

## **M Factory 291**

### [Chapter 291 :replacement of the logo.](#)

Stepping on the steps, Ye Qing decided to come to Hermes first.

There are a lot of people in Hang Lung Plaza, but there are not many people who really have the courage to walk into those brand stores.

Especially those young men and women, they come here to feel the breath, take pictures, record a small video.

There were only four customers in Hermès when Ye Qing walked in. The two service staff met there was immediately come to him with a smile.

"I just want to go shopping." Ye Qing indicated that they didn't have to be around.

Ye Qing came several times before at Hermes, but it's all in Zhongyun's shop. Unlike the other four carefully selected customers, Ye Qing's visit to Hermes is just a trip to the flea market.

The characteristic of this mentality is it does not ask about the price.

For example, Ye Qing and Bai Dour discussed that this new windbreaker wasn't bad this year. Ye Qing will try it on and asked the waiter to help him to hold up his cell phone to shoot it with his mobile phone.

The waiter just wanted to introduce this windbreaker. Which designer did it come from, what kind of internal meaning it has, and how much it costs? He was interrupted by Ye Qing's waved.

"Put it over first." Ye Qing is very casual to continue to see the next one.

The service provided by the waiter is impeccable, but with the increasing number of Ye Qing's tests. He was transferred by Ye Qing to the leather bag area to ask which ones are available, without waiting for customization.

The waiter's heart is faint, and he has some bad feelings.

This young man with good looks will not...

'Wouldn't he want to pretend to be a top-level second generation in front of his girlfriend?'

When he helped Ye Qing to hold the mobile phone, he could just see the other person talking on the other side.

The look and temperament of Bai Dour make even the women have a slight illusion of electricity to be overpowered.

A beautiful face, no powder, simple but difficult to hide the national color. A pair of eyes covered with water vapor, transmitting a touch of affection. Ye Qing let the waiter holding the mobile phone almost lost his thoughts back about the beautiful years of his first love.

At present, In front of the waiter, this little brother will finish a big circle. And at the end of the circle, will he say goodbye?

Hermes is the aristocrat in the bag. This young brother took several leather bags of men and women to compete in his hands. From the beginning to the end, his eyes did not see the price nameplate on the exquisite wooden frame.

Ye Qing thinks which bag is good, and he will give it to the waiter to put it there.

After having had it, the waiter really wants to come to work. He can only be brave to accompany Ye Qing by a smile and said welcome to come back next time.

But this little brother can install one over the video. When he goes back, he will buy some fine imitations of the brand according to the style.

Whether it's because he can't bear this innocent girl to be cheated. Or because he does not want the girl to wait for half a day in case of nothing.

As long as the little brother finally said goodbye, the waiter would pretend to be very surprised, loud, reminding the pure girl opposite, your boyfriend would not buy it!

Hermes leather bags are expensive, especially platinum bags, the price is usually more than 100,000 Yuan.

Ye Qing took a walk around the corner and said that the price of clothing and bags that had been placed there had already exceeded two million.

"Well..." Ye Qing, with his chin, thought.

The two waiters who waited beside him looked at each other and thought that the moment of the performance was coming.

If the younger brother buys a piece of clothing, they can increase the performance without being too small. If he can buy a leather bag, he can send a red envelope to celebrate in the group.

If he doesn't buy anything, then they must be kindly reminded 0...

"I just picked all up and put it all up."

"What do you say about Mr.?" The two waiters did not believe in their hearts.

A black card was turned over at the fingertips by Ye Qing, and Ye Qing looked at them strangely.

The two waiters nodded like a chicken, and as a luxury waiter, they trained a lot of knowledge about cards at the beginning of their employment.

Their eyes were unquestionably sharp. So after Ye Qing took out the card used for checkout, even the very temperate store manager personally came to the reception gently helping Ye Qing to measure the waist and punch the belt.

Before leaving, Ye Qing was in a mess. When he left, he was a mess of the wind.

