

Kryptonian 73

Chapter 73 Deciphering the Galaxy Power Super Gene!

After Luther got the information, he went to the Black Wall Base.

With his super speed, he would not even be discovered like Sumali, and he took away the super gene backup of the Deno civilization despite the invisibility magic.

The super genes jointly developed by angel civilizations like the Galaxy Power and the Super Seminary and the Deno Civilization can have backups. There is no reason why the Deno Civilization's own super genes like the God of War of Nostar should not have backups.

However, it was a bit surprising that the backup of Space-Time Rose's super gene was not found.

"Super gene backup of blood samples, this backup method is really original..."

Luther was amazed, and then took away two copies of the super gene backup.

Super Seminary soon discovered it.

"What's going on? Why are the super genes of Galaxy Power and Nuoxing God of War missing!"

Dukao was furious. The backup of these two super genes was the result of their hard work.

Even though Ge Xiaolun and Liu Chuang are living super genes, there is no way to produce their super gene backups without the materials of the super gene engine.

"I don't know, this kind of secret is only known to us internally..."

Lianfeng was also very surprised.

They have never fought against super-divine civilizations like the Angel Civilization, Demonic Civilization, or Death Song Academy, so they have no idea that invading their supercomputer is as easy as eating and drinking.

In the original plot, a super-divine civilization like the Lieyang Civilization is also closed to the outside world. It has been scheming and conciliating, and then successfully plotted against itself.

They rested on their laurels, satisfied with the intimidation brought by the light of the sun, and then were killed by more advanced technology.

The world of Super Theological Seminary is like this. If you fall one step behind, you will lose everything, let alone an entire era.

In their opinion, it is enough to preserve super genes in this way and leave no data on Deno-3 and the super computer.

As a result, they don't even know how they lost it. They don't have the Dark Plane information reading technology like the Angel Civilization's Eye of Insight. Even to monitor Ge Xiaolun, they use satellite monitoring and real-time monitoring.

This technological gap cannot be said to be too big, it can only be said to be between primitive people and StarCraft.

The angels would have known about this matter, but now the entire dark plane information of Yan Dynasty has been blocked and modified, so they do not know about the loss of the super gene of Galaxy Power, otherwise the angels would probably fry.

The angels at the bottom don't know the importance of the power of the galaxy, but Angel Yan still knows.

Then, the biological force field that enveloped Yan Chao suddenly disappeared, and anyone with the ability could read the dark plane information.

"If you ask me, since I can force him out once, I can force him out a second time. Let Taotie continue..."

Morgana was discussing this matter with the God of Death, Karl, when suddenly the demon on Demon No. 1 told her that the dark plane information could be read.

The God of Death, Karl, also knew about this, much faster than Morgana.

"He has left Blue Star?"

This was the speculation of both men at the same time, and then their tests also discovered this.

"Depend on!"

Morgana said her plan to pull someone to block the knife was gone.

Now the dark plane of everyone on Blue Star can be read, and no existence has been found that cannot be read. In other words, Luther has left Blue Star.

Karl, the god of death, was thoughtful. Luther had shown the ability to modify information from the dark plane, so it was very likely that he was still on Blue Star.

However, the God of Death, Karl, could not judge for a moment that the dark plane information had been modified.

Luther considered that if he continued to be so high-profile, Yan Chao might become Taotie's key target again, so he modified his dark plane information and hid it.

He didn't want to care about Blue Star's affairs, it was of no value, but after all, there was Qilin, so he had to take this into consideration.

"The plan is to start as usual."

Death God Carl didn't tell Morgana this, not because he wanted Morgana to go to Thunder. He just knew that if Morgana knew that Luther hadn't left yet, she probably wouldn't dare to go to Blue Star.

Even if he said he would protect her, in fact, the God of Death, Karl, already knew that Morgana dismantled her divine body and then used the materials to reshape it.

He didn't do anything to begin with, he could only say that Morgana no longer treated him like she used to.

It seems that I don't have the same feeling towards Morgana as before. After turning into a spiritual body, this physical feeling is gone, making the God of Death Carl more and more vague about this aspect. The only thing left is probably the spirit. Obsession.

"It's not impossible to continue the plan..."

Morgana thought about it and concluded that Blue Star was of little value to Luther, and the possibility of staying on Blue Star was too low.

No matter how hard her supercomputer calculated, it was impossible to calculate that Luther would stay on Blue Star for Qilin. It was impossible from the perspective of God and civilization. This was the influence of inertial thinking and the reason why there was too little data and information.

Even the God of Death, Karl, based on Luther's ability to modify information on the dark plane, speculated that he was "possibly" still on Blue Star.

"I will let Taotie follow you to direct the actions."

Death God Carl nodded and said.

On Luther's side, after acquiring the Galaxy Power super gene, he couldn't wait to study it.

This is theoretically the highest technological crystallization of the Super Seminary. Whether it is void ability or anti-void ability, void yes and void no are what Luther needs.

The God of War of No Star can only be said to be incidental.

"The power of the galaxy, multiple encryption, the encryption of the Super Seminary Denor civilization, the encryption of the angel civilization, tut tut tut, it's too outrageous."

Luther hit a snag after just the initial decryption. This multiple encryption and authority can only be said to be worthy of the most important super gene.

Unfortunately, Luther has an unreasonable super brain.

Other celestial-level supercomputers require at least 70,000 tons of hydrogen energy per second to calculate, but Luther's super brain only needs sunlight. Even if there is no sunlight, the gas that constantly comes out of his body and the infinite physical strength and energy brought by the Doomsday gene are enough for him to consume.

Luther's super brain began to calculate and decrypt the gene lock and privileges of the power of the galaxy.

These permissions are impossible to unlock without the permission of the angel civilization and the Denor civilization.

But it's like Pan Zhen was worried that the light of the sun would fall into the hands of the god of death Carl, and he went to talk to the god of death Carl in person.

This is just a theory. Angel Zhixin, an important warrior with a biological engine, had his angel genes cracked by Death God Carl, who then developed a strike function against the angel genes.

Galaxy Power is just a few orders of magnitude more troublesome.
