

M Factory 261

Chapter 261: Urban Construction Bureau opens big move

Disassembly means that civil air defense projects can be removed but what to build?

The civil air defense project must be retained.

Which means that no matter what is built, there must be a sufficient area of civil air defense underneath.

Su Yuan, the boss of Xinghe Construction, is a very honest person.

He said it was useless.

He really didn't plan to change it or didn't plan to continue building it.

After two days, Ye Qing discovered that Su Yuan was not coming to these ruins.

The first thing that could not be resisted was the nearby Skyhawk Shopping Plaza.

The department store was blasted and countless scattered concrete pieces were piled up on the open space.

And the blockage between the two buildings also occupies a large area.

The Skyhawk Shopping Plaza was originally very high-profile, and it was damaged by these ruins and blocking nets.

Many young people who pursued fairly appropriate lifestyles were no longer willing to set foot here again to this space.

The turnover is less than one-third of the usual turnover, and the merchants who have settled in it are not selling anything.

Those who suffered business disruption and shut down their shops collectively went to the Urban Construction Bureau building to protest.

Now the inspection team is still inspecting in other cities.

They will not return until they have finished transferring several cities in Jiangnan Province.

They will put together the cities that submitted the application for grading.

Finally, the two cities with the highest comprehensive scores were selected, and the title of National Health and Civilization City was awarded.

After the night of the merchants' protest, the Urban Construction Bureau dispatched an engineering team to enter the scene to carry out the ruin cleaning work.

Then Ye Qing heard that Xinghe Construction abandoned the development and re-listed the land for sale.

The price is 1.5 billion Yuan...

A piece of undeveloped land that has been demolished and located in a prime location in the city center, with a price of 1.5 billion.

If placed in peacetime, in order to grab this piece of land, developers can brain hit the pig brain.

But now, all day long, since Xinghe Construction has sent out the news of a change of hands

Dozens of partners who have participated in the funds have called for their repayment, while none of the businessmen was consulting for buying the terrain.

To be honest, even Ye Qing has little interest in this terrain.

Although the terrain is the best in the middle of Zhongyun. Who can hide the civil defense project underground? Who would like to gnaw at this hard bone?

Seeing that the project was indefinitely extended, the Urban Construction Bureau was anxious.

A piece of land in the center of the city is deserted there.

It is not a matter of money, but a serious impact on the city's appearance; the eldest terrain in the city center is abandoned there.

The director of the Urban Construction Bureau, Le Zhengdong, personally called the owner Su Yuan to come to the office to discuss the issue.

As soon as he entered by the door, Le Zhengdong was shocked by the appearance of Su Yuan.

His eyes were covered with blood, and his face was haggard.

"Boss Su, we do not know about the underground civil air defense project, that's our mistake."

To hunt, it is necessary to be a bellman.

The director Le Zhengdong hopes that Suyuan will continue to develop the project.

"In this way, as compensation, we will come to clean up the ruins. The cost of the modification will also be funded by us and will be exempt from your deed tax and property tax."

"Le Director, our construction of the Galaxy is failed."

Su Yuan shook his head:

"Now all the partners have to withdraw money from me, for that, I can't build a large fitness venue that everyone needs..."

"Unless you can help me, transform the civil air defense project into an underground parking lot and ensure that the twenty-two-story building can be built on it."

Le Zhengdong wants to have that ability but what director should he be?

It is early to go to the team to do the engineering project and going to the world's construction tycoon to grab land.

Le Zhengdong also carried out another preferential measure to install the water pipe network inside the building for free.

To tell the truth, the incentives for these items are so great that Su Yuan is so excited.

However, Su Yuan still shook his head and made it stronger.

After that, the building had to be built before they could enjoy these preferential measures.

Turning the land around is already the best way to stop loss.

When the land is changed, they can still hold the money and go to other projects.

Even if they can't make a comeback, they will not drag the company down.

When the Galaxy Construction renewed the land transfer news, the bosses driving all kinds of luxury cars all came to the opposite side of the Blue-sky Building, the ruins.

The price is also 1.5 billion Yuan.

The Urban Construction Bureau and the Civil Defense Office have joined forces to the who to the and offer three preferential measures.

Except for any modification costs of the civil air defense project below.

The water supply pipeline will be laid free of charge, and the deed tax and property tax will be exempted.

Now that the equipment in the underground civil air defense project has been emptied.

In order to let these bosses, understand the internal structure more intuitively, the Civil Defense Office not only connected all the lighting power but also attached the structure diagram to the passage.

In the past few days, Ye Qing also asked employees to pay attention to the land auction in Zhongyun City.

Building his own building, every time in the office, looking at the empty plot of the window, Ye Qing's idea is stronger.

Everyone in calligraphy, seeing a good rice paper will be itchy, can't help but leave the ink treasure.

The master of engraving, seeing Huang Tianshi, who is hard to find, can't sculpt anything on it.

I am afraid that it will tickle for several years.

By the same token, Ye Qing wants to build a building of his own.

So, every time he sits in the office and looks at the open space opposite, and he always wants to build something on it.

The heart is moving, originally Ye Qing did not intend to bite that hard bone.

But when three preferential measures come out, let alone Ye Qing, even the developers who were not willing to buy the land went to look at the underpass.

The three preferential measures, just to avoid the deed tax and property tax, is enough to make people crazy.

Because the larger the area, the higher the building, the more taxes you have to pay.

Often, a building by paying these taxes can make the building's total investment 20% more.

There is now a tax exemption policy if you can build ten layers of buildings on it...

This kind of pie falls from the sky, oh no ... who has ever lost the gold ingots which encountered?

The developers have all red eyes, if possible, they hope to build the tallest building in the middle of the cloud.

That doesn't make a living day...

It's said that people are old and fine, and this is not a fake.

The Director of Urban Construction Bureau is more clear about this than anyone else.

He knows in his heart that it is impossible to build more than ten floors of buildings on the civil air defense project.

Then you only need to pay a small price to attract a large wave of developers.

If there is any cow, can you build more than ten layers?

Ha ... ha...

The civil air defense project was built in the early 1980s due to architectural techniques and limitations of thinking at the time.

There is no supporting structure underneath this fortification, and the load-bearing wall is also designed according to the original department store building.

To build more than ten floors, this kind of thing, even the Urban Construction Bureau's backyard, Zhang Grandpa, who is responsible for trimming greenery.

Even Grandpa Zhang, who is in charge of pruning and greening the backyard of the Urban Construction Bureau knows that it is impossible to build more than ten floors up this kind of thing.

[Chapter 262: Interested Giants Heavy Industry](#)

The underground passage, which can accommodate two trucks in parallel, was almost squeezed out of the trampling accident by the developers who had big waists and rounds.

Above the corridor, it was parked just like a car show.

Audi, Bentley, Mercedes-Benz, BMW Seven Series, Jaguar, Range Rover...

Not only in the urban area of Zhongyun but even the real-estate tycoons in several counties far away Zhongyun have also come.

This year, real estate is difficult to do competition is increasing, and costs are getting higher and higher.

Free two huge taxes!

This temptation is like playing the legend in the past, GM patted you on the shoulder and said:

"Brother, as long as you take Shabak, we will reward you with a dragon slaughter."

This will cause the sky to turn upside down.

For example, in the passageway now there is a well-dressed boss with two little honey girls, wandering in the mood visit the historical building, wandering in the passageway.

Directly behind the same boss, a rich boss grabbed the two little honey arms, as if he were a dog that fell on shit to eat.

"Sorry ..."

The boss dropped a sentence of apology and ran away in a hurry.

The structure is hung on the passage.

After the bosses rushed down with their mobile phones or tablets, they drilled into the steel gate.

When they returned to the nest, they disappeared inside the passageway, and Ye Qing came in.

As an ambitious man, Ye Qing also could not refuse to build a state-of-the-art industrial building in his own city center.

Bones are hard to chew.

However, the three preferential projects of the Urban Construction Bureau turned out to be born, and Ye Qing calculated the accounts in his heart.

If he builds his own ten-story building, he can save 100 million Yuan.

The 30-story building can save 500 million Yuan.

If he builds a forty-story building, he can save nine hundred million.

Building one hundred floors can save two billion...

Two billion, how astronomical is this a number?

Usually, this number is only suitable for describing the number of sperm or the kind of elephants.

So Ye Qing is coming with data glasses, 3D cameras, and Master Craftsman.

Taking a picture of the structure on the channel, Ye Qing also drilled into the interior of the steel gate.

This underground building has three narrow arched refuge areas in addition to numerous reserves and a small outdoor office serving as a small service agency.