All the clerks have come in person. There were so many Hermes handbags on the floor. They were full of two hands the clerks were full of hard work.

"After that." Ye Qing walked toward another luxury brand shop.

A passing girl saw this scene and felt the heart was hit by lightning.

Compared with Ye Qing, the treatment of delicate masters is much worse.

The Staffin Group in Swiss is a well-known manufacturer of watch parts.

Whether it's cheap enough to make a Swatch quartz watch, or a few times more expensive than gold. Patek Philippe can find the watch parts produced by the Staffin Group.

This group, which is quite accomplished on precision parts, has been targeting China in recent years.

They invested in a new shopping mall with luxury watches and high-end jewelry brands as a selling point on Huaihai Road.

In addition to inviting Switzerland's famous watch and jewelry brand, the Staffing Group has also built the largest luxury watch club in China. Preparing to collect and maintain the watch, and attract the attention of top locals rich.

There are shopping centers, and naturally, there are also representative signs.

The most famous sign is the Wall Street copper cow, and the two cow eggs are brightly touched.

On the Plaza 66, there are also several floors of lv bags.

Xiao Jun originally designed a windmill in the center of the square on the first floor.

The shape of the windmill is very simple, but it's not tall. It's about three meters. It looks like a toy windmill that I played when I was a child.

Xiao Jun, a designer with a certain reputation in the international arena, also installed a round of spotlights on the blades of the windmill.

At night, the colorful leaves of the leaves slowly turned, it is very romantic.

However, this design, that made Xiao Jun very satisfied was completely rejected by the young vice president of the Starfinch Group, Mr. Knightley.

On the day when the building was completed, he came to participate in the ribbon-cutting ceremony and looked at the simple and beautiful windmill and said: "Nein - Nein ~"

This is not the meaning of German, Knightley first criticized the president of the Asia-Pacific region responsible for the shopping mall construction plan.

Later, in front of Xiao Jun who attended the ceremony, it was very straightforward to say that the Chinese people's thinking was too limited and lacked creativity.

Chinese people's thinking is still too limited, lacking creativity?

This kind of view with serious prejudice almost made Xiao Jun angry.

"You can do it." Xiao Jun's nostrils are facing up to the sky. He snorts coldly and looks at this guy.

Mr. Knightley, the young vice president, didn't know what to be humble. It took less than half an hour to give a new idea of landmark design.

An oversized watch...

The watch was placed under the windmill at a forty-five-degree angle, and Knightley also ambitiously changed the power source of the windmill into a self-winding power source for the watch.

[Chapter 292: There is a huge technological gap here.](#)

The Staffin Group is a well-known manufacturer of watch parts in Swiss. This shopping center is dominated by luxury watches and Swiss jewelry and has the largest and most comprehensive clubhouse in China.

Then, designing a huge mechanical watch is also a good idea.

Xiao Jun disdains this. In addition to being practical, the building should also rise to the level of vision and feeling, starting from many aspects.

A watch, which itself does not match the architectural style of the shopping center.

The style of the building is based on the pastoral and natural winds, and the windmill can be well integrated.

a mechanical watch...

Xiao Jun doesn't care. The building belongs to others. He must do whatever they want.

As the proverb says, The squeaky wheel gets the grease.

The ideas that Knightley had come up with, almost gave the group of white-bearded old workers in the group a tearful tear.

If you make a big watch that can break the Guinness record, you must have a purely mechanical watch!

The craftsmen under the Stauffin Group have a high level of skill, and it is impossible to make a set out of nothing. They can process the mechanical parts of the supporting parts with a dial diameter of more than three meters.

Many cities have clock towers, but the large and motor-driven clocks have a simple structure with only a few dozen parts. The mechanical structure of London more than 100 years ago, because of the time error, the manufacturing process has been eliminated for nearly a hundred years.

Even if it is not eliminated, the mechanical structure between the two is completely different.

