. He pointed to the galaxy map on the screen and explained in detail the characteristics and conditions of each area.

Although the area near the center of the galaxy is rich in resources, it has a harsh environment and strong radiation; while the edge areas are relatively quiet but have relatively few resources.

He also told them that when choosing a planet, they should not only consider the abundance of resources, but also consider factors such as whether the planet's environment is habitable and whether there are potential threats around the planet.

General Zod listened carefully to Luther's introduction, filled with anticipation and anxiety. He knew that this choice was related to the future of the entire race.

He must find a place that is both safe and fertile as a new home. He turned to look at Fiora and the other generals beside him. Their faces were also full of anticipation and nervousness.

Luther saw their anxiety and smiled and comforted them: "Don't worry, I will find a place that meets your requirements for you." After that, he waved his arm again, and the picture on the screen began to change rapidly.

This time, they directly observed the entire Milky Way!

They saw countless bright stars flashing in the universe, and saw mysterious celestial bodies such as nebulae, black holes, and pulsars... All of this made them feel extremely shocked and amazed!

They seemed to be on a huge cosmic stage, witnessing the magnificence and mystery of the universe with their own eyes.

The physical model changed again, as if zooming in on a cantilever of the Milky Way. It began to move inward quickly along the cantilever from the edge of the galaxy.

Whenever the picture turned to the stars, it would pause for a moment to let everyone observe carefully. These stars are red or blue, big or small, emitting different light and heat. They seemed to see a new world unfolding before their eyes.

Five minutes later, the picture suddenly paused.

A planet with mottled green and red appeared. This planet is about twice as large as the earth, and its surface is covered with mountains, rivers and oceans.

Its appearance excited General Zod so much that he quickly stepped forward and looked at the virtual image of the planet carefully.

Chapter 676 Searching for a Planet with Life

General Zod could see that the climate environment on the surface of the planet seemed to be very mild, with large areas of forests and grasslands covering the ground. This made him feel very satisfied and looking forward to it.

As the screen zoomed in, the scene inside the planet soon appeared in front of everyone's eyes.

They can see that the planet is rich in mineral resources and water resources, which are important guarantees for their future survival and development.

"We really found a living planet!" Fiora was equally excited and couldn't help but murmured. She looked at the image of the planet on the screen, filled with anticipation and longing.

She imagined what it would be like to live on this planet in the future - there would be a whole new world waiting for them to explore and conquer!

General Zod was so excited that he asked Luther with a trembling voice: "What are the coordinates of this planet?" He couldn't wait to know the specific location of this planet so that he could explore it as soon as possible.

Luther looked at Batman, who was silently filming with the Bat-helmet camera next to him, and casually answered General Zod's words: "The coordinates of this planet are..."

Just when everyone's expectations and excitement reached their peak, Luther suddenly stopped what he was doing. He raised his head with a trace of seriousness in his eyes.

"but,"

He spoke slowly.

"I don't think this planet is a suitable home for you."

This sentence was like pouring cold water on everyone, instantly cooling down the originally excited crowd.

General Zod's eyes widened and he asked in confusion: "Why? This planet looks very good, with a suitable environment and rich resources."

Luther did not answer directly, but enlarged the picture so that everyone could see the surface of the planet more clearly.

In the picture, there is a lush forest, azure sea, and humanoid creatures living a busy life.

Although their architecture is completely different from Krypton and Earth, they are undoubtedly a highly developed civilization.

"Because there is already a civilization of intelligent life up there."

Luther stated the facts calmly.

"This..." General Zod frowned, and the others also looked at each other. They never thought they would encounter such a situation.

"The planet where intelligent life and civilization have been born must be protected by default."

Luther explained further.

"We cannot arbitrarily deprive them of their right to live."

"Keep looking."

Luther's voice echoed in the empty command room, and his eyes were firmly fixed on the holographic projection in front of him, where unknown galaxies were displayed.

General Zod stood aside and seemed to want to say something, but just when he was about to speak, the image of the planet in front of him seemed to be pulled by an invisible force and began to shrink rapidly.

He sighed helplessly, as if he could only temporarily put aside the questions that were about to come to his mouth.

Although General Zod still has a serious expression on his face, if you look closely, it is not difficult to find that a trace of relaxation has quietly appeared between his brows.