The refuge area is somewhat like a tunnel, especially long and narrow, without any support. Each refuge area can accommodate 2,500 citizens.

Now many project developers and bosses are in the refuge area on the orange lights, with the engineers brought frowning to discuss what.

When Ye Qing came here, these original and eager bosses had a very ugly shadow on their faces.

"I knew there was nothing good about the heavens."

With nine words A man with a mustache and a splayed character complained:

"Look at the structure here, there is no place to support the main beam of the building, even the next time you squat Can't find it."

"If you want to build a building without the main beam, isn't that a joke in your head?"

"Building? I don't think it's good to build a ten-story building."

A boss with a cap and a cigar spoke:

"Look at where we are now. There are no pillars in this narrow arch refuge area, which means that when we build a building, there will be no load-bearing structure above it."

"There are buildings built in accordance with the underground structure. What is the difference between the repaired building and the original department store?"

"The difference between the five and ten floors is there is no underground parking lot."

"Underground parking lots can't be repaired. They can be repaired on the ground."

The young man on Ye Qing's left hand joked:

"The parking lot on the ground is fresh, and a layer of gold shops are completely cut, leaving customers to park."

"Or you can cut all the load-bearing walls and re-plan the load-bearing area."

"General Liu, shall we withdraw and let you come?"

"As long as you can cut and replace the load-bearing walls, you can plan as you want for a ten-story building."

"The concrete under the foot is also completely cut."

The cap is in an obviously harmful position to the person:

"If you cut all the concrete below, you can pile the building below to ensure you can make a big profit."

"Ha ... ha ... good idea, I will ask if the umbrella companies if they want to work with us. They are best at underground civil construction."

The relatively young man said, waving his hand to the engineer to leave with him.

"I flash, too."

The man in the cap followed:

"Everyone has to look at this piece of land and quickly start, our Hailong company is still honestly going back to build a community."

Several of the most powerful predators left, and the rest of the bosses, who were not too big, got up one by one and returned to the surface according to the path on the structure map.

They don't know how to be good, GM, they really want to send a dragon knife, but need a 60-level wizard to equip.

More than half of the people went and there were still some leaders who held the electronic version of the fascinating research of the structure of the site.

They are not only looking at the electronic drawings but also accompanying the staff, holding the drawing board and writing and drawing on them with pencils.

Ye Qing is also studying, just to be more casual, the Master Craftsman with a sci-fi instrument in his hand aiming at the surrounding walls and making a crisp sound of.

"Clicks ... clicks ...".

I took a look at the drawing board and found they were doing the load-bearing structure of the civil air defense project.

Bite the pencil, scratch your head, rub your thighs and lick your lips.

Occasionally, the surprise expression was smashed, and then the expression turned into doubt, then confused, and then disappointed.

These people have played a more focused role than the college entrance examination in the face of huge interests.

"Clicks ... clicks ..."

The crisp knocking sound continued, and the structural engineer who tormented the straw paper into pieces was standing up and shouted with anger:

"There is no end, not a hardness tester. What equipment is there?"

"Good boy!"

The Master Craftsman looked at the instrument in his hand and the instrument in the engineer's hand.

He looked at the engineer again and said:

"If I have a hardness tester, then what you have in your hand is a compass for pupils."

"For a long time, nothing has been figured out!"

"You..."

The engineer rose red.

"Okay!"

Ye Qing waved his hand and motioned that he would stop hitting again:

"Let's go up too."

On the ground, Ye Qing found the bosses had not left but surrounded by a pile of complaints.

There is still one person standing in the circle.

Ye Qing thought that he was the owner of Xinghe Construction.

“Secretary.”

Someone in the crowd complained:

"At most, we can only build ten-story buildings on them. What's the use of taking over the development?"

“Secretary, do you want to give more discounts? For example, exempt business tax, urban construction maintenance tax, land value-added tax?”

"Ladies and gentlemen."

Le Zhengdong signaled everyone to be quiet:

"Our URA has given the biggest preferential project. I believe you can design the most reasonable building according to the structural plan."

"Wisdom is endless, and civil defense work is not easy to change. We can use our brains in the superstructure."

This group of bosses, it is very vague to show you continue to pull expressions.

Le personally came over, there is no way, in the national health and civilized 's selection section, you can't always let the prime location of the be as old as the unfinished building.

He wanted to continue to persuade and advise several bosses inside to win the land.

For example, after taking the land, you can give certain discounts on other projects that they develop later.

Then Le Zhengdong saw Ye Qing.

Ye Qing's Monster Heavy Industry has a big name, and now there is no one in Zhongyun City do not know it.

At this time Ye Qing was on the phone, and Le Zhengdong planned to wait for him to finish the call and greet him after that.

Waiting Ye Qing, the director Le Zhengdong feels something is wrong.

What...?

He faintly heard, Ye Qing said on the phone, who is going to register a construction company?

What does he do with his registered construction company?

The Hongtou Zhongyun Heavy Industries, this quarter to pay the amount of corporate tax, almost took out the eyes of the two mayors.

If there are ten high-tech industrial companies like Big Beast Heavy Industries in Zhongyun, their waistlines can stand up to the sky.

It's not necessary for a construction company like Big Beast Heavy Industries to get involved in real estate.

Real estate?

Standing on this piece of land to be developed, Le Zhengdong, suddenly made a splash.

I don't know why the little old man next to Ye Qing let Le Zhengdong have a very anxious feeling.

The little old man looked at the underground passage from time to time.

He looks at the passage, and hides the expression of the civil defense project at the foot like the Olympic champion, watching a 1 + 1 math problem.

In his eyes, it is no longer the confidence of winning the game, and it is completely ignored.

Will it...

Le Zhengdong feels that the preferential projects taken by the Urban Construction Bureau are not perfect enough?

For example, if you exceed a certain number of floors, you will not be exempt from deed tax and property tax.

There should be no such thing as he worried, and Le Zhengdong's mind turned around and felt that he might be a bit worried.

[Chapter 263: Poor Urban Construction Bureau](#)

When Ye Qing speak on the phone, the last wave of bosses also came up.

Judging from their faces, we know nothing is too good to be done.

Capitalists are profit-seeking, and there are no people who do business at the loss.

They analyzed it, even if it was calculated according to the most expensive commercial real estate in Zhongyun City and only built a 10-story building, the investment would not be able to pay back the capital.

Moreover, there is no underground parking lot and it is impossible to sell at the expected price.

"Lee Director, our Hailong company is in charge of the second phase of Jinxiu Lidu. We are very optimistic about this land, but the company's funds have been invested in the second phase of construction, we are really powerless."

"We will not be able to raise these funds at the moment, and the land and development costs will be more than three billion. Since our company was last planted in the Long County district, it still can't climb."

"We have to go back and discuss and use a computer to do model analysis."

Since the Urban Construction Bureau has no way to give more preferential policies, these bosses do not need to continue to consume, and they are euphemistically looking for an excuse to leave.

They think the city construction bureau is too stingy and that college students can start a business and build a company to avoid three years of taxation.

Every place has a variety of tax incentives to attract investment, and then pick a few from it, they will definitely consider it.

As the crowd dissipated, Ye Qing also went to the director Le Zhengdong.

"Le Secretary!"

Ye Qing smiled and reached out and said hello to him.

"Mr. Ye."

Le Zhengdong looked at the people around him and said hello to each other.

Some smiles responded.

"Why, Ye Qing is also interested in this land?"

"Some interests, we are heavy, we have been missing our headquarters building. So, let me see if I can build a building here."

"That..."

Le Zhengdong has no reason to be nervous.

Several powerful real estate developers have gone.

Are they not even optimistic about this land?

"no problem."

Le Zhengdong was happy, and he thought that the land would have finally sold.

It stands to reason that Ye Qing represents the Monster Heavy Industry and said no problem.

That's a firm commitment. That is equal to the promise of nailing on the board.

For Monster Heavy Industries to build their own company building, the clouds from top to bottom will naturally strongly support because the Tiger has chosen the hard bone of the original department store.

Le Zhengdong and the Urban Construction Bureau should feast on Ye Qing to celebrate.

Originally, such a plan existed, but The Zhengdong inadvertently felt that Ye Qing was looking and seemed to have a strange pity in his own eyes.

Le Zhengdong always feels a little uneasy?

"To build a building is good, the Monster Heavy Industry is the industrial pillar of our Zhongyun."

Le Zhengdong is full of emotion.

Wait ...

Build a building?

Le Zhengdong seems to have caught the point.

Other bosses are planning to build buildings.

The word build is not suitable for use here.