If Mr. Knightley's father is not the president of the Staffin Group, the Master Craftsman will surely spit on his face.

Not so much, but old Knightley dotes on his eldest son too much.

He is very satisfied with his son's initiative to design the shopping center landmark in Huaxia. At the same time, it may also be due to the skill of the craftsmen, and he has approved the technical public relations of large mechanical watches.

It was hand-made without equipment, and a month later. The mechanical watch that was so large that it could apply for Guinness records was installed in the center of the square.

The windmill can rotate 360 degrees, which is the power source of an automatic chain.

This huge mechanical watch has been running successfully for three days, with an error of thirty seconds per day. I didn't know what happened the day before yesterday. Suddenly, the mechanical watch didn't go when it was running.

A group of watchmakers in the club were responsible for repairing the watchmaker's door. They studied the whole day and after a whole day's research, they didn't find out what was going on. So, they just left the pot to the chronicle studio.

It is said that they have a problem with the rotating structure of the windmill, and the precision is extremely poor, which affects the operation of the mechanical watch.

Xiao Jun, who has been pestered by those foreigners and has no temper, simply invites the Monster Heavy Industry to come here and let them see what is a Chinese without creativity can do!

The group of white-bearded old workers tearing down the huge mechanical watch in pieces. Facing the design drawings, one by one, they used micrometers, roundness meters to measure the accuracy of watch parts.

When Xiao Jun and the Master Craftsman came to the center of the indoor square. Mr. Knightley, with a bunch of white beard watchmakers who looked like masters, was tearing down the huge mechanical watch in pieces. Facing the design drawings, one by one, they used micrometers, roundness meters to measure the accuracy of watch parts.

"Mr. designer Xiao Jun can't your Chinese be more rigorous?" Seeing Xiao Jun, Mr. Knightley, the vice president, complained like a complaining woman: "look at the construction team you invited. The gap between the rotating tables of the windmill before was so large that you can put a pencil into it."

Knightley is speaking English, and Xiao Jun has been in several countries, and its English is naturally proficient.

After Knightley finished, he took a look at the Master Craftsman.

Wearing camouflage overalls, the Master Craftsman has a typical Loess peasant face, or he has malnutrition when he was a child.

The little old man ignored Knightley, and also the white beard masters who appeared in the TV commercials.

"Rigorous?" Xiao Jun's attitude is not good either. He has dealt with foreigners too many times and knows there are too many complacent people and there are too many imaginary prejudices against China.

"I was invited to participate in a hotel completion ceremony in the city of Seo in 2008. As a result of the final measurement, the location of the hotel is 30 cm away from the original reservation."

Xiao Jun rolled his eyes and said: "I am sorry, the fourth tallest building in Germany, will there be such a serious error?"

"I asked the designer of the Atlantic Hotel later. He had an opinion on this error. The rigorous Germans said that the building was no better than the machinery. As long as the quality is qualified, some errors are very normal."

More rigorous, Switzerland is naturally better than Germany.

Knightley moved the topic a little bit and asked Xiao Jun, who is this next to him?

"The technician of a machine manufacturing factory in Huaxia, he came to help you solve it. You have more than ten people, and they have been busy for two days, and they have not solved the mechanical and technical problems."

When Knightley heard Xiao Jun's words, he almost burst to laugh into tears.

"There are 1200 processes to make a mechanical watch. To accurately file a watch, we need 254 parts."

"To make a mechanical watch, there are one thousand and two hundred processes, and two hundred and fifty-four parts needed to accurately grind a watch."

After laughing, Knightley put on a proud look: "The early timepieces have a time error of more than two minutes because of gravity. It is our Swiss watchmaker who invented the tourbillon to correct gravity. The error caused by the machine reduced the time to twenty seconds."

"In order to manufacture the world's largest mechanical watch, our group also deliberately designed a new set of balance wheels. And even the above-mentioned hairspring. Also innovatively used three layers of blue steel Breguet.