He nodded slightly, Luther did not deceive them.

Indeed, according to Luther, they could indeed find a life planet suitable for Kryptonians to live on.

Next, Luther continued to manipulate the magical power, and his eyes traveled among the stars, looking for possible signs of life.

The other Kryptonians in the command room no longer remained silent. They began to discuss quietly, with excited looks on their faces.

After all, finding a new home suitable for survival in the vast universe is a huge hope for every Kryptonian.

The picture continues to fly, and every pause means a new discovery. In the next half hour, the screen paused a total of nine times, which meant that they found nine living planets.

However, it is a pity that eight of the planets have been occupied by other civilizations, and although the remaining one has life, it has reached its end and is expected to be destroyed in a few hundred years.

General Zod frowned as he looked at the planet that was about to be destroyed. He sighed deeply, obviously not satisfied with the result.

At this time, the perspective of the picture has reached the middle part of the cosmic structure called the "cantilever". There are more and more living planets here, making everyone dizzy.

They saw all kinds of planets, some green, some covered with ice and snow, and some with volcanic eruptions. Every planet is full of vitality and vitality, making people marvel at the magic and vastness of the universe.

The people of Krypton looked at the scene in front of them and couldn't help but sigh at the vastness and mystery of the universe.

They thought their civilization was powerful enough, but now after seeing so many civilizations, they realized their insignificance.

However, just as everyone was immersed in the wonders of the universe, they suddenly saw a scene of a cosmic war. This war took place between two living planets, and the fleets of both sides fought fiercely in space.

The sound of explosions, lasers, and the roar of battleships intertwined to form a tragic symphony.

General Zod frowned as he looked at the war scene in front of him.

He turned to look at Luther and asked doubtfully, "You don't care about this situation?"

Luther glanced at him calmly and explained, "Although I am the Galaxy Supervisor, that is not within my authority. I am only responsible for maintaining interstellar peace and stability and preventing advanced civilizations like you from destroying other planets at will. As for the wars between those lower civilizations, they have their own rules and ways of survival."

General Zod was stunned. He did not expect Luther to give such an answer. He thought that the Galaxy Supervisor would have supreme power and could interfere in interstellar affairs at will.

However, Luther's words made him realize that even the Galaxy Supervisor has its limitations and rules.

He asked in confusion, "Then why do you interfere in the affairs between Krypton and Earth?"

"The Earth has not yet entered the interstellar era. In the universe, there is an unwritten rule that wars between civilizations in the interstellar era, other civilizations are not allowed to interfere. However, for civilizations that have not yet entered the interstellar era, we have the right to protect them from the impact of interstellar wars."

Luther said.

General Zod was speechless for a while after hearing this. He shook his head helplessly and looked at the war scene in the picture again.

This cosmic war shocked and helpless him. He had never thought that he could observe a cosmic war from such a clear perspective, which made him feel even more awed by the power of the Galaxy Supervisor.

At the same time, he also realized how small and powerless he was.

Chapter 677 Choose

Batman stood aside, his eyes deep and sharp.

He was not shocked by the scene of the cosmic war like Wonder Woman and Clark, he was more thinking about what was behind it. He looked at Luther, and an inexplicable chill surged in his heart.

He realized that behind the power and rules shown by this galactic supervisor, there were details and cores that were terrifying to think about.

Luther observed this galactic arm, looking for possible life planets.

After a period of careful search, Luther found that there were many interstellar civilizations on this arm, and the prosperity was amazing.

The routes between the stars were extremely busy, and various forms of spacecraft shuttled between the stars, forming a busy and orderly interstellar picture.

These civilizations have developed unique technology and culture. Some are good at space travel, some are good at interstellar trade, and others are fighting races, known for their powerful fleets and advanced weapons.

However, these interstellar civilizations do not coexist completely peacefully. Some powerful civilizations rely on advanced technology and huge fleets to continuously expand their sphere of influence, and even launch aggressive wars against other civilizations.

They strengthened their strength through conquest and plunder, and this expansionist behavior made the interstellar order on the entire cantilever unstable.

And those weak civilizations can only survive in the cracks. They may have unique technology or culture, but they seem powerless to resist powerful enemies.