"I don't know what kind of headquarters is planned to be built by Ye. We are here to calculate the water supply pipeline according to the area."

"Area..."

Ye Qing was a little embarrassed:

"Speaking of the area, you really have to prepare in advance."

"No need to use it, there are a lot of pipeline stocks in our Urban Construction Bureau warehouse."

"Well... the whole plot of land is 18,000 square meters. We expect to build a building covering an area of 50,000 square meters. There is a total of ninety-nine floors. The design of the building has not yet been finalized; however, the total floor area should be more than one hundred thousand square meters. "

At this time some few people have not yet gone, they stand next to the remaining director.

They feel they want to be close to Le Zhengdong.

Then, with Ye Qing as the radiation even within 10 meters of the scene, even the breathing sound stopped.

Ninety-nine stories?

A building with a total construction area of more than one hundred thousand square meters?

Next, to the near several bosses, the first reaction is that Ye Qing is crazy.

In the ninety-nine-story building, the height of the top story is estimated to be more than 400 meters.

The building with a height of more than 400 meters in China is also twenty-three.

"Ye Zong, you are really joking."

Le Zhengdong involuntarily rubbed his ears.

He tried to make his face shine with a smile:

"The highest building in Zhongyun City - Tianfeng Building is only eighty-eight"

"This civil air defense project can't be removed. It seems... there seems to be no way to build a very high building on it?"

"There is away?"

Ye Qing reveals an inscrutable smile:

"Le Secretary, I will take a step first. I will let the company lawyers negotiate the contract with you tomorrow."

When Ye Qing left, the director Le Zhengdong stood in the same place and was overwhelmed.

He should be happy to sell the land but the ninety-nine-story, over a one hundred thousand square meters how many happy he is?

For someone else, the director Le Zhengdong will certainly be angry about the other side.

But this is what Ye Qing said.

Le Zhengdong did not want to confess a tear of sympathy for the local tax and the Urban Construction Bureau.

There are still a lot of stocks of bragging pipes, and the results are less than one-third of the inventory according to the size of the people.

"Director Le, do you think he's crazy to build a ninety-nine-story building?"

A boss who wanted to butter him up came up with a pleasant smile on his face.

Le Zhengdong's expression was arrogant, his hands were holding his chest, and he looked at the strange boss with a serious look.

The face of the boss of the market, under the solemn eyes of Le Zhengdong, slowly fell into a state of helplessness and disappointment.

The next day.

All of Zhongyun's real estate and construction companies know something that makes them both funny and incredible.

The land that everyone does not look good, will be taken over by the Monster Heavy Industry to spend 1.5 billion Yuan to build the headquarters building of the Monster Heavy Factory!

"If the Monster Heavy Industry can work on it, build even a building that is more than eleven stories, I will be his skill."

The CEO of Hailong Construction Company confidently told his subordinates.

It is normal to have doubts.

Even the lawyers of the Monster Heavy Industries in the morning.

When they came to the Urban Construction Bureau and the owner of the Galaxy Construction Su Yuan and the Urban Construction Bureau to sign various contracts, Le Zhengdong still feels ridiculous.

After the contract was drafted, Ye Qing confirmed it after the review.

After the official signature, 1.5 billion Yuan, the top leader turned all out.

It is impossible for any accident to happen anymore.

Director Le Zhengdong was so refreshed that he asked his subordinates to calculate roughly how much money they had missed from Zhongyun Finance by the three preferential policies.

This calculation almost gave Le Zhengdong's blood pressure to the warning line.

Two billion!

Originally planned to attract those real estate developers with measures that seem to be very favorable.

As a result, the developer did not attract it, but it attracted a tiger.

But...

How does he build a ninety-nine-story building?

The contract has been signed, and Le Zhengdong can only wait and see how the giant beast will handle the hard bone.

Not only Le Zhengdong but also those large constructions and real estate companies have sent people there to wander around.

They want to secretly teach the master how to deal with the civil air defense project.

[Chapter 264: Giant God X-type dispatch](#)

The employees in the company heard they wanted to build an independent building.

It was in the golden area of Zhongyun City opposite.

Their excitement and emotions almost turned over the ceiling.

This feeling is like the huge gap between going to work by bus and driving to Mercedes-Benz.

An independent building in the center of the city. They don't have many faces when they go to and from work.

In order to build the building as soon as possible, Ye Qing's schoolmates and employees are also busy.

Civil Aviation, Quality Supervision Bureau, Civil Defense Office, Urban Construction Bureau, National Taxation and Taxation Bureau.

These departments that need to report and approve, are active in their presence and contribute their own efforts to build the building.

And Ye Qing, the one who signed the word on the contract, seems to have noticed there is a great burden on his shoulder.

Build a building that can represent the most advanced industrial technology of Monster Heavy Industry!

This building will become the face of the behemoth heavy work, it will become a business card.

So how to design the shape of this building becomes the most important issue.

Ye Qing does not intend to learn the landmark buildings of many cities.

He has a grand creative collection contest.

He invited famous architectural studios and designers from home and abroad to spend a few months to collect the design of the building.

Ye Qing is ready to do it himself.

There is no technical difference between the three-dimensional appearance of a screw part and the three-dimensional appearance of a building.

Of course, the appearance of the building can't be designed as desired.

High-rise buildings, especially more than twenty floors, in addition to the most basic mechanical structure, must also consider several very important issues.

Anti-seismic, fireproof, windproof.

Earthquake and fire prevention need not be considered too fine, but windproof work is the top priority.

Nature is both beautiful and cruel.

The ancient maritime sailed by the sails, and the larger ships can also be swept around the world by the sails.

A ninety-nine-story, more than the four hundred meters high building is equal to how much sail, and how much thrust will it generate?

With such a huge area, the wind impact to be withstood is naturally enormous.

Therefore, the most important consideration for high-rise buildings is the problem of resistance to horizontal forces.

For example, in the 101 building, the designer designed a super huge steel ball damper at the 88th to 92nd floors.

The damper has a weight of 660 tons and can sway by itself to offset the sway of the building.

There is also the central building of Shanghai City.

This is the world's second-tallest building, which many people have nicknamed it a tornado, and looks like a tornado.

The designer is so designed, in addition to good-looking, but also make full use of the appearance structure to reduce their own wind resistance.

The spirally rising structure of the building can well destroy the overall thrust of the strong wind and disperse the strong wind.

According to the requirements of earthquake resistance and wind resistance, the most reasonable solution is a cylinder or a positive multi-prism.

In fact, a closer look at the super high-rise buildings over 400 meters in the world, most of them are also this shape.

Unless...

The building's own material strength is very high, which can greatly increase the seismic and wind resistance ceiling.

Within a reasonable structure, Ye Qing hopes that his building will be unique, not only highlighting the industrial characteristics of the Monster Heavy Industry, but also the beauty.

There is also an underground structure.

In Ye Qing's expectation, this building has an amazing underground hidden space like an umbrella company.

These spaces, in addition, to be used to provide energy technology trees for the future, and to install independent energy systems for buildings, must also have comprehensive advanced industrial laboratories.

Like Tony's Iron Man Technology Lab, Bruce Wayne's Chariot Armor Research Lab.

This is not a boring idea that Ye Qing's blockbuster film has seen more.

But a private industrial laboratory that is placed in a hidden place that cannot be found by anyone with ulterior motives for protection and confidentiality.

The underground base of Longxitan is responsible for the core product base of Monster Heavy Industry.

The bottom of the building is its own private industrial base.

Thinking of this, Ye Qing opened the CAD software, starting from the bottom of the building and planning his own private industrial park.

When Ye Qing was concentrating on the building that he expected in his mind, time passed quietly.

When the clock reached two o'clock in the morning, the streets around Huanhai Avenue and Zhongyun City were all in the middle of a night called magic.

In Longxitan, there was a very strong engine roar.

Four Mechanical Colossus Type X are arranged in a straight line.

It's hard to see the bones but whoever wants to go, the hard bones under the ground.

Ye Qing is ready to send the Mechanical Colossus Type X to try.

Between the sky and the earth, it was covered with a cloud of black smoke.

Four Mechanical Colossus Type X open the top cockpit, mechanical arm, and frame, together with a total of eight high-power searchlights, heading for the Huanhai Avenue.

The Mechanical Colossus Type X is not a truck at all, it is a terrestrial steel behemoth.

Its height is 12 meters, three meters higher than the Caterpillar 797 mining car.

On Huanhai Avenue, the Mechanical Colossus Type X directly occupied nearly three lanes.

The four Mechanical Colossus Type X are driving together, and their shock power can't be described in words.

