

M Factory 241

[Chapter 241: I Took the Haitang Island Project.](#)

Amano Heavy Industries is a company, founded by a joint venture between two giant enterprises, one inside and one outside.

In outside, the Anqi Heavy Industry does not say that it is a mechanical person who understands the strength of this company.

Inside is the Tianli Group, a large family-owned company involved in construction, real estate, shipping, and automobile production.

Amano Heavy Industries is equivalent to the sons of the two companies.

Zhang Yutian, who has strong strength, naturally doesn't care about the heavy work of the Mechanical Colossus Type I and knows what will happen after he starts moving his hands and feet.

What would you say? What can Ye Qing do?

Looking for a lawyer to play a lawsuit for a year and a half?

Still, alarm the police, please police investigate the facts?

The three people who went to the hands and feet were the social scum of the Sanjin Palace.

Even caught by the police.

Zhang Yutian finds someone to scare them, and by the way, gives them a heart-breaking sealing fee, and things are all over.

They are also in other provinces.

If in Zhang Dong, Zhang Yutian can use his brain to make the behemoth heavy work in a mess.

When Ye Qing found Zhang Yutian, this squat was sitting on the sofa, swaying his legs and brushing his mobile phone.

Ye Qing took two giant laborers and went to Zhang Yutian.

Ye Qing also sat down on the sofa and gently slammed the coffee table with his fingers:

"Zhang Yutian, pour corundum sand into the giant god I, a good calculation."

Zhang Yutian glimpsed a little and did not seem to think that Ye Qing would find the solution.

"Mr. Ye, what corundum sand?"

Zhang Yutian squinted at his eyes.

"Does it really necessary to pour corundum sand into it? Didn't your products be in the armpits?"

Two giant laborers stood on one left and one right, but Zhang Yutian was fearless.

How can these two bodyguards grow stronger?

He is a partner of the Liangjiang government, and he is the only who can solve the problem that has been plaguing Haitang Island for many years.

"I'll ask you for the last time. You must answer clearly. Don't regret it for a lifetime because of impulse."

Ye Qing suppressed his anger and looked at him very seriously.

"Did you decide to work hard with the Mechanical Colossus Type I?"

"Yes... What about that?"

"What if not?"

Zhang Yutian thought for a second.

He laughed again:

"There is no eternal enemy in this world. Old America has thrown two atomic bombs in Japan, but later, the two countries are still intimate?"

"Country is a case, and companies and businesses are not the same."

"Maybe we are heading towards the opposite side because of temporary conflicts of interest. But as long as there is money, this higher interest is in front of us, and we can turn it into a jade at any time..."

"You must have a long-term vision. If you cooperate with our Amano Heavy Industry to produce the Mechanical Colossus Type I, I promise you here. The net profit of overseas sales is not less than fifteen billion Yuan a year."

Zhang Yutian's meaning was obvious.

He wants to use the unconventional means to force Monster Heavy Factory to work with them.

"I don't understand why you can't study technology and speak with the competitiveness of products."

Ye Qing had got up and gave him a piece of advice before he left:

"There is no shortage of people, so I ask you to remember this sentence."

"Technology doesn't have to be researched; it can also be obtained through cooperation."

Zhang Yutian said lazily:

"I believe that in the near future, Mr. Ye will definitely agree to cooperate with our Amano Heavy Industry."

"Really?"

Ye Qing turned his head, and there were two cold lines in his eyes:

"The cooperation is not cooperative, I don't know it, but I know that you will soon go out of the project. Because the Haitang Island project will be our project. We have the Monster Heavy Factory."

"Ha ha ~ What a big breath."

Zhang Yutian also stood up, and his face was full of confidence:

"If in Liangjiang City, Monster Heavy Factory can take this project, I still believe in three points..."

"Hey ~ in the two rivers, this is related to the 4A level attractions of Haitang Island, whether it can become a 5A level event..."

"If you send ten Mechanical Colossus Type I, it's impossible for Liangjiang to give you the work of Haitang Island..."

"I admit that your technology in the field of mechanical automation is extraordinary, but the flood wall and the Mechanical Colossus Type I, does not match..."

"In order to win this project, we have specially researched the water level of the Lianjiang Rivers over the years, computerized the flow of the Tianjiang River, the impact on the flood wall, and the material of the flood wall. It is also made of alloy technology that is not available in China, without the need to support it. Water pressure..."

"You rely on one sentence; you want to steal billions of projects from Amano Heavy Industries? ..."

"I still rely on you to work temporarily, need to be supported by scaffolding to resist the water pressure of the flood wall?"

"The huge ship sailing on the ocean does not need to know what is called the Tianjiang water wave. In the same way, the Monster Heavy Factory does not need to know this."

Ye Qing nodded to Zhang Yutian:

"We will wait and see."

"Ha ha ~, that Ye always has to come up with a feasible plan. Tomorrow afternoon, the flood wall will be sent to the hydraulics laboratory to test the days of sealing and water flow impact."

"We will wait and see on the test field."

Zhang Yutian looked fearless.

When Ye Qing left, Zhang Yutian groaned and retreated to the sofa and laughed.

He laughed at the Monster Heavy Factory and Ye Qing, and the real technology of the flood prevention wall lies in the flood wall material, which is one of the patented technologies of the parent company Anqi Heavy Industry.

And in the idea of how to hide the flood wall, Amano Heavy Industries has reached its limit.

Monster Heavy Factory wants to engage, can only pick up the teeth.

"Which ship is sailing on the ocean, and you don't need to know what is called the Tianjiang water wave?"

Zhang Yutian laughed badly.

As long as their products pass the test tomorrow afternoon, the Liangjiang government will immediately sign the contract.

Only one day, the young man was not afraid of the wind flashing his tongue.

Ye Qing naturally did not let go on air, leaving the lounge, Ye Qing was contacted by the leader of the Mechanical Colossus Type I subscription agreement.

"I heard that the Behemoth Heavy Industries also wanted to participate in the project of Haitang Island."

At the same time, Mayor Qu came, he also told Ye Qing that the technical test of the flood control wall will be held in the hydraulics laboratory of Liangjiang City tomorrow afternoon.

"Huge Heavy Industry is now involved, can time come urgently?"

"The related work is ready, but it is not very good at delaying the test time."

The Mayor Qu also told Ye Qing that through the previous product design and scientific content, as long as Amano Heavy Industries passed the test, then the project of Haitang Island will be handed over to Amano Heavy Industries.

"Mayor Qu does Amano Heavy Industry, has given the specific construction period of the project?"

"Half-year."

When it comes to the construction period, Mayor Qu does have some headaches.

No matter which option is chosen, he has to face the agate rocky beach that is closed to Haitang Island, and then the entire beach is dug for long-term construction.

During the construction period, Haitang Island does not expect tourists to come here if it is closed.

"Because there is no tourist, I would like to be surrounded by a thick plastic wall during the [working], and also tolerate the roaring mechanical noise."

"I have a plan here, and it doesn't need to be built the sketch in one day."

Even after the phone, Mayor Qu can feel the strong self-confidence in Ye Qing's discourse.

"Mayor Qu, our Monster Heavy Factory has also studied similar projects and will take the products to participate in the test tomorrow without any problems."

"Really?"

Qu Mayor's voice changed in an instant:

"Can we really do it all in one day's construction period?"

[Chapter 242: Higher Technology](#)

Haitang Island is the only tourist attraction in China's four cities and 11 counties.

According to statistics, tourists who come to Haitang Island every year spend 480 million Yuan a year, and causes the island to indirectly drive the economy to 940 million Yuan.

Without Haitang Island, Liangjiang City would not have any other attractive scenery.