In order to protect themselves, these civilizations have to choose to rely on powerful civilizations and become their vassals or allies.

However, this kind of dependence is often unstable. Once a powerful civilization declines or disappears, these weak civilizations will also face a huge survival crisis.

Luther is well aware of the current situation of Krypton civilization.

Before the Krypton civilization was destroyed, they might still have a place among these interstellar civilizations, but now there are less than twenty survivors of Krypton civilization, which is seriously lacking in resources and strength.

If they choose to settle here, the result is likely to be destroyed by other civilizations, or fall into endless wars and unable to focus on their own development.

General Zod also said it was inappropriate.

He chose another galactic cantilever and began to advance inward from the edge area.

He observed the new cantilever, which was somewhat similar to the previous one in structure, but also had obvious differences.

There were also few planets with life in the edge area, and most of the planets had been occupied by other civilizations.

However, the owners of these planets were mostly emerging civilizations, whose strength was relatively weak and had not yet formed a stable interstellar order.

Most of these unoccupied planets were in an unstable state.

Some planets were about to be destroyed, perhaps due to supernova explosions or black hole swallowing; some planets were just born, and their surfaces were still covered with thick magma and volcanic ash.

These planets were obviously unsuitable for Kryptonian civilization because they could not meet the needs of Kryptonians for survival and development.

However, as Luther gradually moved his perspective toward the central area of the cantilever, he discovered new changes.

As the perspective changed, the scene in front of Luther changed dramatically. The density of life planets here increased significantly, and planets of various forms were arranged in a staggered manner in the starry sky.

Some of them are blue and green, as crystal clear as jade; some are covered with thick ice, exuding a cold and mysterious atmosphere; others are hot lava planets, with active volcanoes and erupting magma on the surface.

These planets not only have a suitable climate and abundant resources, but also a stable environment, providing good conditions for the reproduction of life.

More importantly, several interstellar civilizations have appeared here.

In the virtual scene of the control room, the stars of the cantilever seem to converge into a gorgeous cosmic picture.

The relationship between these civilizations seems to be more harmonious than that of the civilization on the cantilever just now. They have just begun to contact and communicate, and there has been no war or conflict between them, which gives the Kryptonians a glimmer of hope.

Life planets are scattered like pearls in this star field, each with its own unique ecosystem and civilization development trajectory. However, although civilizations have appeared on these planets, there are very few civilizations that have truly entered the cosmic stage.

Those civilizations that have entered the cosmic stage have only just begun to explore the universe and are not yet able to go beyond the scope of the star system.

In the control room of the Kryptonian main ship, the soldiers' excitement surged like a tide. They looked at the scene in front of them, their hearts full of longing and expectation for the future.

They knew that this would be a moment that would change the fate of Krypton.

General Zod stood in the center of the virtual scene, his body turning with the rotation of the scene, his eyes lingering on every life planet.

His face was filled with excitement, as if he had seen the future prosperity and prosperity of the Kryptonians.

However, he also understood that this choice was not easy.

He needed to find a planet suitable for the survival of Kryptonians. This planet needed to have sufficient resources and a stable ecological environment, while avoiding conflicts with other powerful civilizations.

At this moment, Luther's voice sounded in the control room.

He casually found an area where life planets were relatively concentrated, froze the picture there, and then said to General Zod: "Choose, which planet do you want."

"Really, really let us choose?"

General Zod confirmed with Luther again. His tone was full of expectation and nervousness, and he was afraid that all this was just a beautiful fantasy.

Luther smiled and nodded, his eyes revealing a kind of confidence and calmness. He said: "The entire galaxy is under my control, and I will give it to you if I say so. However, you need to choose carefully, because each planet has its own unique characteristics and risks."

When General Zod heard this, his doubts instantly dissipated. He knew that the person in front of him was not ordinary, and his promise must have full weight. So he began to carefully select a planet suitable for Kryptonians to survive.

In the virtual scene, General Zod's eyes stayed on every life planet, and he carefully analyzed the data and information of each planet. He considered the basic information of the planet, such as the size, mass, rotation speed, and orbit of the planet, as well as the key factors such as the planet's climate, ecology, and resource distribution.