When the Mechanical Colossus Type X passed, the greening on both sides of the road was followed by shaking.

A Steyr heavy truck loaded with cargo travels from east to west towards Longxitan.

In the cab, a man with a cigarette in his mouth a shirtless upper body, and a body that shook with the music was unscrupulously sitting in the truck cabin and driving the heavy truck.

Because of the slope and distance problems, the driver found that when the lights were on, and the roots were not taken seriously, and they still occupied the lane.

The explosive music in the cabin covered the mechanical roar of the X-type colossus coming from far away.

In his opinion, it is essentially a private car.

Relying simply on the heavy truck under his seat and on 100 other private cars that must also give way to him.

"Beep ... toot ... toot ..."

When the Mechanical Colossus Type X climbed up the slope, the gossip searchlight was completely exposed to the driver.

For a while, the horn sound that came from the sky completely shocked him.

This fuck is a boat horn, clearly a whistling sound from a distant ocean.

The world's best music in the cab was completely silent.

The mad driver first responded to the ghosts.

How did the other's horn sound go up in the sky?

Then the Mechanical Colossus Type X shuts off the far-light with a click.

This driver has never had the habit of talking to people, and it is just like this.

He can see what is going on in front of him through the high beam of the heavy card.

It is a horrible and close steel behemoth to four floors and is close to three lanes even if it is attached to the side.

The ground seems to be shaking.

Without a visual inspection, he can also judge one of the wheels on the steel behemoth is taller than his front truck.

The heavy-duty truck driver almost cried out, and the one that he found was clearly a giant jack-up truck on the road.

The front of the car has a height of two meters and five meters.

The front of the truck is two meters wide and five meters high. How did it become an electric toy car for children under six years old when compared with the huge steel beast in front of him?

At the root, he doesn't know how to avoid the driver of the lantern.

He quickly recalled the knowledge he had learned in the driving school.

The lights will be driven to the side.

Then the two cars passed one beside the other without any damage and the truck driver followed serious dementia and looked directly into the left window.

In his vision, only the wheels.

And still half a wheel, he felt like sitting on a high-powered massage chair and even the eyelids were shaking.

The first Mechanical Colossus Type X passed by, the driver just wanted to smooth out the heart of his fierce beating, the second Mechanical Colossus Type X roared according to the whistle.

Then the third and fourth...

When the Mechanical Colossus Type X team disappeared completely in his sight, the driver turned pale and stopped.

Standing on the edge of the roadbed, he re-entered the smoke and smashed his face.

His mind is full of tires, he wants to be quiet!

That tire should be the largest tire in the world, with a diameter of 4:03 meters.

There is a single ten tons of weight, not counting the wheel hub...

What a hell, what the hell is it?

[Chapter 265: The bosses who are moving in the wind](#)

The four Mechanical Colossus Type X continue to move forward!

Rolling along Huanhai Avenue, the night is quiet.

Only from time to time the big cargo meets a truck.

These truck drivers, one by one, which no one even saw the driver driving these machines.

They called the police and said they saw several Transformers on the road.

The policeman who answered at the driver of the truck gasped said you should begin to say hello, and not maybe to be a bumblebee.

"You don't believe it?"

The driver yelled:

"It doesn't matter if you don't believe it. So, wait for them to break the ground and the street lights, the next day you will know the truth by reading the news."

Twenty minutes later, four Mechanical Colossus Type X, stopped by a police car on the main road around the sea and the city center.

The traffic police had come to see it with a half-hearted and unbelievable attitude.

As a result, he thought the train was driving in front of him.

Gossip... the headlights.

Eight headlights, the highest headlights, and street lights are in the same height.

Not to mention they have never seen or even heard of such things.

The two traffic policemen uneasily held a small sign to signal the vehicle in front of them to stop.

They are ready to run at any time, but the Mechanical Colossus Type X's driver is very polite to turn off the high beam and slow down.

Only by standing at the foot of the Mechanical Colossus Type X can you feel the incomparable shock of this pure steel industry.

Standing on the opposite side of the Mechanical Colossus Type X, you must look up and look at it to see its front position.

The front is an octagonal diamond-shaped head with the same shape as the Transformers.

The central black air intake grille is embedded in it.

The anti-collision steel beam below is like a steel wall hanging on it.

The two traffic policemen bravely came to the front of this steel behemoth.

As a result, they found that standing here can actually straighten the waist,.

Like walking down the underpass, from the chassis of this steel behemoth.

They couldn't see the drivers in the cockpit, and when the Master Craftsman walked down the stairs, they just woke up.

"You...what is this machine? Is there a document?"

"Engineering cars, documents are naturally there."

The Master Craftsman of the craft handed out two documents.

This is the special equipment inspection certificate of the Mechanical Colossus Type X and the operator's operation certificate.

Vehicles that can't be driven on the road do not need to apply for driving licenses and driving licenses, such as excavators.

There is no driver's license for this thing, only the operation certificate after passing the training.

Obviously, the Mechanical Colossus Type X is also in line with this, but it can't be on the road...

So, these four devices?

One of the two traffic policemen went around to see if there was any trace of damage on the road.

The other one accompanied by the laughter and asked the Master Craftsman.

Did the traffic report be prepared?

It's a joke. If the traffic police caught an excavator driving on the highway, they would not say a word about the ticket.

At present, this kind of steel behemoth, with his toes, knows its origins are inevitably different.

It is not allowed to be an unspeakable institution or a large-scale machine ordered by a multinational group from abroad.

Either way, it is not the responsibility of the two traffic police.

"I greet the Urban Construction Bureau. They want to send you to open for us the road. Our boss didn't let it."

Another traffic policeman walked more than a hundred meters along the back and found no signs of crushing the tarmac.

It is not difficult to understand this.

The larger the contact area between the tire and the ground, the smaller the pressure generated.

A fully loaded heavy-duty truck can easily pass hundreds of tons.

This steel behemoth certainly has more than one hundred tons, but its tire-to-road contact area is significantly larger than the two heavy-duty trucks.

The roads in Zhongyun City are built on the five-story highway in accordance with the standards of the expressway.

The quality of the road is, of course, better.

Traffic police are more worried that this kind of steel behemoth will crash street lights or traffic lights.

Because it is too big.

Hearing the Master Craftsman saying they had to open the city center road, the traffic policemen actually squeezed the sweat and offered to open the way in front of him.

The Mechanical Colossus Type X occupies two and a half lanes. From here to the city center six kilometers away, it is a two-way six-lane road. Most traffic lights are inverted L-shaped.

Fortunately, the traffic lights have a feature, and an intersection only occupies half of the lane.

The six-lane road has three lanes of red and green.

The Mechanical Mechanical Colossus Type X is careful naturally avoids the traffic lights.

The Master Craftsman sitting in Ye Qing's car rolled through this road several times.

Whether the Mechanical Colossus Type X can't pass, he would have known it early.

In fact, if there is no way to pass, usually extra-large machinery.

The ground commuting problem has been considered during construction.

If there is a viaduct to block the road, or the road width is not enough, the machinery can be split into several parts and transported to the construction site for assembly.

After four hours, the sky gradually brightened.

The traffic lights resumed work and pedestrians and vehicles filled the road again.

Then...

Some people found the ground in the downtown business district was demolished, and some changed differently.

First of all, the ground on the side was carefully cleaned up.

The citizens who got up early could still see the scenes of the young and beautiful girls wearing professional attire and carrying the nameplate of the behemoth heavy work, sweeping the floor with a broom.

The ground was cleaned, and the guys in the suits and the spirited face smashed the blocks from the truck and twisted them into a row.

Inside the construction wall, the four Mechanical Colossus Type X has been changed into a beautiful landscape.

The pedestrians passing by they stopped, they screamed excited and took photos of the four steel behemoths before them with their mobile phones.

The steel behemoth that the pedestrians took the photo is really very powerful and very powerful.

But the stalkers sent by the bosses of various construction companies recognize these guys.

It was because of recognition that they only blinked their eyes incredulously.

The Mechanical Colossus Type I have already set off a wave of equipment upgrades in the construction field of Zhongyun City.

But for those who buy the Mechanical Colossus Type I do not use the highest evaluation to describe this machine.

It is said that this is an epoch-making product, and it is said that the Mechanical Colossus Type I is a miracle in the field of mechanical engineering.

Even if it is a heavy animal, it is difficult to break through the peak of the Mechanical Colossus Type I.

Can it be much more powerful than the Mechanical Colossus Type I, an even more powerful mechanical giant, what is the situation?

After receiving a shocking call from the stalkers, the bosses all came one by one.

They even ran to the coffee shop on the 13th floor of the Skyhawk Building.