Because the construction will last for half a year, the Liangjiang Municipal Government is planning to endure a tormenting ride with long-term pain.

During this period, a large amount of profit will be lost, and the two rivers will also face countless complaints from local merchants and complaining tourists.

There is no way around it.

In addition to the middle of the sea, Haitang Island is far above the water surface, and the rest is flat silt ground.

It is full of various sea otters, many of which are cultural relics with famous names.

In order to make Haitang Island more beautiful, the Liangjiang Garden Administration has also planted many precious flower species on the island.

Shops are naturally indispensable as tourist attractions, and cause the rents to be expensive.

The shops here are all boutiques, many traditional craftsmen, and long-running specialties, one-third of which are concentrated on Haitang Island.

Every year, when the water level begins to rise, almost all the shops on the island will flee, and the flowers and plants will be lost.

Thanks to the progress of science and technology, there is already a solution to the flood problem in Haitang Island.

The premise is that it will be closed for half a year.

There is no impenetrable wall in this world.

The news of the construction of concealed flood-prevention walls on the agate rocky beach in Liangjiang City, have been circulating for a long time among the island's shop owners, and they have collectively opposed the construction of flood-proof walls.

Why did they oppose?

Of course, it is not from noble sentiment, the protection of the original ecological natural landscape, but the willingness to increase artificial buildings in the agate beach.

Building flood-proof walls will affect the economic income of these traders for a long time.

If it affects their pocket money naturally, they will oppose.

As a result, the owner of Monster Heavy Factory told Mayor Qu that this half-year business plan could not be used.

Mayor Qu also broke his head and could not figure out any way to make Haitang Island unaffected by the business of the day.

Solving the flood problem completely.

It is because of the unexpected plans; Qu Mayor is more excited and was looking forward to the proposal.

"As long as you can pass the test of the hydraulics laboratory and do not affect the agate stone view on the beach, we will not hesitate to choose your product plan."

Mayor Qu slammed his chest.

At 2:30 in the afternoon, Ye Qing returned to Longxitan, Zhongyun City with a detailed electronic topographic map of Haitang Island.

In fact, in the morning, when watching the flood wall products offered by those enterprises, Ye Qing also thought about what solutions would be used if he changes the Mechanical Colossus Type I, what solution will he use?

I think that if Ye Qing wants to use a flood control wall, he can only think of it for a long time.

The only difference is that each enterprise is limited by its own technology.

Who made the flood control wall which has more scientific and technological content?

At present, the highest technical content is Amano Heavy Industries.

They are the only company that dares not to use the support column design to fight the Tianjiang River.

Ye Qing wants to beat them. Naturally, he has to come up with a higher technological solution.

The pillarless design is only the most basic, and how to minimize the damage to the beach is also the most basic.

There is also Ye Qing's promise that the one-day construction period is necessary.

It sounds impossible.

Building a flood wall, especially a concealed flood wall, is bound to be a huge project.

Amano Heavy Industries promised to build in a 24-hour uninterrupted construction situation for half a year.

The design plan, Ye Qing has already had a draft.

The only problem to solve is the sealing and leakage prevention between the flood walls.

Traditional flood walls use rubber seals to prevent leakage, which is the same principle as that of the car.

Under normal circumstances, a car can be opened without worrying about water leakage.

All previous companies, including Amano Heavy Industries, also used rubber to prevent leakage.

Ye Qing does not intend to use it, since rubber strips are not suitable for use on automated equipment.

Because of its poor anti-wear ability, the wall will generate large amounts of friction when it rises, and the rubber strip on edge may rise and fall several times, and it has to be replaced.

If you want to save money, don't replace it.

If the rubber strip breaks or leaks, it will be leaking onto Haitang Island.

If it leaks into the lifting machinery, it will be fun.

After calling the Master Craftsmen and metal master experts, Ye Qing decided on using soft metal to act as a sealing strip.

.....

At 2 o'clock in the afternoon of the next day, the hydraulics laboratory of Liangjiang City was in the courtyard.

Mayor Qu Kangxin arrived at the test site ten minutes ahead of schedule.

Today is the day when the inspection team spread across the two rivers and secretly checked them.

He did not need to accompany the inspection team.

Ye Qing's telephone call yesterday made him feel like a cat.

He came to the Hydraulic Laboratory to watch the test work.

A total of three companies participated in the test.

They are [Wuji Metal Building Materials Co., Ltd.], [Hailuo Door Industry], and [Amano Heavy Industry].

These three companies have relatively reliable products.

If the products of Amano Heavy Industries do not pass the test, they can be replaced.

The other two companies know that they are coming to accompany them.

As long as Amano gets through the test, there will be nothing needed from them.

In the Tianjiang water regime simulation room, Zhang Yutian, stands next to the simulation pool, with full confidence in his eyes.

If one month ago, the Monster Heavy Factory told him that he can get out of the way, and that the Haitang Island project is going to be theirs, he might have been a little nervous.

Now not so much, if he leaves, the Monster Heavy Factory only has one day to work.

Just enough to dry up in a short day, I am afraid that even the time to draw a design sketch is not enough?

Zhang Yutian looked at the time, and noticed the tests will start in less than ten minutes.

There was no shadow of Monster Heavy Factory on the scene.

In his eyes, it naturally became the basis of Ye Qing's arrogance, but he could not achieve his promise.

"Mayor Qu, I heard that the Monster Heavy Factory, has a product to participate in this test?"

"Yes, Mr. Ye found me yesterday and asked if he could bring his product to test."

Mayor Qu smiled:

"The more companies that participate, the more we can brainstorm and choose."

"Only one day, I really look forward to what kind of products he comes up with."

Zhang Yutian said:

"The test is about to begin, is he not here yet, will he not show up?"

"The scheduled plan for three-dimensional testing will not be delayed."

Mayor Qu Kangxin fell short of words.

In the Institute of Hydraulic Laboratory, there was a roar of heavy carter.

Mayor Qu Kangxin and Zhang Yutian both stretched their necks to look outside.

A large, long thing, lying quietly in the compartment, covered with canvas, causing people to have a hard time guessing its true face.

"I thought he was not coming."

Zhang Yutian snorted.

[Chapter 243: Monster Heavy Factory's Work](#)

Zhang Yutian looked at the shape of the goods carried on the heavy truck and laughed silently.

It turned out to be a flood control wall.

The thickness should be four pieces altogether.

Even if the length is nearly double that of their product, what can it do?

There are too many manufacturers of flood walls in China, but several manufacturers can guarantee that when the flood barrier is immersed for a long time in the water, they can't prevent the metal from rusting.

Amano Heavy Industries can't guarantee it.

So, there has to be built an underground maintenance passage so that workers can enter the interior, to remove rust and replace waterproof rubber strips regularly.

Amano Heavy Industry can't do it, and Zhang Yutian naturally thinks that the Monster Heavy Factory can't do it.

Thinking of leaving, Zhang Yutian shook his head.

This time, there was really no sense of accomplishment.

Ye Qing got out of the back of the Lagonda and directly ignored Zhang Yutian's gaze.

"Since Mr. Ye is here too, then our test will begin."

Mayor Qu Kangxin is also confused, as this does not seem to be a high-tech thing.

The first one to be tested was Wuji Metal Building Materials Co., Ltd.

Their products are erected flood-prevention walls.

When the flood control wall is close to the ground, the flood control wall opens like a gate to resist flooding.

The first pressure test, the large sealed water flowed through, the workers from Wuji Jin fixed the vertical flood control wall with a nut on the water flow notch and also fixed the other three flood control walls.

After the flood walls were fixed, the staff of the hydraulics laboratory check it and nod, indicating that the test can begin.