He tried to find a planet that was suitable for Kryptonians to survive and avoid conflicts with other civilizations. However, this choice was not easy. He discovered that although some planets were rich in resources, they had harsh climates and were not suitable for survival; although some planets had pleasant climates, they were short of resources and could not meet the needs of the Kryptonians.

Chapter 678 New Planet

The camera in Batman's bat helmet recorded frantically, transmitting these precious data to the Bat Cave, which he could never obtain theoretically.

Of course, it is essential that General Zod chooses which planet as the new birthplace of Krypton, and he must also record it carefully.

After all, he wants to avoid the possibility that General Zod and his men may make a comeback.

The vast Milky Way, in a completely defenseless state, instilled intelligence into him almost like a flood.

The vastness of the Milky Way made Batman's heart tremble.

Countless stars, planets, and galaxies interweave into a gorgeous picture, and each planet carries unique life and civilization.

At this moment, these civilizations are revealed in front of Batman like a flood, and their prosperity, decline, struggle, and cooperation are like a magnificent epic.

However, behind this spectacular scene, Batman sees more hidden worries.

In this universe, the earth is like an insignificant dust, which may be invaded by alien civilizations at any time. The humans on Earth are still immersed in their own little world, unaware of the threats from the outside world.

It's a pity that Luther, the galactic supervisor, did not show the situation of the forked cantilever branch where their Earth is located, otherwise Batman could learn about the possibility of invasion by alien civilizations on Earth.

After watching an interstellar journey, Batman's horizons were greatly broadened. He saw those dazzling stars and felt the vastness of the universe.

However, at the same time, his old problem - caution - also broke out again. He began to worry about the problem of alien invasion, even though Luther made it clear that the Earth would not be invaded and would be under his supervision.

Batman's caution is not groundless. He knows that in this universe, nothing is absolute, and any promise may vanish in an instant.

He knows that even if the Earth is not conspicuous in the Milky Way, it cannot be taken lightly. After all, the universe is so big that there are all kinds of wonders.

Those powerful alien civilizations may be looking for new targets to conquer, and the Earth may be their next target.

Therefore, Batman decided to take action.

He is no longer satisfied with being just a bystander, he is responsible for the future of the earth.

He wants to prepare for the worst for the earth and develop a comprehensive defense plan.

At the same time, he began to think about how to make a set of "anti-alien suits", which must be able to resist attacks from various alien weapons, and also need to have strong reconnaissance and counterattack capabilities.

Thinking of this, Batman's eyes became more determined.

He knew that he alone could not fight against those powerful alien civilizations.

He needed to find more partners and form a strong team to jointly protect the safety of the earth.

So, his eyes turned to Wonder Woman and Clark.

These two are also superheroes on earth. They have different abilities and specialties, but they also have the determination and belief to protect the earth.

If they can be pulled into their team, the safety of the earth will be more guaranteed.

Batman knows that if they can join his plan, the defense of the earth will be greatly enhanced.

Thinking of this, Batman walked in the direction of the two, and then he told them about his concerns and plans.

He told them that alien civilizations might pose a threat to the Earth, and they needed to work together to develop a comprehensive defense plan to deal with this threat.

Wonder Woman and Clark agreed.

They knew that they had a great responsibility and understood that no one in this universe could survive alone. So they decided to join Batman's plan and work together for the future of the Earth.

At the same time, General Zod had also completed the selection of life planets.

After preliminary screening, they locked in dozens of potential candidate planets, which showed certain habitability in terms of climate, atmospheric composition, water resources, etc.

However, for Krypton civilization, it is far from enough to just meet these basic conditions.

They need to consider more detailed factors, such as the geological stability of the planet, the maturity of the ecosystem, and whether there are natural phenomena that are harmful to Kryptonians.

After multiple rounds of screening and in-depth investigation, General Zod and his Kryptonian scientific team finally selected a planet with just emerging life forms as their new home.

This planet is located in a star system called "Terra", and its distance from the main star Terra is just right, just in its so-called "habitable zone", which means that the temperature, light and other conditions of the planet are suitable for the development of life.

First of all, the composition of the planet's atmosphere has become an important factor in attracting Kryptonians.

After spectral analysis, scientists found that the composition of the planet's atmosphere is very similar to that of Krypton, mainly composed of nitrogen (about 78%) and oxygen (about 21%), in addition to trace amounts of argon, carbon dioxide and water vapor.