One person had a private room and looked at the Mechanical Colossus Type X outside the glass.

The gaze, the Victoria model came.

The bosses waited until the construction wall was installed, and even the lunch was a weekday.

They didn't want to touch the Western-style meals.

After eating the lunch, the gate site of the construction wall has been opened, and four tankers have slowly arrived.

The Mechanical Colossus Type X began to add diesel.

Several young people who changed their overalls, holding the structural drawings of the civil air defense project, measuring tape and white paint, drew a white line on the ground.

[Chapter 266 : Concrete Waves](#)

Compared with those bosses, Ye Qing is much quiet than the bosses, who look forward to the work of the Mechanical Colossus Type X.

One and a half billion Yuan of land money drained all the balance of the Monster Heavy Industries account.

Originally, looking at a sum of tens of millions of sums of money transferred into the account every day, letting the numbers jump, and Ye Qing felt that he was not excited.

Now, Ye Qing examines the balance of online banking business, it is multiplying in multiples, without forgetting how happy his heart is.

The only drawback is that money comes faster and spends more quickly.

The secret building at the bottom of the building was also been planned.

It can't be said that Ye Qing's luck is good.

All skyscrapers must be built with civil air defense works and refuge floors.

This is not the case for the Chinese family, as is the case in most countries.

It is just the civil air defense project has been built into an underground garage to be easy for the public to ignore.

This kind of flat-dwelling building is standard in almost all buildings.

The Monster Heavy Industrial Building, of course, should also have had a standard parking underground garage.

Ye Qing wants to transform the civil air defense project into a parking lot and will also use the civil air defense project as a cover shield to carry out secret construction underneath and build an underground industrial zone.

If there is no such thing as the civil defense project to cover it, and he wants to build the underground industrial area without knowing it by others, it would be a lot of trouble for Ye Qing.

With it, Ye Qing naturally has a set of sound plans to isolate the sights of irrelevant people and the perception of a large wave of supervision.

On the other side of the Longxitan underground base, the metal that was smelted was used to make the huge non-standard steel needed for the bottom of the building.

In line with the best principles to be built, the Masters Metal Experts have deliberately added a certain amount of titanium and zinc to the steel of the building to make the strength and toughness of these steels even higher, and also have high corrosion resistance.

On the other side of the company, they are also busy working around the building.

A new construction company has been registered, it is can register well but after all, it is an empty shell.

A ninety-nine-stories skyscraper is even more unlikely to rely only on monsters to fight.

The non-load-bearing structure of the building will inevitably be handed over to the construction team.

Ye Qing also has a qualified construction company candidate.

Liang Wenjing's Tianhui Construction Company.

Liang Wenjing is a cousin who is going around.

She is also the last partner of Ye Qing.

She was responsible for the construction of the old factory before, and the project acceptance was impeccable in terms of quality and duration.

Tianhui Construction Company has first-class construction qualification, and it is naturally no problem to participate in the construction of the building.

Perhaps compared with those established construction companies, Liang Wenjing led the construction team without any advantage.

However, Liang Wenjing's sense of responsibility is a construction company with very old qualifications to be incomparably huge.

More importantly, the load-bearing structure of the building will be completed by the monsters.

After finishing these trivial things, Ye Qing received a call from the Master Craftsman in the office.

The boundary line of the civil air defense project has been marked on the ground with white paint.

The four Mechanical Colossus Type X fuel filling is completed and can be constructed at any time.

Ye Qing nodded, indicating they could start.

Boom ~ bang ~ bang ~ bang ~

A giant laborer, two metal experts and a master of precision masters simultaneously press the ignition switch of the Mechanical Colossus Type X diesel generator set.

The noisy traffic and the crowd seemed to be quiet.

There was a dull roar in the sky, and after the four Mechanical Colossus Type X heat engines were over for ten minutes, the first time in front of the world, the huge robotic arms folded on both sides were displayed.

On both sides of the Mechanical Colossus Type X, the silver-white mechanical arms that are curled together are slowly raised and the cold steel with the sound of the mechanical structure gradually becomes full of majesty and full of strength.

Eight sets of black alloy buckets that seemed to be prepared for Optimums Prime were locked on the Mechanical Colossus Type X arm.

Just like pulling out several swords from the back of the sword box and replacing the operation tool of Mechanical Colossus Type X, it also has the courage of the top swordsman.

In the roar, the four Mechanical Colossus Type X in a row with incomparable strength cut into the hard-concrete layer below with eight buckets connected in a straight line.

The bosses hiding in the coffee shop of the Skyhawk Building almost turned their eyes.

What did they see?

They saw the dark and sharp buckets immersed in concrete one meter deep, which was easier than entering the soil.

Buzz ...

The four Mechanical Colossus Type X started to move with a momentum of nowhere.

The concrete floor breaks quickly and the waves undulate with the buckets.

Someone's coffee cup slipped out of his hand and the coffee splashed unconsciously on him without noticing.

The land below their horizons has a total area of 18,000 square meters, a length of 130 meters and a width of 139 meters.

The four steel behemoths below have hard breath, and the concrete floor is plowed from south to north.

When the Mechanical Colossus Type X stopped, the land had been neatly cut off a layer of concrete 40 meters wide and one meter deep.

Adjusting the posture, the Mechanical Colossus Type X came to both sides and continued the same plowing operation.

The lively crowds who walked on the sidewalk watched across the construction wall stayed.

What happened inside?

Why did the four steel behemoths walk from south to north, and countless pieces of broken concrete formed a high wave that was constantly rolling?

Concrete is wavy, which is a scene they have never seen in their lifetime.

There are a few round trips a few times during 40 minutes, and the concrete of 18,000 square meters there is no skin...

"Doesn't that keep people alive?"

One of the bosses hid his face in pain and shouted:

"Why do we employ multiple excavators and need to work for a few days, which can be finished in half an hour by such a super-mechanical giant?"

With the help of Mechanical Colossus Type X bucket made of super-hard alloy, the edge is as sharp as a knife.

The concrete pieces were lowered on both sides.

The Mechanical Colossus Type X switching tool again, using the digging bucket, dug the concrete outside the white paint line of the civil defense project.

When the bucket is emptied, there are 70 tons of harvest.

As usual, the excavated concrete is piled up in open space.

When the construction wall was installed, the masters have reserved space for building waste.

In the evening, the construction waste transportation company assisted by the Urban Construction Bureau will enter the scene and drag these things away.

The four Mechanical Colossus Type X are distributed at the four corners, and one bucket goes down.

The soil around the underground civil defense project will be missing.

These drivers seem to have magical powers: the buckets fly with more restrained movements and postures.

These drivers can also stack the ground of a shovel on both sides to have in the end a pile is as clean as tofu.

In the evening, the construction site was full of concrete and mud, higher than the construction wall.

They are really 10,000 wild buffalo rushing past, the morning civil air defense project was still hidden in the ground.

Now the four Mechanical Colossus Type X have dug up all the concrete around the civil air defense project.

Except for the bottom, leaving it solitary and exposed to the outside world.

And those bosses, except for a few people have to leave, the rest is still in the coffee shop.

If they are thundered, they are eager to know what to do next.

The civil air defense project has been dug up.

Can't you remove it with a fundamentally impossible means?

[Chapter 267: Learning under the Ground](#)

That night, the huge dump truck of Monster Heavy Factory entered the construction site.

These are the first four of eight dump trucks heavy vehicles, with heightened fences, which can easily pull up 50 tons.

When the first dump truck drove in, the driver jumped out of it, kicked the feet against the wheels, stretched the lower bones, and then waved to the vehicles to line up afterward:

"Six Inches, come, accompany me to buy a pack of cigarettes."

It takes more than ten minutes to fill up a car with dirt.

This time, you can buy a pack of cigarettes, get one for Meizhi, and come back just in time to drive the truck away.

"Dang ... dang ..."

A heavy object slammed in a loud noise the carriage.

When the driver turned back, he found his dump truck had been covered with a full body of mud.

Looking out of his field of vision, a huge steel arm that seems to protrude from the ground is lying in the sky.

The driver was full of dementia and just wanted to run over to see the deep pit.

When there was a steel behemoth hidden, a high-pitched trumpet came.

"Hey... Don't rest, drive the truck away."

The second dumper driver learned fine and he did not plan to get off.

But before he got the car steady, the frame followed and sank and made a clatter.

"Go, change one."

The driver drove away with a blank face.

The third one was more skilled.

When he drove slowly past, he heard a click and ran off with one foot of the accelerator.

The mighty dump truck fleet, loaded in less than half an hour, carried away 200 tons of dirt and concrete fragments.