The recording camera is turned on, and the engineer in charge of the test informs the pressurizing room through the intercom:

"The pressure is increased to three megapascals. Please report when the pressurization is completed."

For every ten meters the water level increases, the pressure will increase by about 0.1 MPa, and the water level of the Tianjiang River will certainly not rise over 3 meters.

According to the water level records over the years, the water level of the Tianjiang River in the Liangjiang section was at the highest in 1957, when the water level rose by ten meters.

Haitang Island is at a certain height, so with the flood wall at seven meters high, it does not need to fear any flooding.

However, the Tianjiang River rages, especially when the flood is opened upstream.

The impact of the river is not to be dismissed.

The importance of Haitang Island should not be underestimated.

The test is naturally done with the most demanding targets.

The pressure of three megapascals was quickly loaded.

After the engineer had heard the situation, he said in his walkie-talkie:

"No. 01 flood wall, the begin test."

With his voice, the sound of the rushing water immediately sounded in the sealed water flow tank.

When the turbulent water flowed out of the water trough, the flood control wall built by Wuji Jin also sounded:

"Crunch - crunch".

As it slowly closed toward the water trough under the lifting of the hydraulic struts.

Under the pressure of three megapascals, the water hits the floodwall that rises slowly, like a waterfall that flies along the river, splashing the waves and filling the waters of the laboratory.

With a bang, the three-sided flood wall was tightly closed at the water flow notch.

Wuji Jin's boss, holding his lips, stood nervously outside the security line.

Three megapascals under pressure, he wondered if the installed metal deflector could support without problems, but the central seal and the lower seal closed...

The pressurization test will last for five minutes.

The boss of Wuji Jin, who was looking at his watch, was planning to time the test.

An unexpected thing happened, the sealing strips of the second and third passages of the flood control walls enclosed in the flume suddenly burst apart with a "Pop."

The pressure of the urban water supply network is only 0.3 MPa, and the water flow at ten times the pressure is just like a continuous water arrow.

The water arrow hit the porous artificial stone plate at the rear and was quickly absorbed and infiltrated.

"The seal is not complete; this can be improved. Ha ~ ha ~."

Wuji Jin's boss Wang embarrassingly smiled.

Who wants to lose self-confidence?

No one does.

Then the second leakage appeared.

The leakage point was located at the bottom, arrow-like water flow directly hit the hydraulic pole.

Wang's face turned green.

Leakage in this area means that the hydraulic struts and hydraulic pumps have flooded.

The boss's expression has clearly told everyone that their company has not designed these two mechanical parts to be a waterproof structure.

"No. 01 flood wall test failed!"

The engineer announced the result with no expression.

The first level test failed, so naturally, there was no need to continue to test the product.

Wuji Jin's boss said he was helpless:

"Our company predicts that the pressure of one megapascal is enough. This test is too strict by directly raising the standard up by three times."

"Haitang Island is too important on the two rivers. We naturally have to test it with the most stringent standards."

The engineer patted Boss Wang's shoulder:

"It doesn't matter, it's not that difficult to solve the seal."

Twenty minutes later, the products of the Hailuo Door Industry were installed on the test bench.

Their bolder products are the same as the rolling shutters, which requires manual support at multiple points.

The first pressure test was barely passed, and their seal design was quite reasonable, but it fell on the second wave of water resistance.

After successive waves, when the wave level reached five successive waves, the wave height was 5 meters, the product of the Hailuo Door Industry was slightly distorted by the waves.

"Failed!"

The engineer shook his head.

Finally, it was Amano Heavy Industries turn to go.

Zhang Yutian felt that competing with the other two companies was completely insulting to their product.

Their products have been subjected to metal fatigue tests as early as the finalization, which was dynamic high and low cycle fatigue tests.

The power of the test instruments was much greater than the power of water.

So, this test, Zhang Yutian did not have any concerns.

When their product was installed on the test bench. Ye Qing also asked two giants to work hard to untie the cables on the heavy trucks and use the forklifts in the laboratory to carry the four flood walls.

Zhang Yutian quietly turned his gaze over, and Mayor Qu Kangxin also looked at the flood walls with unrelenting attention.

It is a 12 meter-long, three meters wide, shield shape streamline body.

At the bottom of it, the two arcs merged into a sharp pointed corner.

During the handling process, the sharp corner of the shield-shaped flood wall accidentally scratched onto the canvas, and the canvas was torn open with a huge cut.

"You have an anti-flood wall?"

Zhang Yutian was completely confused:

"Twelve meters high, how can it not even have a pedestal? Do you intend to nail this iron plate directly into the gate when the water level of the Tianjiang River is raised? Directly on the rocky beach?"

"You can conclude this."

Ye Qing spread his hands.

"Insane, you must be crazy."

Zhang Yutian felt that the Monster Heavy Factory was hilarious.

This flood wall is clearly an elliptical shield.

The shape is beautiful, but it can only be used as a fart.

It doesn't even have a little bit of automated mechanical structure, even if there is no base.

They are solid iron shields.

Looking at China, there are 90,000 to 100,000 factories that can make it.

This is not funny, is it?

[Chapter 245: Victory Tianzhu was crushed by Mount Tai](#)

Even if it is an iron shield, this is an iron shield that can't be seen anywhere else.

On the dark metal surface, there was no trace of casting or polishing.

The sharp corners at the bottom are located at the centerline position without any difference.

On both sides of the dark metal, there is a silver-white line.

Even more, it looks like an iron shield.

"Mr. Ye, your product..."

Mayor Qu Kangxin was completely shocked by this kind of iron shield.

Yesterday, Ye Qing said on the phone that he would provide a high-tech flood wall solution.

The most important point is that the island of Haitang can be opened normally and not be closed for even a day.

"If you really rely on these iron shields, then the city of Liangjiang wants to make 10,000 pieces, which can also be purchased from local factories."

"Mr. Ye, I want to tell you something very serious."

Zhang Yutian tried his best to calm down.

He could not lose his demeanor:

"We are in a rigorous hydraulic test experiment. You have got an iron plate. Isn't that equivalent to bringing a hammer over and comparing it with a sculpture?..."

"Don't mind, Mr. Ye. I'm a straightforward speaker. If I said something wrong, please don't take it to heart."

Zhang Yutian had a straight face.

"Mayor Qu, the promise of our Monster Heavy Factory, will naturally not let you down."

Ye Qing did not care about Zhang Yutian:

"Don't worry about chatting. He who laughs last laughs best, the test is about to start. First, we should look at Amano Heavy Industry's product,"

Zhang Yutian glanced at the product that was about to be installed.

He said:

"Mr. Ye, after seeing our product, I believe that you will have a more in-depth understanding of the industrial-technological prowess of Amano Heavy Industries."

After five minutes, the test will begin.

For this test, the Liangjiang Hydraulics Laboratory deliberately modified the test equipment to ensure a high degree of consistency with the flood wall.

"The pressure chamber is pressurized."

"The circulating water station is ready."

"The pressure detection system is normal."

The engineer with some gray hair said into the walkie-talkie:

"Let the test begin."

With the order, the recording cameras placed on both sides of the test bench began to work at the same time.

Sealing the water flowing from the sink.

Three silver-gray metal walls about one centimeter thick are slowly rising from the bottom.

The bottom is the hydraulic lifting structure.

If they can win the order from Haitang Island, these exposed hydraulic lifting structures will all be installed in a concrete passage under the ground to facilitate regular maintenance.

Thirty seconds later, the waterfall-like water flow was slowly blocked by three silver-gray metal flood walls.

The waterfall-like water flow disappeared without a trace, and only the blistering sound of the "Glub ~ Glub ~" in the sealed water flow tank.