Such a combination of gases not only provides the necessary support for the breathing of Kryptonians, but also ensures the stability of the planet's surface pressure, creating favorable conditions for the survival of organisms.

In addition, the planet's magnetic field and atmosphere also play a vital role.

The magnetic field can protect the planet from cosmic rays such as solar wind, while the atmosphere can reflect and absorb some harmful rays such as ultraviolet rays, ensuring that organisms on the planet's surface are protected from harm.

This dual protection mechanism allows life on the planet to thrive in a relatively safe environment.

However, what excites Kryptonians the most is the planet's gravitational environment.

It has been measured that the planet's gravity is more than five times that of the Earth.

The high gravity environment also helps to improve the planet's geological structure, reduce the occurrence of natural disasters such as earthquakes and volcanoes, and provides a safer environment for Kryptonians to settle.

After selecting this planet, General Zod and his team moved quickly to prepare this distant planet as a new home for the Kryptonians.

They knew that this was a large and complex task that required meticulous planning and precise execution.

"Mr. Supervisor, we have already chosen this planet."

General Zod's tone was firm and left no room for doubt. He knew that this decision was crucial to the future of the entire Kryptonian community.

Luther glanced at General Zod and nodded slightly.

"Have you made your choice? You know, once it's submitted, you won't have to change it."

Although his tone was calm, there was seriousness in his words.

Chapter 679 New Krypton!

"The choice is made!"

General Zod's answer was equally firm. He trusts his own judgment and the ability of his team.

"Then let's go."

Luther waved his hand gently, and General Zod and the others, along with their spaceship and planetary transformation device, were packaged and transported to the outer space of the planet.

This miraculous teleportation ability briefly surprised General Zod and the others, but they soon regained their composure. After all, as the overseer of the galaxy, Luther's abilities are far beyond their imagination.

Although at first they thought Luther gave them the coordinates, and then they flew there by themselves.

I didn't expect Luther to be able to send them all over directly, even the spaceship.

Even General Zod and the others, who were already a little numb from the shock, were collectively shocked again.

But Batman and the others were speechless, because they did not leave together. They could only tell that they had left by the disappearance of everyone and the disappearance of the spaceship in outer space.

Then they can only go back to their respective homes and find their respective mothers. Of course, they are also ready to carry out Batman's plan to talk to Clark and Wonder Woman.

Justice League is coming soon!

Due to the very large gravitational range of the planet, General Zod's spacecraft was quickly captured by the strong gravity in the outer space of the planet and began to fly in the orbit of the planet.

However, they did not rush to land on the planet. Instead, they first sent an advance team composed of geologists, biologists and engineers to the planet for on-the-spot investigation and survey.

The tasks of the advance team are arduous and complex. They need to collect detailed geological data to understand the planet's geological structure, rock formation distribution and mineral resources.

To this end, they used advanced drilling equipment and seismic wave detection technology to conduct in-depth exploration of the planet's crust. After painstaking efforts, they discovered that the planet's core had ended its thermal motion and entered a stable geological period.

This means that the planet's seismic and volcanic activity will be greatly reduced, providing a safer environment for Kryptonian settlement.

At the same time, the advance team also discovered a variety of rare mineral resources, such as rare earth elements, precious metals and energy minerals. These resources will provide important material support for the Kryptonian colonization plan.

They recorded the distribution and reserves of these resources in detail, providing a basis for subsequent exploitation and utilization.

In terms of biological investigation, the advance team also made important progress. They discovered that simple life forms have appeared on the planet, such as algae and microorganisms.

These organisms can not only survive and thrive in high gravity environments, but can also produce oxygen and other beneficial substances through photosynthesis, contributing to the ecological balance of the planet.

This indicates that the planet's ecosystem is gradually maturing, providing a more suitable environment for the settlement of Kryptonians.

The advance team also conducted detailed research and analysis on these creatures and learned about their ecological habits, reproduction methods, and living environment.

This information will provide important reference for Kryptonians to establish their own ecosystem on the planet.

In terms of climate investigation, the advance team also obtained a wealth of data. They found that the planet's climate conditions were suitable for the growth and development of living things.

The planet has a climate pattern with four distinct seasons, and light and precipitation conditions are suitable for the growth of vegetation.