When the drivers pulled these things into the sand-filling pits, they always thought that the Big Mac machinery must be equipped with a 50-ton bucket, otherwise, how could they fill their buckets almost equally?

The dump trucks carried the ground in both directions until the third trip.

From the northern breach, a convoy arrived the rumbling.

Each Steyr heavy truck carries a large I-shaped alloy chassis.

These frames are huge, each with a height of 22 meters.

Although they are tall, they are placed horizontally in the truck, dragging the long section outside, without having to worry about paying attention to the inconvenience caused by the serious elevation.

Now inside the cafe of the Skyhawk Building.

The builders and development bosses did not spend a lot of money to pack the night market.

After nine o'clock, the business stopped and especially left two waiters on the night shift, and by the window of the row of the private room, the young stalker was clear.

They set up cameras, and the paparazzi stared at the construction site below.

On the construction site, four Mechanical Colossus Type X are still excavating.

They followed the long, go to the underground passage inside the civil air defense project and re-excavated an open-air passage.

Under the incandescent lighting on the construction site, the above people can clearly see the giant god X drilled into the bottom of the civil air defense project, and the crab began to hollow out the bottom soil.

"What do they want to do?"

Several stalkers gathered together, playing cards while paying attention to the following situation.

"The soil below is already a bearing layer, and if it is not supported to a certain extent, the civil air defense project will surely collapse."

"I guess they are going to hollow out the bottom, then support it with the frame, and then directly underneath the construction."

This speculation led to another person agreeing that just a lot of carats came over the steel frame, and most of them planned to support the civil air defense project underneath.

"Funny yet is this?"

A man glanced smoothly and laughed:

"It's also a loss you can think of, support in the ground, and hold the civil air defense project."

"Building a building, especially a skyscraper. You only look at the appearance, and it seems to be a lot higher than other buildings. In fact, the knowledge below the ground is a big one."

"What knowledge do you have?"

His near friend asked humbly.

"Blue Brother, we are the most knowledgeable here. You can tell us something about it."

Young people always have vanity, and they are shot by people. This man named Blue Brother proudly shows off his knowledge:

"Do you know the Shanghai Center Building?"

Several players nodded like chickens pecking rice.

Shanghai Center Building is the second tallest skyscraper in the world.

Which one does not know its name?

"Do you know how many piles of the center building have been drilled more than one meter in diameter?"

"995 roots hit the ground eighty-six meters deep, then the underground continuous wall of fifty meters deep."

"The continuous wall is not allowed. This is equivalent to constructing a layer of the wall at the bottom of the ground. Then the workers dug down in the continuous wall, dig a layer and pour a layer of structure..."

"The center building has five underground structures, and the concrete is directly used below. Pouring the floor, it is six meters thick."

"A pile foundation of 86 meters deep, a continuous wall of 50 meters deep, and a floor of six meters thick."

The blue brother pointed at the civil air defense project outside the window, said with a smile:

"They are not able to support the civil air defense project, and at the beginning of the design, the civil air defense, the project was not designed to be cover by the skyscrapers at all."

"So, no matter how to change, even if the pile foundation is used to penetrate the civil air defense project, the civil air defense project can't connect with the upper part of the building at all."

"Unless there is a mountain god to help, the civil air defense project can be removed before construction can be carried out."

A few people next to him laughed and started to discuss how to find the mountain god to help.

Below the construction site, the Mechanical Colossus Type X will draw six square meters and 22 meters deep soil, it will pick up a thick-walled I-shaped alloy support frame of the same area, placed underneath.

It seems that he really wants to support the civil air defense project, but only support is useless.

This problem, Ye Qing naturally knows, so Ye Qing decided to move the civil air defense project.

Move a steel-concrete concrete building with a weight of 250,000 tons and an area of 15,000 square meters.

This is simply an idiotic dream, like to marry a daughter-in-law.

Although building translation technology exists, it requires ample space and a certain weight.

The most important building translation in China is a little more than 10,000 tons, which also creates the most comprehensive difficulty.

250,000 tons?

Around the original department store, there were no 50,000 square meters of open space to move it.

It seems impossible at all, but Ye Qing has sufficient confidence.

When the weather was bright, the team of Monster Heavy Industry once again carried a batch of alloy sheets.

Two Mechanical Colossus Type I, which had been specially modified to convert the left mechanical arm into a welded arm, also came to the scene.

These highly rust-resistant alloy sheets will be welded into one piece to reinforce the surrounding of the foundation pit to prevent collapse and water seepage.

Today Ye Qing did not go to the company, drove the Lagonda on the high speed early in the morning.

The appearance of the building, Ye Qing, has been designed.

What is needed now is to ask a top architectural design company to design the building structure inside the building.

Building a building, Ye Qing can't help too much internal structure in addition to designing the appearance according to his preferences.

A skyscraper, the internal building structure, involves too much expertise.

For example, air conditioning systems, drainage systems, power systems, elevator layouts, and space utilization.

The destination is in the cosmopolitan city of Shanghai, where the famous chronicle studio is located.

Xiao Jun, the chief designer of the Chronicle Studio, is more famous.

Coincidentally, he and Ye Qing are old acquaintances.

He and Ye Qing met at Shanghai's technology exhibition.

Because of his busy schedule, Ye Qing was on the phone yesterday and asked if he could design the internal structure of the building.

Xiao Jun did not ask the price and agreed.

[Chapter 268: The building still has a wind tunnel.](#)

The Chronicle Studio has designed seven skyscrapers, three of which are abroad.

In the studio, the chief designer of light, Xiao Jun, brought out four people who can stand on their own.

Ye Qing navigated to Zhang Jiang High-tech Park in Pudong New Area.

After two rounds, he saw a big magic cube-like geometric building standing on a side green belt.

This is the office building of the Chronicle Studio. There are fifty-four pieces in total. Each square is independent of each other.

It is said that it took only two days to build this building.

Ye Qing stepped into the magical science fiction building, waiting Xiao Jun.

The chief designer at the side got up from the sofa and comes over to give Ye Qing a big hug.

"Ha ... ha ... Mr. Ye, the reputation of your Monster Heavy Industry, even our architectural design industry, which is in the industry, it is grateful."

The designer Xiao Jun patted Ye Qing's arm and said warmly:

"Now in the building area, we are discussing the Mechanical Colossus Type I of your company."

"Mr. Xiao is a permanent international honorary member of the Royal Institute of Architects and he is more famous than us."

"They are all empty-headed titles, and there is no value for Mr. Ye's Mechanical Colossus Type I type."

The designer Xiao Jun led Ye Qing upstairs and told to the secretary, so doesn't let others disturb them during this period.

Xiao Jun's office is very characteristic.

The interior decoration is full of ancient elements and even the office computer is disguised as a bark board.

"General Ye, I heard you want to build a ninety-nine-story skyscraper?"

Xiao Jun took out two pottery cups with the same artifacts from the obsidian hollowed out shelves.

While admiring the tea, he said:

"A skyscraper over 400 meters high will cost more than 10 billion yuan. Mr. Ye is a big man."

"It's all face engineering."

Ye Qing smiled and took the USB flash drive out of the bag and put it on his desk:

"This is the appearance of the building I designed myself. You give it a look, there is no shortage of places."

Xiao Jun used a computer to open the 3D model in the USB disk for a moment, then clicked on the desk.

A pure black curtain wall slowly droops down the back-glass window, losing the natural light.

The office suddenly darkened, and then on the east side of the ceiling, turn on two projectors.

Two projectors cast the picture onto the opposite glass wall, even without 3D glasses, the picture is very stereoscopic.

It was a skyscraper that stood on the horizon and seemed to pierce the sky.

This is a four-sided multilateral diamond-shaped building.

From top to bottom, giving people the first feeling is slim, the second feeling is slender.

Many commercial buildings like to build large, high bases on the ground floor to serve as commercial areas.

No, Xiao Jun admired it. Ye Qing wants to build a building in the most commercially valuable center of Zhongyun City but will not build a commercial area.

Also, admire the shape, and the building has a total of forty-six sections, each section is a four-sided diamond, the top of the building is composed of three diamonds.

So, no matter which angle you appreciate, you will feel the building is facing you.

Each quadrilateral diamond is fitted with a silver-white metal frame.

These silver-white metal frames are both aesthetically pleasing and function as a fixed glass curtain wall.

From the perspective of the three-dimensional renderings, these silver-white metal frames ingeniously inlay the glass curtain wall, from a distance, like a slender diamond-shaped sapphire, inlaid with an artistic and sci-fi alloy frames.