"It's not about machine tool gears, and it's making the largest and most sophisticated mechanical watch in history."

"I don't think there is any problem with our design and the accuracy of the parts." A chubby old craftsman also said with a smile: "the problem should be on your windmill turntable. If it's not finished by then, we will really Remanufacture the windmill turntable ourselves."

Whether it's turning the knob on the chain or relying on the wrist to get the power of the mechanical watch, needs a source of power.

Just before the windmill, there is a rotating table to drive the windmill to rotate.

"Mr. Knightley, even if I am a layman, I can see the reason for your mechanical problems is not related to our rotary table." Xiao Jun was a little angry, and his logo design was changed. Now he still blames them.

"Even the gravity of the earth can affect the operation of the clock, let alone the rotary table?"

"Xiao designer, you don't know how to make precision machinery." Knightley pointed his finger at the Master Craftsman: "This technician should understand the technical gap. I can say responsibly China does not even have a factory that can manufacture a clock. Blue steel Breguet hairspring."

Xiao Jun translated the words again.

The Master Craftsman still has a light expression, similar to that of Knightley, who did not put him in his eyes.

Exquisite masters, from the beginning to the end, didn't regard them as the parts of the peak of precision manufacturing.

The group of white-bearded old workers from the beginning to the end did not see the parts that they regarded as the peak of precision manufacturing.

### [Chapter 293: One body shock.](#)

Knightley asked him if he couldn't understand the precision machining industry, especially the difficulty of high-precision machining.

The exquisite master reveals an unpredictable smile and walks to the pile of precision mechanical parts placed carefully on the cushion.

Escaped splint, hour wheel, span wheel, needle wheel, stem, tourbillon, spring.

These parts, only from the perspective of grinding accuracy, can really make a large number of old workers in China ashamed to drill ground seams.

"The problem is with the parts you have fitted."

The words of the Master Craftsman made a group of white-bearded old workers under the Staffin Group unable to sit still.

They take their beard and stare at the master, asking him why he came to the conclusion that the fault was on them.

"Even without even measuring, I came to this conclusion." Knightley shook his head and smiled confidently: "You are unfounded to ridicule our Staffin Group."

The Master Craftsman is calm and continues to say: "The needle has a breakpoint working state, but you can't even check out the most basic troubleshooting."

"Do I need to laugh at this kind of thing?"

Knightley and the group of white-bearded old workers behind him seemed to be hit by the key, and the expression solidified.

The maintenance and repair of mechanical watches is the masterpiece of their group of white-bearded old workers. On the fifth floor of the shopping mall, there is also a separate Gothic decoration, which is full of noble nostalgic and famous clubs.

They claim to be able to repair any antique mechanical watch, and it also collects the most complete limited edition of famous watches in China.

Now they even have a mechanical watch that they have designed and manufactured, and they can't find out the fault.

All parts are not damaged or deformed, and there is no change in accuracy.

The group of white-bearded old workers had no choice but to give the reason to the Chinese side. But the Master Craftsman hit the blood and pointed out their cowardly behavior.

Yes!

The mechanical watch made by themselves can't even detect the most basic faults. Does this require people to laugh at it?

It should be them, laughing at themselves.

"You... how do you prove it?" Knightley glared at his eyes, all convinced.

"Want to know which part is the problem?" The Master Craftsman used his hand to slip over a part inadvertently.

"This way, I will give you some answers."

"If I finish, you can't judge where the problem is." The Master Craftsman carefully looked around the group of white-bearded old workers and nodded: "Then you are..."

"Stupid to a level."

Maybe it's because of the lack of confidence. When he was swept by the little old man who seemed a farmer. This gang of a group of white-bearded old workers, who had high attainments in the field of precision parts, suddenly got nervous.

Something is inexplicable...

They are worried about becoming fools.

This feeling is like a teacher saying in front of a student: I tell you how to solve the problem. If you still can't figure out the correct answer, then simply clean up the blackboard and go home to plant the land may be more promising.