The pressure gauge has jumped to three megapascals, and four minutes have elapsed.

There are no obvious leaks in the gaps of the three flood walls.

Of course, it is impossible to do without any leakage.

The water flow of three megapascals is equal along the rubber sealing strip, and it must withstand the pressure of 33 kilograms per square centimeter.

The sealing strips of the three flood control panels have a total length of more than 50 meters.

Who can guarantee that no water leaks?

In the past five minutes, behind the flood control wall, there has been a trickle of infiltration.

Zhang Yutian is still the kind of self-satisfied because, in this test, this leak has exceeded the standard of many.

When their products are installed on Haitang Island, the amount of water leaking from them will not affect the beach.

"The test passed."

The face of the gray-haired engineer showed a rare smile:

"You can make the seal for this step, which is beyond my expectations."

"Power of technology."

Zhang Yutian said modestly in three words:

"These rubber seals are of non-toxic polymer rubber, have good oil and water resistance. Even if soaked in water for a long time, no degradation will occur."

"Good, let's do the next test."

The engineer smiled even bigger.

The next one is the anti-water wave test, wave manufacturing equipment that can simulate a maximum of 7 levels of wild waves.

The 7th level of the wild waves, the wave height is 6 to 9 meters, which has far exceeded the biggest wave in Tianjiang's historical record.

Because this set of equipment is prepared for simulating waves, it is used to simulate the inland rivers.

Anti-wave test, if the flood control is strong throughout five waves, lasting a thousand beats, will it be qualified to pass.

When the heavy flood control wall was transferred to the wave test platform, the baffle was used.

A wave four meters high slapped on the silver-gray flood control wall.

"Boom ~."

The flood wall is like a wild boar, which makes loud vibrations.

The sound continued, and the second wave followed.

"Boom ~."

"Boom ~."

The waves did not stop, and the scene was filled with water.

Detectors behind the floodwall, faithfully record the vibration parameters generated by the flood wall every time the waves hit it.

On the instrument display, a wave pattern similar to the human heartbeat is continuously moving.

The engineer who led the test looked back and forth on the flood wall and display.

If the vibration becomes larger and larger, it means that the metal material of the flood wall will be fatigued and will be deformed at any time.

However, the flood control wall of Amano Heavy Industries has been holding for over half an hour, and the vibration amplitude is still within the qualified limit.

These are violent tests that simulate extreme water waves that are almost impossible in the Tianjiang River.

As long as they pass the test, Haitang Island can guarantee 100% safety.

"The test passed!" The engineer has clapped his hands happily.

"I am convinced, in the end, is a joint venture, the technology is so good."

Wuji Jin's boss Wang sighed.

"Behind Amano's Heavy Industries, there must be Anqi Heavy Industry, and the funds must be from the Tianli Group. Of course, it is very powerful."

Li Zong of the Hailuo Door Industry has a constipated expression:

"We seem to be here to be humiliated."

"Mr. Ye, now do you see the strength of our Amano Heavy Industry?"

Zhang Yutian felt that his victory balance here has been carried by a Taishan Dong-like force.

"It's our turn to test."

Ye Qing continued to ignore Zhang Yutian.

"Ha ha ~."

Zhang Yutian took two steps, went to Ye Qing, and said quietly:

"Mr. Ye, you are not trying to grab our Amano Heavy Industry's project?"

"Let us look here, as long as Mayor Qu and the eyes of the engineers are not completely paralyzed, you can't grab the project with your Monster Heavy Factory..."

"I am not targeting you alone, but saying that Amano Heavy Industry, but also the Anji Heavy Industry behind, the things you have made are all rubbish."

Ye Qing touched the nose and nodded his head.

"You..."

Zhang Yutian's face flushed red:

"Well, I will have to watch your work. You can take out the broken iron shield and turn on the vaporizer."

With the help of the machine, the three shield-shaped flood walls from Monster Heavy Factory were quickly installed at the port of the sealed water flow through, which is a deep pool-like reservoir, enough to accommodate the strength of the flood wall.

When the three beautifully designed flood walls are fixed, the top is just the same as the bottom of the water outlet.

The engineer in charge of the test immediately ran over and shouted:

"Wrong. You should block the flood wall directly at the water outlet."

"Nothing is wrong." The Master Craftsman on the side looked at the little old man.

"Right? Then tell me, you have such a solid flood wall, do you have long legs, that you can climb up by yourself later and block the water outlet?"

"Who told you it was solid?"

The Master Craftsman said as he took out a strangely shaped wrench from his backpack.

With a click of a button on the wrench, a triangular protrusion behind the flood wall opened.

When the orange-sized cover was removed, the worker slides over the cable and the card at the front end of the cable with a bunch of quick wrist movements.

Screwed in the slots of the interface inside the lid.

The engineer and Zhang Yutian were a little stunned.

These flood walls must also be plugged in.

Mayor Qu thinks that he should go over 100,000 Yuan because he really can't think of how this product can work, and not delay the normal opening of Haitang Island.

"What is the maximum working pressure for your test equipment?"

The Master Craftsman looked at the engineer.

"9 MPa."

"Good...good..."

"So, please adjust it to 9 MPa."

"There it's at 9 MPa."

[Chapter 246: Limit Tes](#)

The master craftsman has always been direct since there is no euphemism in his inventive spirit.

The line is a line, or a line is not a line, there are no other paths.

Obviously, the chief engineer in charge of the test thought it wouldn't work, so he still let the pressurized chamber rise the pressure to three megapascals.

Zhang Yutian laughed wryly and smoked in an out of the way corner. Obviously, it was no longer necessary for him to say anything.

The Monster Heavy Factory can't make a big ocean this time.

"The test will begin."

When everything was ready, the chief engineer rushed to the intercom.

The chief engineer's voice has just fallen, the pressure chamber and the circulating water station have not yet come to open the valve.

"Buzz ~ Um ~ Um ~!"

Three iron shield-like flood walls fixed on the test bench ejected three silver-white metals to the top of the test floor and were closely attached to the water flow valve.

Zhang Yutian heavily rubbed his eyes.

When he glanced over, he could not seem to find the top of the floodwall, there wasn't even a gap.

How did it change in the blink of an eye?

The chief engineer was also ruined by such an abrupt visual illusion.

"Buzz ~ Um ~ ~."

For two seconds, there must be three silver, shiny metal walls.

There were no gaps.

They hadn't noticed any gap before, there is only one possibility.

Between the metal baffle and the base, the gap is very small, so small that it is easy to ignore.

For example, the gap between the engine piston and the cylinder is small enough to be ignored.

High-precision slitting, along with extremely fast pop-up speeds.

If it's only these two points, then they have completely Bested the product of Amano Heavy Industries.

Zhang Yutian's heart thumped quietly.

Zhang Yutian was quite comfortable.

This kind of product that can be produced in the middle of the night is definitely not able to pass the stress test.

Because Zhang Yutian did not see the rubber strips on these products.

There is only a blistering sound of:

"Gu-Du-Du-Du-Du-Du" in the water flow tank.

A minute passed, and there were no signs of water seepage behind the three metal walls.

Two minutes passed, and the people on the scene had already started talking.

Three minutes passed, leaving behind the three-sided metal wall, without even a drop of water leakage.

"That's impossible."

Zhang Yutian couldn't keep his calm:

"Three MPa pressure, even our products have leaks. Why, when they don't even use rubber seals are there no leaks?"

"We rely on technology."

Ye Qing gave him a look.

"There is no reason to have any leakage..."

The chief engineer in charge of the test quietly asked in the intercom:

"Pressure room; is everything functioning normally on your side?"

"Everything is normal, three MPa pressure."