"There is a very smart design, the whole building is simple and there is nothing extra, there is no advertising curtain wall and no launch tower, just..."

Xiao Jun rotated the building and looked around carefully through the control panel of the Rotary Building, not sure about the road.

"These silver-white hollow metal strips are very eye-catching, but the size is so huge, can it be processed?"

"no problem."

"I dare say that if you rush to this shape, you will get the Luban Award."

Xiao Jun said nothing more, the more unique the shape the more difficult the construction, especially the difficulty of construction of main and secondary sorghum.

In the design of skyscrapers, it is difficult to be ingenious, mainly the appearance of the building designed by the designer and must compromise to the wind speed.

The design is designed to be essentially a mold, just like the shape of the plane, a third generation and fourth generation machine.

Because it is most suitable for aerodynamic shape, it will be over and over.

The wind blows across the surface of the building and creates loads, which then create vortex shedding on both sides of the building.

Looking at Xiao Jun's professional eyes, the shape of the building is very bold.

It is theoretically feasible to use a polygonal design to break the dimples.

However, the dampers of such buildings will be redesigned, and a 1:500 building model will be produced and sent to the building wind tunnel laboratory to simulate the actual building winds.

"Wind tunnel experiment can be done in Shanghai, just three days after building your model. There is a 278-meter tall building to blow the wind tunnel. I let the studio work overtime, make your building model, and send it into the wind tunnel."

Xiao Jun drank a sip of tea:

"Only by taking the detailed parameters, our studio can start the design of the building damper. Before that, we can first design the drainage system and air conditioning system."

"I recommend the superconducting water cycle air conditioner that you can force, which is the kind of last time at the exhibition. It saves a lot more power than similar products."

Ye Qing nodded, and the cooling effect of those air conditioners also left a deep impression on him.

Although a scandal causes the stent to fall off due to resonance, it is not a defect of the product itself, it is a coincidence.

This coincidence on the metal is impossible to exist here in Ye Qing.

There are only three-dimensional drawings in the USB disk, as well as the design of the private living area on the top floor of the building, and Ye Qing needs to reserve space for the installation of the building technology equipment.

The talks have been going on for two hours and then entering the most important moments.

Negotiate the price.

Design institutes or studios charge a fee based on the square meter.

According to the level and technical difficulty, the price difference per square meter is amazing.

The skyscraper is a technically difficult one.

The designer Xiao Jun walked back and forth for a long time with a cup of tea.

He wanted to open his mouth several times and was embarrassed to scratch his head.

"One hundred!"

Considering the end, Xiao Jun put down the teacup and explained to Ye Qing:

"This price includes a complete set of construction drawings, wind tunnel testing costs, and an unlimited number of free modifications."

The total building area of the Giant Animal Industrial Building is more than one hundred thousand square meters, according to the design cost of one hundred Yuan the square meter.

This price sounds terrible.

The design fee for a building can exceed 100 million Yuan which are much better than robbery.

This is the case, some design institutes are responsible for designing the terminal building and the high-speed rail station, and the price per square meter can reach 500 Yuan.

Coupled with the great reputation of Xiao Jun and Chronicle Studio, the design of a building's structure and construction plan, only 100 yuan per square meter has been quite good.

Moreover, he also sent a free building wind tunnel test.

"We wish us happy cooperation!"

Ye Qing reached out and said he accepted the price.

"The moment the building will be built, it is also the reputation of our chronicle studio and the moment of the next level."

After signing the contract, Xiao Jun looked very excited:

"Mr. Ye, only you are a heavy weapon, only have the ability to use high-corrosion and high-toughness alloy steel to build the building's support frame."

"Mr. Ye rest assured according to the steel parameters you provided and the design of the main beam. Even if the shape of the building is more daring, it will remain motionless."

[Chapter 269: Smoke and rain west pond.](#)

Based on the first principle of solidity, the Monster Industrial Building has designed a total of thirteen gigantic main girders.

Thirteen gigantic girders are fixed in the longitudinal direction of the building.

The rest of the girders are handed over to the chronicle room, and the structure is designed freely.

Xiao Jun's experience judges that the entire building uses only eight giant shaped main beams, which have been huge and the creation of thirteen is completely a waste of money.

Especially in the center of the gigantic girder, the steel is so thick that people can't help but want to burst the degree of vulgarity.

Xiao Jun resisted it and switched to the more elegant Ding Lou Shen to describe it.

This is why Xiao Jun can accept the main girder of the building is designed by the Monster Heavy Industry.

No industry in this year seeks merit but fault.

Another company came to Xiao Jun and the other side put forward the main girder Ye Qing design, Xiao Jun laughs three times and drive the other side out.

Are you kidding me? Ye Qing designs the main girder.

What quality problems will happen to the building in the next day? Who will carry the pot?

Xiao Jun certainly does not back, he let makes the main girder not designed by them.

However, the main girder design provided by Ye Qing.

Xiao Jun dare to pick up, even more, dare to add to the design drawings of the entire building.

In fact, there is no difficulty in designing the main girder.

The three points of strength, toughness and high-temperature resistance are up to standard.

It is not so much a professional in the field of construction, but rather a specialty in the metal field.

Because most of these parameters are supported by the steel bone inside the main girder.

If the main girder parameters of the building are scored and 60 points are qualified for construction, the Monster Heavy Industry will take 400 points directly.

Xiao Jun naturally dares to take over the design and the safety responsibility associated with it.

Xiao Jun thinks the Monster Heavy Industry has the money to burn, and the light is the center of the building, the gods can take 60 points.

However, Ye Qing believes the central giant girder is necessary, and it is the soul of the whole building.

Because that gigantic girder is the only way to connect the secret space at the bottom of the building.

In Ye Qing's vision, after the completion of the central giant main girder, there will be a high-speed elevator built by the Monster Heavy Industry.

The elevator exit is open in the private living area on the top floor, and the entrance does not require any smart electronics or other door locks.

For pure alloy steel elevator doors, mechanical keys, plus mechanical password switches.

After all, the most traditional, and often the most reliable.

After signing the contract, Ye Qing politely declined Xiao Jun's invitation to lunch.

Xiao Jun, who has no flaws except for some common artists is in the eyes of ordinary people because some are too extreme to pursue the quality of life.

If it wasn't for the appointment at noon, Ye Qing would definitely mix a Shanghai special meal here.

At the noon, Ye Qing had a cousin, Liang Wenjing she decided to cooperate in the construction of the Monster Industrial Building.

After seeing the time, he waited until he returned to Zhongyun.

It was too long to have a meal.

This meal was naturally Liang Wenjing's hospitality.

The sky grew gloomy before the car drove far.

It didn't rain for many days.

Ye Qing looked at the raining rhythm and immediately opened the skylight baffle, ready to come to the scene for a romantic rain.

The first drop of rain, dripping onto the windshield, Ye Qing suddenly remembered, Ye Qing forgot the name of Liang Wenjing's hotel...

Ye Qing had to call again, and the phone connected. Ye Qing didn't ask her where she left at noon.

Liang Wenjing told Ye Qing that she was in Jinxi at this time and could go to Zhongyun at about 12 o'clock.

Ye Qing, out of courtesy said that if she does not mind, it would be OK to move the luncheon to the dinner.

"I just took my bag. I came here with my radio colleagues to take a picture, and the car broke down and couldn't go back."

"We will go back soon, I will drive the Audi A4, very fast."

Ye Qing, saying that it rains this time, he will definitely drive to 12 o'clock to Zhongyun.

Just as he is not far from Jinxi in Shanghai, just eat and talk at Jinxi

Jinxi is an ancient town in the water town.

It is not far from Ye Qing, only 60 kilometers.

Wherever eating is eating, Zhongyun who has stayed for more than 20 years, naturally has no freshness in Jinxi, not to mention running there.

Set the navigation destination to Jinxi, Ye Qing turned to head toward Jinxi.

Heavy rain is picturesque.

Compared to Zhouzhuang and Wuzhen, these famous towns in the water town.

Jinxi, this place, the commercial taste is much smaller than them, unlike the people in Wuzhen and Zhouzhuang.

People who are not from Jiangnan Province rarely hear the name of Jinxi Town.

Jinxi is very large and has a long history. In addition to the small bridges and flowing waters, there are many historical and cultural features to retain.

If time is sufficient, it is a good choice to go to Jinxi.

You can take a few steps to the lotus pond in Jinxi's smoke and rain corridor.

Zhongyun City is making a food show of "Jiangnan Shangwei", and Taiwanese director Liu Yunqin will take a trip to be the host.

There are many lotuses in Jinxi Town, and there are many natural and water-related snacks.