This climate environment is not only conducive to the development of biological diversity, but also provides favorable conditions for Kryptonian agricultural production.

The advance team used advanced meteorological instruments and data analysis technology to conduct long-term monitoring and analysis of the planet's climate, providing scientific basis for subsequent colonization plans.

After gathering this valuable data, the advance team compiled the information and sent it to General Zod.

Based on this information, General Zod ordered the launch of the planet transformation plan. They used advanced scientific and technological means to fine-tune the planet's atmospheric composition, climate and geological structure to make it more suitable for Kryptonian survival.

In terms of atmospheric modification, they used special catalysts and nanotechnology to remove harmful gases and impurities from the planet's atmosphere, while increasing the content of oxygen and nitrogen.

This makes the planet's atmospheric composition closer to that of Krypton, providing necessary support for the breathing of Kryptonians.

In terms of climate modification, they use advanced weather control technology and energy conversion technology to finely adjust the planet's climate.

They increase the planet's light intensity and precipitation, making the planet's climate more suitable for the growth and development of living things.

At the same time, they also established a climate monitoring system to conduct long-term monitoring and regulation of the planet's climate.

In terms of geological transformation, they used seismic wave and energy field technology to fine-tune the planet's geological structure.

They stabilize the movement of the earth's crust and reduce the occurrence of natural disasters such as earthquakes and volcanoes.

At the same time, they also used special materials and technologies to transform and strengthen the planet's surface, providing a safer environment for Kryptonians to settle.

In the process, General Zod and his team paid special attention to protecting the planet's original ecosystem.

They avoid damage to original organisms and the environment, ensuring the ecological balance and sustainability of the planet.

They believe that only in this way can they achieve harmonious symbiosis with the planet and allow Kryptonians to thrive in this new land.

Luther stood on the surface of New Krypton, and the huge planet transformation machine roared, releasing powerful energy to modify the gravity environment of the entire planet.

General Zod stood behind Luther and had subconsciously entered a military state of obeying orders. After all, it was time for the Kryptonian civilization to pay the price.

There is almost always service to the Galactic Overseer, no matter what service it is, women to women, warriors to warriors, technology to technology.

"Supervisor, why don't you bring Kal Al with you? We need the code of life in his body to allow Krypton to reproduce..."

General Zod couldn't help but said to Luther.

"No need, you can just give birth naturally in the future. The destruction of your planet Krypton is because you are too dedicated to your own duties. That approach is wrong."

Luther said calmly.

Naturally, General Zod would not dare not listen to what he, the overseer of the galaxy, said, and perhaps as he said, after all, he is the overseer of the galaxy, and he must know better than them how a civilization should develop.

"However, my scientific researchers told me that without the Code of Life, it would be impossible for us to reproduce."

General Zod then continued.

There are less than 20 people left on Krypton. If you give birth naturally, there will definitely be genetic problems.

Chapter 680 Photosynthetic Reaction

There are fewer than twenty Kryptonians left, and they may be at risk of genetic problems in their newborns, such as birth abnormalities, genetic defects, and various genetic diseases.

This is because in a very small population, genetic diversity can be limited, leading to genetic drift, which can lead to the loss of certain important gene functions and increase the risk of problems for newborns.

And where populations are sparse, the likelihood of inbreeding is greatly increased.

Inbreeding increases the risk of genetic diseases and genetic defects in offspring because similar gene combinations are more likely to cause adverse genetic effects.

"It's okay, I can help you."

With Luther's ability, it was too easy to repair genetic defects, but he did not take the initiative. Instead, he provided them with a batch of drugs called "gene repair potions."

Once a newborn has a genetic defect, injection of this gene repair agent can directly repair the genetic defect.

This solved the problem of possible genetic defects caused by less than twenty people reproducing a civilized race.

"We want to protect the endangered species in the universe, and this gene repair agent was developed based on this need."

Luther said.

General Zod was shocked after hearing this. Is there such a thing?

"To put it bluntly, it is gene editing technology, such as the CRISPR-Cas9 system, which allows the precise location and modification of DNA sequences. Gene repair agents contain genes that can guide CRISPR-Cas9 or other similar systems to reach and repair specific mutations or defects. instruction."