"That..."

The chief engineer in charge of the test was a little embarrassed, and at the same time, he looked forward to it:

"So, you will put the pressure up to five megapascals."

"Understood, the pressure was raised to five megapascals after twenty seconds."

The sound of the blistering sound was heard in the sealed water tank.

The engineer in charge of the test found the three metal plates remained intact and did not have any water stains leak.

"Up to seven megapascals!"

The chief engineer in charge of the test decided to put the dots on the I, but it was not to fight against the Monster Heavy factory.

Only for a purely professional curiosity.

Many companies bring their products to test them and often end up detecting problems.

He wants to test where the limit of the product is.

"Up to seven megapascals after thirty seconds."

Sealing The sealed tank sounds like the wailing of a prehistoric beast.

As the pressure increases, the entire sealed tank begins to vibrate.

"What's the situation?"

The boss of Wuji Metal Building Materials was relatively close, causing the sound of the sink vibration scared him, he hurried back a few steps.

With this retreat, he just withdrew to the instrument panel.

"My God ~ the pressure value has reached seven megapascals."

Boss Wang looked at the data on the instrument panel and quickly retreated a few more steps.

Seven megapascals, if there is a jet of water, its force when hitting a person, can be considered as bad as a car accident, it is no different.

"Seven trillion pascals?"

Li, the chief of the Hailuo Door Industry, was also shocked:

"This engineer, only measured three megapascals, why is it now at seven?"

"Misunderstanding, misunderstanding."

The engineer in charge of the test was flushed by sweat and hurried to pass nine megapascals:

"This is a master product, let me go to nine megapascals to test."

After that, the chief engineer glanced at the metal flood wall that stood on the workbench, and his old face reddened further.

With the pressure at seven megapascals, the product of the Monster Heavy Factory hasn't hard to move, and there is still no water leaking through the back.

This kind of direct crushing of all of their company's products, shocked all members present, along with their pride.

Seven megapascals is not a problem, then up it to nine megapascals?

Every square centimeter is under a pressure of nearly one hundred kilograms of pressure.

"Let's try it!"

The chief engineer in charge of the test was nervous and excited, notified the pump room.

Zhang Yutian is like a child whose beloved toy was taken away.

His stomach hurt.

Nine megapascals were the maximum working pressure of the test equipment.

It took a minute for the pressurized chamber to raise the pressure.

"Booming ~."

It seemed like there was a train in the sealed tank, and the three flood walls were the black holes leading to an unknown world.

When the vibrations were transmitted into them, the vibrations disappeared without a trace.

"This kind of sealing technology..."

The chief engineer was completely convinced, turned his head, and smiled and asked the Master Craftsman:

"Can I ask how you did it? I can't see a rubber seal for the flood wall; how can it do that without dripping?"

"In industrial manufacturing, not only rubber materials can be used as seals."

The Master Craftsman squinted at him:

"There is aluminum, lead, indium, stainless steel, non-metal materials, ceramics, graphite, cotton sheets, aerogels."

"We use soft metal material, as long as the gap between the two metal walls is controlled within a certain precision, it can be completely sealed."

"Metal materials can withstand much more pressure than rubber."

"In the end, it is because of the gap in industrial technology."

"Oh this, gentlemen, you are right."

Zhang Yutian wanted to find a place crack to hide in, he could not utter a word for a long time.

"Whoop ~ Whoop ~ Whoop ~."

"Warning ~ Warning ~."

In the test field, an icy electronic sound suddenly sounded, and a red warning light was illuminated.

"The pressure in the tank exceeds the maximum limit. Please stop the test immediately. Please stop the test immediately."

"Quick lower the pressure in the pressurized chamber."

The chief engineer's face was green, and the product was not subjected to the maximum pressure.

If they tried to test the product in their laboratory, the danger is too dangerous to the water conservancy laboratory, there are no horrible events that make people laugh and generous.

At the end of the test, the chief engineer really didn't know what comment to give, but he had to scratch his white head and smiled and asked:

"Master, the anti-water wave test, how big can it support?"

"The biggest one."

The biggest is a seven-level wild wave, the wave height is 6 to 9 meters, which far exceeds the biggest wave in Tianjiang's historical records.

Upon hearing the opening of the seven-level mad wave.

The staff in the lab silently took out a dozen plastic raincoats from a storage box and sent them to each person.

Zhang Yutian, who had taken the raincoat, became even more green.

[Chapter 247: The principle is this](#)

Why?

Why did they spend a whole month investigating the water situation in Tianjiang?

Also, a professional metal fatigue test?

As well produce high-end technology products?

Is a day really enough for the Monster Heavy Factory to cause the complete defeat of their own technology?

Zhang Yutian had an extremely dissatisfied heart.

"The product so strong, what did they use?"

Zhang Yutian, who suddenly thought of a key issue and sneered.

"Your product, the light hull is 12 meters high, if you want to install it on the rocky beach of Haitang Island, I'm afraid you have to dig foundations of fifteen meters deep and counting the time needed for the construction of underground buildings, concrete maintenance walk - it takes a whole year..."

"Our product requires half a year of construction."

One year to build and six months to build. There is no comparison.

The crowd suddenly stopped.

They all understood the necessary time of the construction of a flood control wall, the gap between one year and six months, was not so simple.

They can't wait an extra six months.

The population will lose billions of Yuan.

When the island is closed for a year, it will take a long time to recover the prosperity of the past.

Mayor Qu opened his eyes wide, and he in his heart more than the amount of technology, he cares more about construction time.

"Who told you that the products of our Monster Heavy Factory needed to excavate the agate rocky beach and build a fifteen-meter deep concrete foundation?"

"You ha ~ if you do not dig up the agate rocky beach, how can you block the elevated water level?"

Zhang Yutian was like he was shot with chicken blood, fighting in high spirits:

"Looking at the world..."

"The first industrial city Cologne used the flood wall in 1984..."

"The beautiful Danube River in Austria..."

"The flood control of the North Sea in the Netherlands..."

"And the Tianjiang River in china."

"In the upper reaches of these cities, they are prone to flooding."

"All flood protection walls must have pre-excavated and built concrete pedestals..."

"Please tell me, are you going sticking glue on the agate rocky beach?"

Zhang Yutian's emotions were out of control, but he still keeps a clear line of clarity.

The construction time has become his biggest and only advantage, and he must firmly grasp this.

Everyone is holding their breath, and Zhang Yutian's questioning also becomes their biggest concern.

In the early days of the Ming Dynasty, Haitang Island was officially named. "Two Rivers County."

Seven years later, Governor Tan Zhonglin of Guangxu raised funds to build a branch building on Haitang Island."

Ye Qing responded to Zhang Yutian:

"As early as the early Ming Dynasty, Haitang Island was just a reef beach with river surface. The sediment in the river was slowly silting up. Today, Haitang Island has become a large island with an area of 1.6 kilometers."

"Rocky Agate Beach must be on the island of Haitang."

"Then work on the agate rocky beach, even if it is hidden afterward, the entire agate rocky beach must be plowed to build a hidden artificial building complex."

"Who can guarantee that the agate rocky beach will be restored to the same shape after the construction?"

"When the river rises, the guests who come to visit the two rivers pass through the bridge across the river. From a distance, a circle of artificially built steel walls divides the agate rocky beach into two halves, and the original ecological scenery is completely destroyed. The discerning tourists might make irresponsible remarks."

"The front of the agate rocky beach is the river, the river is muddy, and the rock is below the sand."

"The flood walls designed by our Monster Heavy Factory do not have to be installed on the agate rocky beach."