Going around and filming the group to shoot the town snacks and soup dumplings, they came today, the result of the film team's Highlander somehow stopped working.

The repair shop said the gearbox was broken because it was the old Highlander.

They had no parts inventory in the town and had to send it from the outside.

The film crew has a total of three people, and the host is the host and the leader, the male camera and the driver, the female artist and the camera are lovers.

Once they can't walk, the two are happy to go with the New Year and leave to go boating.

Going out in the circle of friends made a dynamic, saying that Ye Qing a person fell to his hometown, Ye Qing did not see, her cousin Liang Wenjing heart soft, ran to take a trip home.

When Ye Qing navigated to Jinxi, the rain was still under, and there was only a small number of private cars parked in the parking lot, and they were also licensed by nearby cities.

After getting off the umbrella, Ye Qing's mood is getting better.

The commercial development of Jinxi is very low.

The shops on the roadside are not like the other famous water towns.

The boutiques are all aimed at the tourists.

It is impossible to start with light.

Next to the parking lot is a small river with blue waves, much fishing wooden boats are shaking the paddles.

The ears echoed the sounds of "Squeaky" and "Squeaky", and Ye Qing walked toward the distant promenade across the river.

Two girls with oil-paper umbrellas stood quietly in the rain curtain at the front end of the promenade.

Seeing Ye Qing slowly walked in, wearing a white long-sleeved cheongsam, and waved.

This time, Ye Qing seems to think he has become Xu Xian.

Standing on the edge of the gallery is the white lady on the edge of the broken bridge.

After entering, Ye Qing knows that this Ye Qing is the illusion of him.

This is not a broken bridge. Liang Wenjing around her is not like Xiaoqing at all. She is like...

Passerby!

"Brother Ye Qing!"

Liang Wenjing dressed a silver bell and laugh through the rain curtain:

"How come you ran to Jinxi. When you said you were coming, I also said you were bragging."

[Chapter 270 : Raf](#)

A few minutes before the meal, they all came to Jinxi, an ancient water town.

Packing a pontoon or painting a raft, swaying in a rain curtain, is naturally the best choice.

There are many such boats in the lotus pool opposite the promenade.

Ye Qing proposed to pack a boat and play with it.

Both Liang Wenqing and Doudou jumped into battle one after another and turned the canoe straight in the water.

Ye Qing also went up and tried it, so that the boat could be drawn straight, but it was not a turn.

Next to it is carved wooden stirrups manufactured by modern industrial technology and powered by electric propellers, which make the East and the West clear.

After paying the deposit and taking a map of the local attractions, Ye Qing turned the rudder and headed for the direction of Jinxi Ancient Town.

Sitting on the side of the bag, reaching into the rain curtain outside the painting, the little face is full of happiness and joy.

On both sides of the river is the repairing shore of the blue-gray rock.

From time to time, there is an arched stone bridge crosses both sides of the river.

"Ye Zong, I have studied the 3D drawings of the building you provided."

A professional dress Liang Wenjing sat in the bow, some not self-channel:

"To be honest, although our construction company has a type of building qualification, it can take over the tallest building, only 43 floors of high-rise residential buildings."

"Building a ninety-nine-story building, I can guarantee the construction in strict accordance with the construction drawings to ensure the quality. It is only the construction period, and I am afraid that our manpower will delay the construction period due to equipment restrictions..."

"The thirteen giant pile foundations you requested require a large-scale rotary excavator specially made in Germany, which takes one month and a half to arrive at Zhongyun Port..."

"The rest of the ordinary pile foundation, we can find equipment construction."

Ye Qing is ready to talk, and a group of gangs who are playing with water ran over, grabbed Ye Qing's arm, and eagerly tried:

"Ye Big Brother, you are going to talk about things, I'll drive a boat."

The boat speed is very slow, and the ship's side is also covered with very safe cushion rubber.

Ye Qing gave up the position and told Liang Wenjing:

"All pile foundations will be taken care of by us. You will be responsible for recruiting workers before the construction drawings come out."

"That....."

"Then there is no problem on our side."

Liang Wenjing rubbed the corner of her dress and said solemnly.

In Liang Wenjing's heart, the tension is far greater than the surprise.

"Do you have the technology to build a skyscraper?"

"Of course, yes!"

Huaxia has the largest skyscraper in the world, but any building in the construction of Monster Heavy Factory will encounter a variety of technical problems which have never been seen before.

These technical problems are almost entirely concentrated on the foundation.

Liang Wenjing heard the most dangerous one, at the time of Zhongyun International Port, when building the 88 floors Tianfeng Building.

The building was designed to dig up a 20-meter deep foundation pit and then began to excavate 600 piles with a rotary digging machine.

As a result, when the 530th pile was hit, there was a big accident.

Because of the two days of heavy rain, the bottom of the foundation pit became soft, and the pressure on the upper groundwater became smaller.

As a result, the groundwater rushed out to the surface.

As the groundwater gets bigger and bigger, the foundation pit becomes a vast ocean.

Hundreds of pile foundations underneath in the water, together with the reinforced slope around the entire pit, are at risk of collapse.

If it weren't for the workers to stop, the boss of the construction company that was responsible for the construction at that time would probably plunge into the ocean.

In the end, Huaxia Erjian, a high-speed railway in China, was built. A chief engineer with the title of academician of Huaxia Academy of Engineering took the equipment and took over the command to save the field.

He commanded two 66-meter concrete pump trucks, and directed the groundwater breaching point, pumping the quick-setting plugging material that was prepared from the chemical plant.

The cranes were on the sides of the foundation pit and were in the group to the rain-shield over the foundation pit.

Greenhouse membranes with leaky pipes reduce rainfall, and borrowed pumps are everywhere on the side of the foundation pit.

Finally, the groundwater breach was blocked and the water in the pit was pumped to the bottom.

The boss of the construction company was holding the trousers of the academician and screaming in the mud.

The tallest building is on the ground, and the most difficult foundation will be the responsibility of the Monster Heavy Factory.

The remaining thing is to construct according to the construction drawings.

It is nothing more than to measure and supervise whether it is in place.

There is not much difficulty in the construction technology of the superstructure of the building.

Even if there are difficulties, it is difficult to have enough funds.

Under the fund, Liang Wenjing's self-conscious sense of responsibility is also sufficient under the capital.

But she is used to the downturn of the construction industry in recent years.

Many construction companies are in a difficult situation because they can't get a job.

Ye Qing's billions of big orders gave Liang Wenjing a sigh.

This is not a question of whether the company can survive the difficult problem.

But whether her construction company can become a famous company and become a top opportunity for Zhongyun's top construction companies.

Even the company knows how to seize every opportunity around it.

The difference is only the pattern and the problem of the horizon.

Liang Wenjing asks the pattern and the vision, and the lack of opportunity is only an opportunity.

Now the opportunity is coming.

Happy, only after the completion of the project, after acceptance.

The building was not built in a day, and Liang Wenjing could not relax.

This is the best chance for her to carry forward her family business and she must go all out.

The most difficult ground-based barriers have been smoothed out, and the most rigorous and scientific construction schemes must be used to demand.

If you are short of technology, you can go to school. If you don't have the equipment, you can buy it or rent it.

"I wish happy cooperation."

On the painting, Ye Qing reached out.

"Thanks to Mr. Ye, we have good cooperation."

Liang Wenjing solemnly handed out his hands.

"When I return to Zhongyun City, we are asking lawyers from both sides to draw up a cooperation plan."

Ye Qing patted Liang Wenjing on the shoulder and smiled:

"There is a bold start to recruit people. Now the construction industry is relatively weak, whether it is people or equipment. They are better to find than in previous years."

Liang Wenjing nodded hard.

The design was solved, and the construction team solved it.

Holding the umbrella to the bow to enjoy the scenery, Ye Qing's mood became very good, especially during this time in the quiet water town.

Ye Qing holds an umbrella and standing upright.

On the side, he was responsible for driving the paintings and quietly gave her cousin a small mouth.

"Cooperation reached?"

asked in a whisper in Liang Wenjing's ear.

"Hmmm..."

Liang Wenjing clung to her arms and nodded hard:

"Scorpio, I feel like dreaming now."

"The ninety-nine-story building, how tall is it, how much does it cost?"

Looking around at the back of Ye Qing, she felt the building was taller than the back of Ye Qing.

"More than 10 billion, the most expensive building project in the history of Zhongyun."

Liang Wenjing shook his arms as a ship's bow:

"I will talk to my sister directly in the future, and my sister will buy it for you."

She didn't know what to say and was looking at the bow most of the time.
