

Kryptonian 82

Chapter 82: Developing a Black Hole Engine

It feels very heavy in the hand.

But it seems normal, after all, it is a super material after the black hole matter is recast.

"Is this the void particle?"

Luther was not sure, because he had never seen the real thing.

Then he found a second particle of the same kind, so Luther put it away again.

In order to prevent the death god Carl, who had been paying attention to it, from finding it, Luther used the magic seal magic to seal the two particles.

Death god Carl passed the test of the big clock again.

"Strange, the scale of the black hole explosion this time should have two void particles, why is there still only void matter, was it taken away in advance?"

Death god Carl felt very surprised.

But this is impossible, the big clock is already the most advanced celestial supercomputer in the known universe, even the sacred knowledge treasure house cannot take away the void particles before the big clock.

However, the known universe is not possible, what about the unknown universe in the edge space?

Death god Carl immediately thought of this, and associated it with the last black hole explosion, which also had only void matter but no void particles.

"Could it be that the Kryptonian civilization is extracting void particles by exploding a black hole? Do they also have void technology?"

Death Karl realized this. The deal that Luther had proposed to him included the void engine technology and the core data code of the big clock. At that time, Death Karl just thought that the Kryptonian civilization might also be studying the void.

However, if the explosion of the black hole is related to the Kryptonian civilization and is an experiment of the Kryptonian civilization, it means that the Kryptonian civilization has already gone ahead of him.

He originally just imagined the Kryptonian civilization as the highest civilization in the marginal space, similar to the angel civilization in the known universe.

But now he found that he seemed to have underestimated the Kryptonian civilization.

The sacred knowledge treasure house of Holy Kesha was much slower. After calculating the black hole explosion, a large amount of void matter had disappeared. It was obvious that it was taken away by someone.

"Is it to deal with me that you explode the black hole so crazily?"

Saint Kesha guessed, but because the big clock erased the traces, Holy Kesha had no way of knowing whether it was done by Death Karl, but this already had a feeling of trying to cover up the truth.

After all, who else in the known universe can erase traces in front of the Holy Knowledge Treasure House except the Big Clock?

Devil No. 1?

Morgana simply hid well, otherwise if she was found, even if the dark plane information was erased, Holy Kesha could find it.

As soon as the two met, Holy Kesha read Morgana's dark plane information unscrupulously, and Demon No. 1 could not intercept it.

If Holy Kesha was not only able to suppress Death God Carl, she would have killed Death God Carl without any evidence.

Such evidence is meaningless now, so Holy Kesha put it aside for the time being, but she has been keeping an eye on the remaining black holes. If Death God Carl dares to blast the black hole again, she will give him a hard time.

Death God Carl didn't know about this kind of thing. He just felt that things were a little out of control. Luther blasted two black holes in succession at this time. I don't know if it's the Kryptonian civilization with mature void technology, and the dark plane information that was completely erased. Holy Kesha won't suspect that he did it?

The big clock said that the possibility that Holy Kesha suspected that he did it was as high as 99.999999%!

It was basically no different from the hammer.

But the god of death Carl really wanted to cry out for injustice. This had nothing to do with him. He just picked up a second-hand void matter.

"Krypton civilization doesn't want these void substances. Does it no longer need them?"

The god of death Carl was puzzled. In addition to the disappearance of the void particles, the void substances were all over the streets, not less at all.

Could it be that the Krypton civilization no longer needs the void substances?

So powerful?

Luther couldn't wait to analyze the void particles.

"So that's it. That's how it is."

Luther's strength will also increase with all the superpowers in his body. After two high-energy particle bombardments and high-energy radiation, the super brain has also become stronger.

The difficulty of analyzing void particles cannot be said to be low. At least it is at the same level as the power of the galaxy. Luther has not unlocked the last authority of the power of the galaxy until now. It is not that he cannot unlock it, but that Luther is not interested in and does not want to

unlock it. The previous anti-void ability is enough for Luther to research his own anti-void super gene.

What he lacks is only ideas and breakthrough technology from scratch. In terms of scientific research, Luther is confident that his super brain will not lose to anyone.

"Become a void particle!"

Luther used the transformation magic on an ordinary stone, and then felt that his blue bar actually moved slightly.

You must know that after he became stronger, even the crossing did not consume all his energy at once. His energy recovery speed is much faster than consumption. Otherwise, how can it be called infinite energy and infinite stamina, especially his infinite energy is added with two BUFFs.

One is the infinite energy of the Doomsday gene, and the other is the infinite energy of the Broly gene, double infinite energy.

In addition, the sunlight of Kryptonians is equivalent to "pseudo-infinite energy", which is a triple BUFF.

"This thing can actually shake my mana bar?"

Luther looked at the third identical void particle in his hand.

Because of the tiny lack of mana, the Doomsday gene and Broly gene evolved again, and now it is estimated that the void particles are not consumed.

"My black hole engine can finally be developed."

Luther's black hole engine is certainly not Huaye's black hole engine. That is the engine function program and algorithm that the Death God Carl has created after studying black holes for many years.

However, Luther has his own developed void controller, which can create black holes by redefining space and setting black hole algorithms!

Even his black hole engine is more versatile than Huaye's black hole engine as envisioned, and can move and control the black holes it creates.

And it is not affected by the gravity of the black hole. The final big move is the "incarnation black hole" that devours everything and destroys everything.

Luther used the void engine technology on the void sword to conduct research, supplemented by the angel's sub-biological engine. The Styx version of the void engine could not be obtained, so there was no way to brainstorm and compare prices, but Luther no longer cared about this kind of thing.

Then Blue Star has now entered a situation of total war. Morgana is afraid of Luther and the subsequent angel civilization, so she bombs everywhere.

She stole a nuclear bomb from China, and under the cover of the invasion of the Taotie civilization, she stole five nuclear bombs from the United States, and detonated them in densely populated areas such as India and the Black Earth Continent.

This gave rise to a large number of mutant demons and little demons, all of which were taken in by Morgana to make up for the gap in combat power between them and the angels.
