

Kryptonian 77

Chapter 77 Strong Army and Strong Horses

Luther transformed a bunch of God-killing Engines. These are God-killing Engines installed on weapons. They are the same as the Black Cutter, but the performance has been determined by Luther. There will not be the level of God-killing Power output that can blow up a planet.

Luther has also completed the analysis of the Flame Sword.

It's just that the destruction range of the Flame Bombardment is too large and the power is too dispersed, which is not as good as the God-killing Power in this regard.

More importantly, the God-killing Power is faster to start, and the Flame Bombardment also needs to mobilize the energy of the attached star, which takes time, just like Dilena needs to prepare time every time she wants to use a micro solar flare. It is impossible to raise her hand and use a micro solar flare.

Non-radiation ones can't do it. At most, star energy bombs can, but they must be mobilized before they can be fired continuously.

As for the God-killing Power, it is driven by dark energy and has a very fast speed. It almost does not require charging time and reading time. As long as the dark energy is sufficient, the God-killing Power can continue to burst and output.

Coupled with the unparalleled destructive power and striking ability, this is why the God-killing weapon is superior to the Flame-level weapon.

Of course, ordinary God-killing weapons cannot be compared with the Black Cutter. After all, this is the top-level God-killing weapon, and the record of star-blasting is something that Flame-class weapons cannot achieve.

The angels' Flame Judgment has a wide range of attack, but that is also the use of the bonus of Holy Kesha to mobilize stellar energy comparable to the bombing of solar flares, not the ability of the Flame Sword, and this is the limit.

Luther himself can explode stars with just a flick of his finger, but he can't flow out any of his own super genes and energy cultivation methods such as Qi, so of course he has to use the things of the Super Seminary to arm his men.

The uniform No Star War God super genes, at most, are added with some adjustments and modifications of Luther to the No Star War God. After all, it has lagged behind many versions. In the world of Super Seminary, lagging behind one version is a world of difference, not to mention that they have never thought of transforming the No Star War God genes for so many years.

The people of the Denor civilization are all living off their old capital, and they also boast that their old capital is enough for them to stand at the top of the universe.

"My God!"

The No Star War Gods in front of Luther held the God-killing Swords and were emitting the God-killing power all the time. Just being hit would cause the super gene to be decomposed by the God-

killing power. They also had their own God-killing power energy attack, that is, releasing sword energy. Being hit by this sword energy, basically the third generation was gone on the spot, and most of them were annihilated and decomposed.

The invincible body could not withstand the attack of the God-killing Sword. The fact that the Flame Sword could not hurt the invincible body did not mean that the God-killing Sword could not do it.

Because the God-killing Sword was not only loaded with the God-killing Engine, but also made of the Dark Silver material.

Luther did not think that any enemy could snatch the God-killing Sword from this large group of No Star War Gods, and the fact that the Dark Silver Weapon could not be equipped with the gene engine was only because the pure Dark Silver Weapon could not be loaded. It only needed to use Dark Silver as the shell and the main body was dark alloy to install the God-killing Engine.

This was equivalent to combining the Dark Silver Weapon and the God-killing Weapon together, which was completely comparable to the Void Weapon.

Moreover, Dark Su Yin has a high priority in the Super God Academy world. Even if it is just a shell, it is indestructible, and the peak beast body can directly break the defense.

At most, it is not that strong when it collides with the real pure Dark Su Yin Wu, but the power of God Killing is not vegetarian, and it is enough to damage and destroy Dark Su Yin Wu.

This row of No Star War Gods... should now be called Krypton War Gods. Luther added the genes of Tian Zha, angels, and demons, and gained the ability to fly and cross the stars. Don't look at the version of Tian Zha that is tens of thousands of years behind. People can cross the stars by themselves without replenishing energy.

This alone can show how excellent the original super genes of Tian Zha are.

Each of them has a pair of huge black wings, which is in sharp contrast with the previous gold saints.

However, the peak beast body of the gold saint belongs to the mass-produced warriors of the Krypton civilization. Although the mass-produced peak beast body warriors are terrible, it doesn't seem too terrible compared to the Krypton civilization that can make ten third-generation war gods at a time.

The peak beast body is just a little thicker.

As for whether the Angel Civilization would associate the Kryptonian War Gods' black wings with the Black Winged God who attacked them, that's nothing. Luther said that they must have been slandered by someone to sow discord between them and the Angel Civilization!

Do you think the Angel Civilization would believe it?

They would definitely believe it. After all, the Kryptonian Civilization had no grudges against them, and they had mature technology. How could they covet the technology of the Angel Civilization?

Not to mention the existence of the more suspicious Styx Civilization of the Death Song Academy.

And the shapes are different. My people are all dark silver shells with dark alloy black armor, and a pair of big black wings, and that Black Winged God is black-winged black clothes.

Of course, the judgment of Holy Kesha is the most important. She will not provoke a super-god civilization that comes from the edge space and seems to be very powerful without evidence.

Although Luther is not afraid of Holy Kesha, it is not difficult for him to destroy Holy Kesha. Since the supernova explosion can destroy it, he only needs to use a little force to ensure that there will be no holy atoms left.

The only people who may pose a threat to him in the entire Super Seminary are "Space Principal and Time God" Jilan, and Dinghei. The God of Death Carl is also a bit of a threat, but not much.

What's more, the void engine of the Void Great Sword turned out to be much more advanced than the sub-biological engine. Luther was inspired and made it his own void weapon.

It's just that he doesn't plan to redefine and rewrite his own super gene through this void weapon. Instead, he is determined to use his own void engine to rewrite it. Otherwise, the space principal who fits the universe and is everywhere may get him. super gene.

"Do you want to take someone to grab Sunlight's super gene backup?"

Luther looked at his powerful men. The Lieyang civilization had a super gene backup of the sun's light. This was the setting of the original plot.

And with the strength of the Lieyang Civilization, his men can destroy the Lieyang Civilization without Luther taking action personally, but they may also be dragged to death together.

His men don't have the ability to escape from the self-exploding Sun Star, and celestial level attacks are still very deterrent in the world of the Super Seminary.

It's just that he doesn't have a super gene backup, and he doesn't have the power to study and unlock the light of the sun through part of Di Leina's own super genes.