"It's away from the agate rocky beach by dozens of meters, using large ship-borne hydraulic equipment to break into the rock layer below accurately. In the middle of the river, Haitang Island is surrounded by a circle."

"We have calculated that the river water dozens of meters away from the agate rocky beach is only 1.6 meters deep, and the sediment layer is 2 meters thick. Our submersible floodwall will be completely parallel with the river bottom after breaking into the rock layer. The 8:4 and 4 meters deep are all nailed into the rock layer."

"Rock is a natural pedestal. When the water level of the Tianjiang River rises. The floodwall is hidden at the bottom of the risen river. Even the highest historical water level of 1957 cannot cross the flood wall we designed."

"So, Zhang Yutian of Amano Heavy Industries, do you understand?"

There is a great quiet.

The whole experimental field was completely silent.

The test engineer holding the walkie-talkie in his hand almost broke it because of the squeezing of his fingers, ah if only he were less than forty years old.

The walkie-talkie was no longer necessary, and naturally, there is no longer any other thoughts, so the opening command of the anti-wave test was issued.

Diving flood wall?

"My God..."

"If the flood wall is installed in the river water ten meters away from the agate rocky beach, it will not only be completely perfect but also completely preserve the original ecological environment of Haitang Island."

The engineers who are two Jiangren people were excitedly trembling:

"In this way, Haitang Island can still operate as usual. Visitors could go to the beach to pick agate stones."

"There is no construction on the agate rocky beach at all, and there will be a natural landscape."

"This is a fantastic design beyond imagination..."

"Even if the water level of the Tianjiang River rises, tourists can still fully travel to the island."

"You can also enjoy a different and magnificent view."

Mayor Qu Kangxin felt his blood pressure rise because of excitement:

"The river is a few meters high outside, and Haitang Island is like a paradise."

"The most important thing is that Haitang Island, doesn't have to be closed during the year, and you don't have to close it for half a year or even close it for a day."

“Before at Liangjiang Tourism Bureau, there has been long-term complaints from tourists that the water quality in Tianjiang is too turbid. They look at the beautiful agate rocky beach, but they can’t swim in the water.”

“Ha ~ ha~ If you use this type of submersible flood wall, we can completely separate the water from the other side of Haitang Island and inject clean, fresh water for tourists to swim. The floodwall can also guarantee the safety of tourists.”

The engineers and Mayor Qu Kangxin have already fallen into a huge circle of happiness.

The submersible flood control wall is 10 meters away from Haitang Island and is generally parallel to the surface of the river.

Then, when the flood season comes, Liangjiang City will have a new and magnificent landscape.

A magnificent landscape created by technology, this technological landscape firmly defends the safety of Haitang Island.

The testing equipment of the water conservancy laboratory cannot fight these floodwalls. What safety aspects do they have to worry about?

This is the perfect combination of technology and nature!

"I... I... I..."

The mayor who first climbed out of the happy circle, went to Ye Qing, and he held Ye Qing’s hands:

"Please forgive me. I am too... too excited."

"Is this submersible flood wall be completely waterproof after being nailed into the rocks?"

"The pressure of nine megapascals can’t cause leakage. There is no problem if the water depth is less than two meters."

The engineer in charge of the test answered the question of Mayor Qu.

"Haha ~ Mr. Ye, I represent the entire people of Liangjiang City, and I would like to express my sincere gratitude to you and the Monster Heavy Factory for your ingenious works."

"Mayor Qu is too polite."

Ye Qing while looking at Zhang Yutian whose face was whiter than paper and smiled:

"In fact, there is also the merit of Amano Heavy Industries."

Mayor Qu turned his head in confusion and looked at Zhang Yutian.

The latter’s face turned from white to green, and from green to red, and his eyes were desperate.

The original victory of Amano Heavy Industries was because there was Anqi Heavy Industry and Tianli Group.

In an inappropriate way, others wanted Monster Heavy Factory to be transferred to their group.

[Chapter 248: Annual salary of 8 million](#)

Amano Heavy Industries did not win the battle.

The product manufactured by the Monster Heavy Factory in one day, whether it is a precision treatment or an alloy formula, is enough for the Monster Heavy Factory to set foot in the construction market and walk to feel safe.

The most important point is that the product design concepts of the two heavy industries are too wide.

This design gap is like a propeller plane, with a jet plane.

The propeller plane flies very fast and can't reach the speed of the jet.

It is difficult for Zhang Yutian to accept this result.

In order to seize the opportunity of the inspection team, the city of Liangjiang wants to do more and more, and change Haitang Island from a 4A level attraction to a 5A level.

In this process, the price that Liangjiang City is willing to pay will definitely make any enterprise crazy.

Originally, Amano Heavy Industry's wishful thinking was very good. The total project of Haitang Island was quoted at 1.2 billion Yuan, and their net profit was around 800 million Yuan.

Not a big profit, the profit can reach ten times or even twenty times.

As a short answer example; as early as the 1990s, domestic factories imported foreign machine tool equipment, and the damage could only be repaired by foreign technicians to repair it. The stainless-steel dust cover on a machine tool would cost a thousand Yuan.

If you want it, you can't buy it. You can find something to replace it, and you won't be able to provide a repair service in the future.

This is called a monopoly. Later, when the same type of machine tool can be manufactured in China, this stainless-steel dustproof cover can be sent directly for free.

Originally, Amano Heavy Industries also planned to try a taste of monopoly. Even in the face of the Monster Heavy Factory, it was full of confidence to casually grab the project.

Then...

The project flew away, and Zhang Yutian not only lost 800 million Yuan but also his face and the image of Amano Heavy Industries.

"Very good, your Monster Heavy Factory is the winner."

It doesn't make any sense to stay here.

Zhang Yutian screams and greets the workers.

"Monster Heavy Factory is still there. If there is any good project for Amano Heavy Industries, I will continue to compete."

Ye Qing waved:

"Amano Heavy Industries is a loser."

"Mr. Ye, this kind of submersible flood control wall, how long can you produce it?"

If Mayor Qu is a woman, his eyes are absolutely affectionate at the moment.

Can Haitang Island become a 5A level attraction?

All count on the Monster Heavy Factory work.

In fact, Haitang Island has been trying to apply for China 5A level tourist attractions.

The 5A level represents world-class quality. When the National Tourism Administration publicizes tourism resources, the preferred one is these 5A level scenic spots.

Before the National Tourism Administration has blocked Haitang Island at 4A level.

The mayor Qu also has some drums in his heart.

When he builds a flood control wall on the agate rocky beach,

Will he get a comment that destroys the original ecological landscape?

Now that this worry has been completely eliminated, the mayor Qu can naturally wait for it to build a submersible flood wall.

"It takes 40 days to produce a flood wall, and the flood wall is nailed into the underwater rock layer with extremely high precision. If we provide equipment, it will take a week less."

"Nature has handed over to you the construction."

Mayor Qu looked at Ye Qing with a stunning look.

"We even found all the construction team in Zhongyun City, and have the ability to build a submersible flood wall as required."

At three o'clock in the afternoon, Ye Qing, who signed the project contract and left the city of Liangjiang with satisfaction.

2.2 billion!

This is the price negotiated at the end of the project.

The mayor Qu Kangxin guarantees that he will go back to the meeting and use the fastest speed to recover the special budget to build this wall.

On the way back to Zhongyun City, Ye Qing couldn't help celebrating his victory.

He patted his thigh and laughed:

"This is almost faster than stealing money. In the future, the company staff must closely watch Amano Heavy Industry's work."

"Yes boss, this is equivalent to selling 220 Mechanical Colossus Type I."

The Master Craftsman also followed the sneer:

"Our cost is only 200 million."

Ring bell phone.

