

Kryptonian 75

Chapter 75 Void Technology Obtained!

It just so happened that Holy Kesha remembered that a certain old demon had a clone staying on Blue Star and refused to leave. She had to dig out the secret once she discovered it, and He Xi got involved in the matter of Kryptonian civilization.

So after Holy Kesha received the request for help and information from Angel Yan and others, the supercomputer thought about it and contacted He Xi to give her the coordinates.

He Xi also arrived at the scene very decisively and quickly. If Luther hadn't run fast, he would have run into him.

"The apprentice of the tomboy was attacked."

He Xi knew that Angel Zhui and Angel Yan would not die and could be resurrected, but she couldn't understand Angel Moi.

Why did she keep Angel Moi and only take Angel Zhui and Angel Yan away?

What's special about Angel Zhui and Angel Yan?

He Xi thought of the sub-biological engine at the first time!

After all, she stood at a high enough position, and naturally saw the most valuable things, and would not consider that this mysterious guy came for the angel gene.

What a joke, the apparent value of Angel Yan and Angel Zhui is not as good as offending an angel civilization.

The God-making civilization took a risk?

The possibility is too low.

It is more likely to be... the Death Song Academy of the Styx Civilization!

"Tomboy, we are in trouble. Your dear apprentice is missing."

He Xi has read the information of the dark plane. The other party is very decisive and clean, and has strong strength. Angel Moyi is seriously injured and dying. Fortunately, now is not the time for Holy Kesha to be offline, so it is slowly recovering.

"Yan and Zhui were killed, but the bodies were taken away..."

Holy Kesha said calmly.

"Greedy body, while it's hot?"

He Xi teased.

"The sub-biological engine may be leaked to the Death God Carl."

Like He Xi, Holy Kesha thought of the Death God Carl at the first time.

Otherwise, they really can't think of anyone else in the known universe who can do this, dare to do this, knowing that Angel Zhui and Angel Yan have sub-biological engines!

The Super Seminary has this possibility, of course not the Super Seminary on Earth.

"What to do, He runs very fast."

He Xi asked.

"Of course, we should go directly to the Death Song Academy."

Sacred Kesha said calmly.

"Can it work without evidence?"

He Xi said.

"No evidence is needed. Two angels are missing. It is natural to search the Death Song Academy and the entire known universe!"

Sacred Kesha said.

"Tomboy!"

"If you keep being naughty, I will go to Wuerling to find you."

"Forget it."

On the other side, Luther didn't care about the angels' reactions or what they thought. The two angels' fragrant bodies were in front of him.

But Luther was surprised to find that he was not distracted. It was terrible. When did he become so rational?

After teasing himself, Luther's super brain began to work, closely detecting all the data of Angel Zhui and Angel Yan, reading their dark plane information, and studying their super gene engines.

The sub-biological engine is actually in their dark plane, so Luther found it quickly.

Then it was to decipher the structure of the sub-biological engine.

There has always been a debate about whether the sub-biological engine and the void engine are the same thing, but it is probably the same thing, just a different name.

Luther can even decrypt the power of the galaxy quickly, not to mention the sub-biological engine.

"Finally got it, the void engine..."

Luther copied Angel Yan's sub-biological engine. After the analysis is completed, he can directly transform it and wholesale the void engine.

However, as expected, the sub-biological engine is very low-frequency. In the original plot, Angel Zhixin almost couldn't beat the void warrior of Death Karl.

There are reasons for insufficient energy, but also for low frequency, because the void engine is made of void matter, not void particles.

Luther began to study the void controller that combines void ability and anti-void ability. From the original plot, the void controller is undoubtedly a unique void program and very powerful.

Then he also studied the flaming sword obtained from Angel Yan and Angel Zhui.

Angel Yan's sub-biological engine did not dare to start to resurrect Angel Yan because Luther was next to him.

The so-called Flame-class weapons, such as the Angel's Flame Sword, the Crocodile God Soton's (Crocodile) darts...

This type of weapon can absorb stellar energy, just like super genes, by absorbing stellar energy (that is, light energy) to enhance the power of the weapon itself, to the point where it can surpass the enemy's super soldier's super gene defense ability and effectively kill it.

This type of Flame-class weapon can actually be regarded as a special computer made in the shape of a weapon, which can use light energy to make the weapon exert its powerful power to kill the super soldier.

God-killing weapons, such as the God-killing Axe of the No Star God of War Liu Chuang and the Silver Wings of the Holy Kesha... The biggest feature of this type of weapon and Flame-class weapons is that they are more targeted. Although God-killing weapons also call light energy, they are somewhat different from the way Flame-class weapons violently increase damage.

The principle of God-killing weapons is to produce an anti-dark singularity effect on the contact surface of the weapon and generate delta radiation, achieving an effect close to infinite energy swallowing. In this way, not only can it produce a terrible power that surpasses the defense range of the super gene, but it can also cause damage to the super gene system itself.

Because of this, God-killing weapons pose a greater threat to super soldiers than Flame-class weapons.

Void weapons, such as the great sword of Ge Xiaolun, the power of the Galaxy, and the sub-biological engine of the angel... Compared with the god-killing weapons, these weapons are more lethal. The god-killing weapons attack the genetic level, while the void weapons attack directly from the conceptual level.

If the super soldier and super gene are regarded as a computer, then the attack method of the god-killing weapon is to pick up a weapon and smash the computer. If the computer shell is very solid, it still takes some effort to smash it, while the void weapon is equivalent to remotely shutting down the computer through a virus program, no matter how solid the shell is.

Therefore, the void weapon is the truly terrible existence. No matter how strong the opponent's super soldier is, as long as your void weapon completes the solution of his super gene system, you can play him however you want, because once the super gene of the super soldier is mastered by the opponent, he will be as fragile as a mortal.

After Luther got the sub-biological engine, he threw Angel Yan and Angel Chase into space.

Then the two of them quickly resurrected, and Angel Yan's sub-biological engine was activated, achieving a divine body!

Angel Zhui was used to it, and immediately observed the surrounding environment after resurrection.

"Sister Yan, are you okay?"

Then she quickly asked Angel Yan.