In the minds of this group of white-bearded old workers, the Master Craftsman calmly gave the answer.

"You made a mistake that made you look down on your hands."

"Making large mechanical watches is not a very difficult technology in itself. But you blindly think that when you make a large mechanical watch, you can still control the travel time error within the ten-second error range of a common watch. Instead, you use a design with the same complex structure as a watch. "

"The same processing technology, and design ideas, to create different parts size. If mechanical manufacturing is so easy, then what about 10,000 tons and 50,000 tons of hydraulic hammers? All use 10,000 tons."

"I won't say that the precision of the parts you made is worse than what I have done with my eyes closed."

"Let's talk about the most important tourbillon in it."

"The balance of the balance on the tourbillon looks beautiful. But you used this kind of mentally retarded wire structure to go around this giant mechanical watch with a diameter of three meters?"

After the Master Craftsman finished speaking, on the side of the young vice-president Knightley, the group of white-bearded old workers who looked older than Master Craftsman. All their eyes turned into cockfighting eyes and stared at the Master Craftsman.

There is no swearing, and they have hints of squatting. It was straightforward to tell them the problem was on the tourbillon they were most proud of.

And even the parts on the tourbillon were pointed out in detail.

Their redesigned wheel is equipped with three layers of blue steel hairspring.

A tourbillon consisting of more than seventy parts. It is the core device to distinguish between noble watches and ordinary watches.

An ordinary mechanical watch, for example, has a price of 10,000 Yuan. The mechanical watch with the tourbillon device is sold for 200,000 Yuan.

The tourbillon, which was specifically designed to overcome gravity, successfully controlled the travel time error of the mechanical watch to the second level. The balance wheel above the tourbillon and the hairspring above the balance wheel are the soul devices.

As one of the largest manufacturers of watch parts in Switzerland, the Starfinch Group is a housekeeping business.

Of course, when making this huge mechanical watch, the tourbillon will naturally be used to show its noble blood.

The tourbillon controls the second wheel movement, while the second wheel moves one circle, which drives the minute movement to one frame. And the minute wheel movement to make one movement, which drives the hour wheel to move one against.

Therefore, the tourbillon is the basis of precision. Of course, the parts on the tourbillon have problems, and the whole clock will follow the problem.

"No...no...no." There was a white-bearded old worker who stuttered and said with panic: "If there is a problem with our winding structure, why does it run for three days before, there is no problem?"

The Master Craftsman asked him curiously, "because of the idiocy of the designer, are there few cases of operation failure in a short period of time?"

The group of white-bearded old workers quickly surrounded the tourbillon like a celestial wheel, and the most important balance wheel had been removed.

The Master Craftsman said that their design of swinging wheel and winding wire was simply mentally retarded.

However, all the balance springs have mosquito-like winding solutions. Although they made some changes on the balance wheel, the hairspring did not move.

After the group of white-bearded old workers look at the structure of the hairspring later, and they really found some clues.

The mosquito-like elastic hairspring can evenly distribute the gravity deviation caused by gravity. The size is getting bigger now, it seems that the hairspring...

"I can't tell you the feeling. I think it's a little wrong. However, due to the lack of technology, there is nothing wrong."

"Do you think this structure can't distribute gravity deviation more reasonably?" The Master Craftsman had a kind appearance of being a teacher: "and then there may be problems such as vibration in the filament?"

"Ok?"

The group of white-bearded old workers who have been assigned to the idiots, like the Thunder and all white-bearded old workers are shocked.

#### [Chapter 294: Exquisite wooden boxes of the age.](#)

Do not use the tourbillon to the headquarters, using professional instruments for measurement experiments. This group of craftsmen completely determined by intuition that this is the problem that bothered them for two days.

The metal gravity thing, for a long time, is something that cannot be seen or touched.

Even with the advancement of technology, the Starfence Group still does not have a good instrument to detect it.