The car audio connected to the Bluetooth sounds like a ringing tone, and Ye Qing presses the call button on the steering wheel.

The phone was called by the company's network manager he was embarrassed:

"Boss, the hacker has appeared again..."

"It only took 10 minutes for the other party to bypass our upgraded firewall. This time we were prepared to be able to save the super-administrator account. But they used the transmission protocol to send a lot of computer virus attack data. Our host processor, when processing this data, enters an infinite loop..."

"Fortunately, we have two sets of mainframes, and the official website indicated 404 for a few minutes, and then it returned to normal."

"Is the other party's IP checked?"

Hearing the news of the hacker again, Ye Qing has a headache.

Now the two hosts are completely independent, and there is no information except the official website management background.

One is invaded, and the other is enabled.

The replaced hard drive is patched according to the path being hacked.

"Our technology is limited, we can only judge that the other party is abroad, and even no country can determine it."

"This knot is mostly a ghost of Amano Heavy Industries."

Ye Qing's consolation can be said:

"We have physically isolated all the important hosts, and there are not many losses, we are going to pass them slowly."

"Your network department can recruit some computer technicians who know how to attack and defend. As long as technology is excellent, wages are not a problem."

"Boss... As far as I can see, I know there's a most suitable candidate."

Ji Ke said hesitantly:

"In the China Hacker Alliance, there is a dark network section. This Alliance usually recruits hackers. Last year, Qihoo of the China Hacker Alliance posted an annual salary of 5 million Yuan to recruit this administrator."

"The administrator replied he was still in college and would consider this proposal after graduation."

"This year, Qihoo hasn't moved. I will not wait. What if this administrator just graduated from university?"

"I rely on him... he is now a college student. [A bird in the hand is better than ten at the top of the tree.]"

Ye Qing thought that when he goes to college, he estimated when the Hacker Alliance gave a 5 million Yuan by year salary, can squat on the table and ran to work.

"So, you post a notice if Qihoo offers five million, we offer eight million."

"Good boss, if you can recruit this hacker into the company, it would mean you came to Buddha, and our company no longer has to worry about the security of the network."

At five o'clock in the afternoon, Ye Qing arrived at the Longxitan factory.

Even if the hacker has blacked out the entire company's network, Ye Qing can't lose much.

The factory is his core.

There is nothing black except that there is a network cable for connecting to the Internet and a computer that does not store any information about the factory.

Even the wireless network has been cut, and the mobile phone is directly connected to the 4G.

In Ye Qing's eyes, there is no concept of traffic value.

Ji Ke, the president of the computer club, reported that the post had been sent out and that the administrator is very polite. As long as he saw the post online, he would definitely reply.

After getting out of the car, Ye Qing went straight to the limonite area.

Today, when he was in Liangjiang City, all the sorting equipment in the limonite area had been installed and debugged. Finally, he was able to carry out metal smelting, which is the most basic and important part of modern industry.

[Chapter 249: The mysterious administrator](#)

In the limonite area, there are three Mechanical Colossus Type X-shaped plates here.

The Mechanical Colossus Type X is a machine that can experience the industrial strength most in the behemoth heavy work.

It is still unable to mass-produce at present, and until now, Ye Qing has only made five of it.

A series of three mining and only two constructors

The other side of mass production is its power.

The 150-ton weight makes it easy to lift its arms and lift the weight of the same weight. Replace the special mining equipment, it can easily break and crush any rock.

In the middle of the mining area, a deep hole seems to lead to the unknown world.

It was a tunnel dug by four angry miners, in order to meet the requirements of 10,000 tons of steel per day.

The four angry miners drilled into the bottom of the limonite, purely using brute force.

The iron ore was cut out into a crack, with a standard of 500 tons, which facilitated the crushing work of the Mechanical Colossus Type X.

A Mechanical Colossus Type X-shaped, a new cutting wheel made of hard alloy, cut the rough iron ore strips into a stone of about 100 tons.

Then the other two Mechanical Colossus Type X-shaped, respectively grab hundreds of tons of ore shining same as the diamonds, to broke it.

The pieces of watermelon-sized ore are sent to the sorting equipment through the conveyor belt and the dumplings.

These pieces of ore are crushed between two pieces of hard-rolled grinding discs and ground into uniform particles, which are then sent to a ball mill for lapping and grinding into powder.

Finally, the magnetic separator uses the principle of metal strip magnetism to separate the metal in the powder from the rock.

In order to achieve the production of 10,000 tons of pig iron per day, its mining sorting equipment is naturally huge.

Ye Qing stood in front of this magnetic separator, just like standing next to a huge concrete processing station. The lower separation port, the gray-black iron powder, and the gray-white stone powder are continuously separated as the flood gates.

Iron powder is smelted into raw iron ingots, and those gray-white stone powders are not wasted. After being incorporated into binders and other minerals, they are natural floor materials.

At 8 o'clock in the evening, the first batch of 1,200 tons of iron powder was mixed with the catalyst prepared by the Master Metal Expert.

It was die-cast into iron powder and sent to a preheated sintering furnace for pig iron sintering.

Traditional steel mills smelt iron powder, which is usually sent to the blast furnace and is sprayed with pulverized coal or heated with heavy oil and natural gas.

The use of electric heating like Ye Qing does be rare, because electric heating costs are high.

Now that the price of energy products is lower, many steel mills have abandoned electric furnaces and dedicated high-contamination coal and oil.

The cost is so high, there is almost no pollution, and the smelting speed is abnormally fast.

The sintering process lasted for an hour. When a piece of raw iron ingot was placed in front of Ye Qing, Ye Qing almost thought that he was blind.

These iron ingots, and the iron ingots in his memory, have exactly the same appearance like what he guessed.

Ordinary raw iron ingots, the surface is full of pits, the appearance can also see a lot of impurities embedded in it, he is likely to break when it is hit hard.

These pits are the gas eyes produced by the combustion of impurities in the iron powder during smelting.

The Master Metal Expert smelts different pig iron.

It is a silver-white material with a smooth surface like a mirror.

It is impossible to see even a large, variegated hair.

These iron ingots can be directly put into the metal smelting center for steel making, and the steel products to be smelted must have the performance of the steel on the market regardless of toughness or strength.

Steel is the most widely used metal in the factory.

Its quality has improved, which means that the entire plant will improve its performance whether it is built by itself or sold.

These steels are completely smelted in the factory, and the price is far lower than that from the market.

Every small step in the industry represents a big step ahead in the industry.

Ye Qing is full of energy and has been busy producing until late at night before returning to the office to rest.

In addition to the monsters in the factory, some people are resting later than Ye Qing.

The network manager can be on duty tonight, responsible for real-time monitoring of the two hosts in the company.

Since being hacked again in the afternoon, Ji Ke has been constantly refreshing the interface, looking forward Real Eye.

Suddenly the mysterious administrator appeared.

Only members of a higher than the 10th level, are eligible to enter the hidden section.

There are only three full-level users in the hidden section.

The administrator who wants to be mentioned is called [Real Eye].

This Real Eye is the most skilful than them.

Some good statistics shows it has been two years since the Real Eye appeared.

A total of 47 companies suffering from hackers had been attacked successfully behind the scenes.

Qihoo is the leader of China Hacker Alliance, and he is even willing to pay a 5 million Yuan annual salary reward to engage Real Eye.

The hacker community is far from being so glamorous on the surface.

Only in roadside magazines, you can go into the bank's internal system move your fingers to the unrecognizable plot and transfer hundreds of millions of plots into your account.

What does he do for this year?

His computer technology is no better, but even a hundred megabytes of independent light can't be tolerated, even an alien notebook can't afford.

Why does he do it with companies that have Gigabit-independent fiber and have large servers?