When Luther explained it, the people of Krypton had a headache. The main reason was that their scientific researchers were not omnipotent. They must not have genetics and genetics researchers. Otherwise, there would be no need to come all the way to find Karl Ai. Alright.

They could extract genes from Kryptonian corpses from other Kryptonian outposts for synthesis and in vitro fertilization.

But they have good brains and can memorize things by rote.

"Agents carry molecules (such as antisense RNA) that inhibit the expression of harmful genes, providing healthy gene replacements to compensate for the function of the defective gene."

"Also, by changing epigenetic marks such as chromatin structure or DNA methylation, agents can affect gene expression, thereby correcting genetic problems without changing the DNA sequence."

"Also, the agents contain ingredients that promote cell regeneration and repair. These ingredients can accelerate the recovery or replacement of damaged cells, thus indirectly solving genetic problems."

"Strengthening the immune system, agents contain ingredients that strengthen an individual's immune system, helping the body fight off diseases caused by genetic defects."

"Precision drug delivery, with a precise drug delivery system, can ensure that repair molecules or genetic instructions accurately reach the target cells or tissues."

"And finally a combination of gene therapy and cell therapy, which combines the advantages of gene therapy (directly modifying DNA) and cell therapy (replacing damaged cells with healthy cells) to more comprehensively address genetic problems."

The Kryptonians don't know what they have obtained yet, a multi-functional gene repair potion. This is a technology that countless civilizations dream of.

And now Luther gave them a cart like cabbage.

Then they just have to work hard to have a baby.

"That's part of the upfront investment, and these multifunctional gene-repair agents are very expensive."

Luther said to General Zod and the others.

"I understand, Lord Inspector."

General Zod lowered his head and said.

They are soft-mouthed and short-handed in taking advantage of others, not to mention that General Zod feels that they have nothing that Luther can covet. Isn't it just a civilization that has been exterminated, with less than twenty people left?

What is there for others to covet?

Therefore, General Zod became more determined that he must serve Luther.

Luther stood on the deck of the Kryptonian spacecraft, looking at the center of the Terra star system - the dazzling star.

This is a young yellow sun with bright rays. It is larger and younger than the earth's sun. The yellow sun it emits is extremely intense, like a burning flame, shining brightly in the universe.

General Zod and the others have completed modifying the planet's gravity.

However, when he and his men took off their heavy armor and were exposed to the strong sunlight of Terra Star, they felt unprecedented discomfort.

"what happened....."

General Zod's brows furrowed, and there was a hint of confusion and panic in his voice.

He felt as if his senses were infinitely amplified, the sounds around him became extremely clear, and every slight movement seemed to be roaring in his ears.

What's even more incredible is that his eyes seem to be able to see through everything, not just the surface of objects, but also his own flesh and blood, and even the clear bone structure under the flesh and blood of his hands.

"General!"

Fiora's voice rang in General Zod's ears, and she also felt this strong sensory change.

Her body lost its balance under this intense sensory impact and fell to the ground involuntarily.

Other Kryptonians also felt discomfort. They either covered their ears or closed their eyes tightly in an attempt to reduce this strong sensory stimulation.

According to the setting of the Kryptonians, the gravity of their planet is ten times that of the earth.

In such a gravity environment, the bodies of Kryptonians are fully exercised, and their muscles and bones are harder and stronger than those of Earthlings.

At the same time, their visual, auditory and other perceptual abilities are also extremely sharp, and they can capture subtle changes that ordinary people cannot perceive.

What is even more amazing is that Kryptonians have a special system similar to photosynthesis energy conversion in their bodies. This system can convert external energy into their own power.

Under the red star of Krypton, they can only maintain basic life activities, but under the light of this yellow sun, they can absorb more energy and gain more powerful power.

However, this power is not unlimited. To have superhuman power, Kryptonians need to constantly absorb and store energy.

And the source of this energy is yellow stars like the sun. Under the light of Terra, they felt unprecedented energy fluctuations, but also felt tremendous pressure and challenges.

This is the first time he has witnessed how Kryptonians react so amazingly to sunlight as a bystander.

The sun, the warm and bright energy, falls on the bodies of Kryptonians like a golden ribbon. Their skin, under the sunlight, seemed to be covered with a faint golden glow.