But the tourbillon was invented as early as 1795, and it was 221 years ago.

But the tourbillon was invented, one hundred and fifty years later.

How many pieces of watches with tourbillons are manufactured all over the world?

Less than six hundred!

In the 150 years, the world has only produced less than 600 tourbillon watches.

With such a rare number of survivors, it is conceivable how complicated the tourbillon is. How rare is it to master the people who make the tourbillon technology?

The watchmakers of that era were different from the line craftsmen who worked with today's division of labor. They are thoroughly masters, have their own design, and the ability to make a watch independently.

Watchmakers challenged the manufacture of the tourbillon as a Mount Everest. That is the top peak that requires a lifetime of pursuit, and a enchanting comprehension ability to reach.

Because in addition to the problems of precision, the masters have a clear concept and grasp of gravity, which affects the inexhaustible high-level learning of precision parts.

There is no doubt that this man, who looks ugly and looks like an old farmer. It is a long-standing extremist who can independently complete the top masters of tourbillon manufacturing without the help of any modern high-precision machine tools.

You can see the problem at a glance, and naturally there are solutions.

Vice President Knightley's face turned red, and a pair of people wanted to ask for help, but also because of the appearance of face, almost let Xiao Jun smile.

"Hey~ Mr. President, what's wrong with this, is it uncomfortable?"

"Well... oh..." Knightley became dumb, and there was a dumb voice that no one could understand.

If there is a seam on the ground,

Knightley will surely hide the entire body, and then fill the seam with soil.

The problem of accusation was that it was in China. Now, an eye-catching engineer from Huaxia has come and only took a look.

Just glance at them, then defeat them and be proud of them, and boast all the craftsmen for most of the day.

The more you blow before, the more you are now.

Eager, admiration, shame, excitement, these emotions quickly appeared in this group of white beard craftsmen, looking at the eyes of the masters.

This is the gap, and others point out the problem and tell them the problem. They broke their heads and couldn't think of a solution.

"Want to know the solution?" The master of the exquisite smile said: "Please, please, I will help you solve it."

"Ha...haha~" This is the turn of Xiao Jun's turn to face, a tangled expression of strong laughter.

Knightley grew up from a young age, but this does not mean that his head is not good, so he changed the method.

He began to make a big shot of the master of the fine master, and promised that the distinguished master of skill, as long as he can help improve the gossamer on this huge tourbillon, he will give a gift to thank the master.

"No, no, no matter whether we help or not, we must thank Master Qiao." Realizing that he said something wrong, Knightley quickly changed his mouth.

Since Ye Qing explained it in advance and let the master master solve the problem, he would naturally solve it. It's almost time to watch, and the masters are slow to tell them the tools they need to prepare.

The tools are incredibly simple!

Table, tongs, a blowtorch, two long scorpions.

The solution is to design a new wire-wound mechanism, but these tools are the simple tools that the craftsmen can't imagine.

Even in a hundred years, the masters did not have such a simple tool when carrying out the tourbillon winding.

Inside the Stafin Group Building, there is a collection of centuries-old wire-wound tools.

In the era of no CNC automatic wire-wound equipment, even with the help of tools, it is a very difficult process.

With a blowtorch and tweezers?

More than two hundred years ago, the great god of the invention of the tourbillon might be able to do it.

All the incredulity, and all the adoration, disappeared when the master was sitting on the table.

The first hand of the master is to put them on a miracle of watching miracles.

The hairspring in the tourbillon is a ring of blue steel alloy filaments that are coiled according to a specific angle. The master master took off the large hairspring of the cake box, starting from the front end and heating it on the burner to make it soft.

The high temperature softening temperature of this alloy material is 600 degrees, and only at this temperature, it will ensure that when the shape is changed, it will not be affected by the stress and rebound.

It sounds simple, but it is processed on a smart thermostat ceramic table.

Now the master is only using one, without any temperature tips, to heat the hairspring and make it soft.