Want to rely on technology to play the original capital accumulation, upgrade equipment?

Sorry, the basic way to make money is written in the law. Wanting to make money is usually against the law, and it is against the bosses of companies that are over 100 million.

From the bosses who dig meat, it is natural to have the bosses hired experts to counter-track the consciousness.

In addition to those very few talented people, most hackers can only sneak up on the fishing scam.

This has to be scaring, pray not to be found by the network police, and sued by the company.

Having a decent and stable job is almost everyone's dream.

The Qihoo Company is willing to open a five million Yuan by year salary to hire real-life posts and become the envy of everyone.

Then the Real Eye, the reason why he did not graduate to the university, he was euphemistically rejected...

This year, Qihoo has not yet moved.

A company called Monster Heavy Industries has thrown a live branch to the Real Eye and is willing to pay an annual salary of 8 million Yuan.

Ye Qing does not ask for a large network security company, or in the way of giving rewards.

The reason for asking the Real Eye to help is very simple.

The other party's IP abroad!

He found the detailed address of the people, and he can't do anything. The network police can't have the right to enforce the law internationally.

Only a thousand days to be a thief, there is no thousand days to prevent thieves.

Ask someone to resist an attack next time?

With this money, it is better to ask a heavyweight to come and then use it as a basis for creating your own network security team. This is the correct solution.

At three o'clock in the morning, Ji Ke in the company pay attention to the website host and from time to time refresh the post to pass the time.

He can't remember how many times he refreshed, which may be a thousand times, or it may be two thousand times.

He has some sad sleeping eyes, suddenly staring at the screen.

In the comments below the post, a user named [Real Eye] left a comment inside.

[Chapter 250: Reasons for Refusal](#)

At the time of posting, Ji Ke have already explained the general process of hacking of the company's mainframe.

And described the company's network department, to form a strong network security team plan.

When you refresh the message, you can watch the message time.

A minute ago.

This shows that Real Eye is very likely to be still online, and he writes with both hands.

With admiration, Ji Ke carefully read the reply of Real Eye.

Real Eye:

First of all, thanks to willing to pay an annual salary eight million to me.

I have already read some information on the Internet. I have to say your company has great potential, and it is inevitable there are competitors.

My college degree has been completed, and I am qualified to take the postgraduate exam.

Next, my focus is still on the academic level. The computer network is just my hobby.

I will have been away from school for two weeks.

During these two weeks, in order to thank the Monster Heavy Factory for the invitation, I can try to help you track the intruder.

After reading the news, it's cool to wow.

This Real Eye is still a bit of a tyrant, recommending a post-graduate qualification.

Not all schools, and universities are qualified for the graduate school.

The research is usually only between 958 and 211 colleges and universities, and there are very few students who can get this qualification.

Now the master said the computer network was a priority.

Even if there are eight million Yuan annual salary waiting for him, Real Eye also believes it is more important to complete his or her studies.

Sighed, the meter is going to reply, and the short message in the station suddenly reminds Ji Ke.

When Ji Ke open the information, it is Real Eye.

The content is an email address, Real Eye tells the meter, you can contact yourself through this mailbox.

If Monster Heavy Factory is willing to work with me, you can open the port 3389 on the mainframe.

Give an administrator account.

Port 3389 is the remote-control port, and the administrator account is naturally the super-administrator account.

Only the Lord can do this plan, Ji Ke immediately return the information and said next morning he asks the boss.

.....

The next day, the sun rose to the top of the head, and over the Longxitan factory.

A group of seagulls came flying.

When the fish and shrimps were preying on the quiet sea, Ye Qing got up.

Soon after he got up, a big red envelope almost knocked him down again.

On the other side of the two rivers, they directly transferred a deposit of 1.1 billion Yuan to the company's public account.

With the deposit, Ye Qing follow the production of the submersible flood wall.

Eighty of the monsters have been recruited by Ye Qing.

The production of the submersible flood wall is not too technically difficult, it is that, the iron quantity required is too large.

Ye Qing took out the production schedule and re-planned the production tasks for the eighty monsters, so that all the submersible flood walls were produced within one month.

According to the different production processes,

the rational allocation of each worker's position and production sequence is a skill that every factory worker must be skilled in.

The Master Craftsmans have to say a product can be made in forty minutes, otherwise it will never be delayed until forty-one minutes except for power failure.

This also allowed Ye Qing to work out the most reasonable schedule.

Even the work of the five Mechanical Colossus Type X and the four angry miners were carefully planned by Ye Qing in detail.

If they didn't like to eat at all, it would be a delicious food for ordinary people.

Ye Qing must invite a class of chefs, to serve for this gang of hero monsters.

Last time Ye Qing ordered a truck of crisp and sweet watermelons from his schoolgirl.

As a result, the Master Expert took a few bites and said it tasted worse than oil.

It was a waste of time to eat it.

The telephone bell on the desk interrupted Ye Qing's office work.

Ji Ke call and report to Ye Qing that he had a chat with Real Eye last night and sent him the email address of the Real Eye.

Ye Qing estimates that Real Eye is very rich, maybe a rich second generation.

Listening to Real Eye, he can help the company guard for two weeks and track the location of the intruder.

Real Eye doesn't want to come, and Ye Qing can't tie him up.

Therefore, it is a great way to open the remote-control port of the company and re-apply for a super administrator account.

Ye Qing have never seen Real Eye, and naturally there is no trust.

It's just that two hosts want to chat, and it doesn't matter if one more.

The super account can only manage the official website for finding if there is something wrong, and then close the official website to cancel Real Eye of the administrator account and recover the control for the account.

As for the next two weeks, Ye Qing has no effective means, so he will find another candidate during this time.

After all, his own cyber security team will only be subject to any one.

Out of courtesy, Ye Qing sent a thank-you email to Real Eye in the name of the president of Monster Heavy Factory.

The content is a few words, after the completion of his studies, the Monster Heavy Factory welcomes his joining.

Ye Qing didn't think the email was sent for less than five minutes, and Real Eye responded with an email.

Total leaf:

Thank you for your kindness.

Maybe you will guess in your heart I am not from a very good family, or I am from a very large one.

Maybe you think I don't care about the five million or even eight million annual salary.

Actually not, my family is very ordinary.

If no one knows my identity, I am very happy to work for your company.

It's just I have been offending too many people in this line.

If I stand in the sun, I am afraid that those people used to deal with me with despicable means.

Two months ago, a small game company was hacked by hackers, causing users to log in for a long time.

The other party extorted 100,000 Yuan.

After the game company had reported at the police, I helped them trace the general location of the hacker.

As a result, the hackers installed the camera outside my rented house.

They ran and still threatened me in the forum.

If they find me, they will definitely make my life in danger.

There are a lot of similar situations, so I dare not accept any company invitations, so it is very easy for someone to find me.

So, please, excuse me and thank you.

I can hide behind the scenes and help you against this group of hackers through remote control.

After reading the mail, Ye Qing admitted his views on Real Eye had changed dramatically.

He must be like him, a beautiful man with a strong sense of justice!

Ye Qing replied, I respect your personal wishes very much.

If you encounter difficulties in life, or if your security is threatened, please contact me at this number.

Ye Qing sent his number to Real Eye and also added a photo of the album, where two monster workers wearing disguise costumes standing together.

In the photo, the monster workers with the sunglasses.

The face is cold and standing beside the Mercedes-Benz G 65.

Even if it is a custom-made suit, it can't hide them. It can make the bodybuilding champions look like the explosive muscle lines.

The Mercedes behind him gave the height of these two humanoids.

Thirty seconds later, Real Eye sent out a very exaggerated picture of water mouth emoji.