The master master used a long plaque to clamp the end of the hairspring, and slowly slid through the blowtorch that sprayed the thin blue high temperature flame at a horizontal angle. The magical scene took place, and the blue steel hairspring was completely stretched straight by the scorpion.

The gossamer was straightened two meters, and it was as straight as the ruler. No one knows how he judges temperature and grasps the strength.

The straightening work only took two meters, because there was no place for the table to be too long.

Reheat the hairspring, and the master will bend it again with tweezers.

Whether it was Knightley or the craftsmen next to them, they all turned into wooden stakes, not only breathing, but even their eyes were already caught.

A round shape, but entirely a hairspring composed of a labyrinth of plaids. With the continuous processing of the delicate master's expression, this new wire-wound blue steel hairspring is also fully presented to them.

Inside the circle is a grid of squares, one full two-layer. No one can think of how a master can do this with a long shackle.

A new hairspring, a new sense of pleasing to the eye. From any angle, there are regularities and symmetry.

"His hand, is it a machine?" Someone shouted in disbelief.

Vice President Knightley is even more excited!

in case.....

If this hairspring solution is really feasible, it will not only mean that their huge mechanical watches are repaired, but also that they will also harvest a new kind of wire winding technology.

There is no doubt that all parts, along with the new balance spring, will be restored to the dial of the mechanical watch.

This piece can break the mechanical watch of the Guinness Book and re-run "咔嗒~咔嗒~".

Vice President Knightley, called the overseas phone to his father, the old Knightley office.

It was still at 9 am in Switzerland, and Knightley was silent for a dozen seconds before he trembled and said: "Father, I found a new tourbillon winding structure."

.....

Ten minutes later, Knightley bent down to the master of the master, and his eyes were full of respect.

"Master, what is your current position and salary? I represent the Starfin Group and send you the most..."

"Are you telling a joke?" The master of fineness is completely looking at the eyes of the countryman: "The Xiao designer, UU reading [www.uukanshu.com](http://www.uukanshu.com) you give him a generalization, our behemoth heavy work."

Xiao Jun is very happy to take this job, because it can also attack Knightley in all directions.

After some popularization, Knightley cried and found that he really became a countryman, and he was still a poor man without a room.

If recruitment is not successful, Knightley will naturally realize his promise and thank the ingenious master with a gift.

A craftsman carefully removed a delicate wooden box made of fine cedar wood from the constant temperature and humidity warehouse at the top floor clubhouse.

The wooden box has been around for some time. I don't know why, when Knightley saw the wooden box, he showed a reluctant expression.

The wooden box opened, the master did not move, and Xiao Jun, who was on the side, almost straightened his eyes.

Then Xiao Jun was crazy about the delicate master!

[Chapter 295: Things that can be passed down.](#)

Cedar wood has a natural moisture absorption effect, plus its own sturdy, anti-insect effect. So, it is very popular with high-end collectors.

They take out the wooden box from the insurance room of the top floor of the famous clubhouse. The wooden box is naturally loaded with watches.

The Stafin Group is a Swiss watchmaker for centuries. The collection of watches in the group covers almost all Swiss brands and collections, and the pieces are fine.

"I know Mr. Qing is not short of money. Compared with Monster heavy industry our stafin group has become a workshop."

Knightley, the young vice president, smiled and said: "Give money, I do not think this can reflect the sincerity of our Stafin group. And your master Qing must not care about money."

After that, Knightley's respectful cedar wooden box was presented to the Master Craftsman.

Inside the cedar wooden box, specially printed with gold thread, the logo is elegant and simple with a crocodile leather strap and an 18 cts red gold case.

The red gold round print cross logo on the buckle indicates the identity of this watch.

- Patek Philippe!

This brand, in the name of the collection of watches, does not need too much science.

One of the simplest data can tell everything.

Sosby, Christie, Phillips, these internationally renowned auction houses. But where the auction of famous watches is held, Patek Philippe will always be the ones who dominate the auction price list.

Inside the world's collection of Patek Philippe, there is a saying: "The honesty is kept safe and passed on to the next generation."

"This is a 2499 series watch with a perpetual calendar, moon phase and chronograph function introduced by Patek Philippe in 1951. In the following 39 years, this watch only produced 349 pieces."

"Which of them, the limited edition of the red gold shell has only produced ten pieces. According to the convention, the Patek Philippe Museum collects one piece, and only nine of them remain in the market."

Knightley used the reluctant eyes to look at the Patek Philippe in the pine box.

This is a watch, which is clearly a cash check that is converted into a Chinese currency, up to 30 million Yuan.

The last Patek Philippe 2499 red gold series appeared in the auction house or four years ago, when it had already sold a price of 13 million Yuan.

That is second-hand goods, and the appearance also has some wear and tear.

Their group collects this, which is the second of the red gold series, which has a history of 62 years.

It is brand new and has been kept to its best with the best and better maintenance methods than the one in the Patek Philippe Museum.

After all, the museum has to be exhibited for a long time, exposed to the light source, and the belt buckle itself will be slightly aging.

I am willing to come up with such a valuable gift, naturally in return for the Master Craftsmen, to help them design a new winding structure.

In return for the peach, the other side is the Monster Heavy Industry people and cannot give anything.

But...

This watch is regarded as a treasure watch in the eyes of Knightley and Xiao Jun. The value in the eyes of the Master Craftsman is as low as pity.

If Xiao Jun is squinting at the side, the Master Craftsman must let him change into cash.

When he walked out of the square, Xiao Jun, the designer, almost immediately touched the retina.

"Pateck Philippe 2499 red gold, my God, who wants to send me a piece, I am willing to design a building for him."

"I have to design a picture for half a month and have to do model tests for dozens of times."

"Master Craftsman, you are amazing!" Xiao Jun rushed to him more than a thumb: "In half-hours of effort, you can make money more than I design a building. No wonder Ye Qing always takes you wherever you are, you have to do it with me, You are the boss, I will give you errands."

Xiao Jun lead the way. When Ye Qing was found, he just comes out from Louis Vuitton.

At this time, even Ye Qing carried a lot of small bags. The store manager with good temperament, with several service personnel, chased them to the door.

Seeing the Master Craftsman holding a wooden box, Ye Qing slightly squatted.

The wooden box opened and Ye Qing was even more embarrassed.

On weekdays, the Master Craftsmen were all in the constant temperature and humidity warehouse. And the Patek Philippe watch who was served with lambskin gloves, was taken by Ye Qing very casually.

"Who gave you this watch?"

"Pateck Philippe, this watch should be worth a lot of money?"

"It's worth it, and you can't buy it with money." Xiao Junke, who has a certain understanding of the watch collection: "This kind of watch last appeared in the auction, or four years ago, the product is worse than this one."

"The 2499 is the most representative and collectible one in Patek Philippe. It's not surprising that you have the right buyer for the 40 million Yuan."

"You earned it, keep it with you." Ye Qing threw the watch back to the Master Craftsman.

"Boss, do I bring this kind of thing, isn't it an insult to my own craft?" The Master Craftsman, like the plague, pushed the cedar box to Ye Qing.

"It makes sense. When it goes, I will take you to buy famous brand clothes. I just saw a few pieces in Louis Vuitton for you."

Ye Qing took the watch and replaced the original one with more than hundred thousand Yuan into the box.

It feels good to bring, and it is very heavy and very good.

Xiao Jun was stunned at the sight of a watch of a dozen million with an insulting know-how ...

.....

It's already ten o'clock at night when Ye Qing returns to zhongyun again with a car loaded the luxury brand.

Xiao Jun also invited for dinner. In addition to the construction drawing of the main structure of the building, he also sent Ye Qing a model of a building called a real estate.

The model is made of light steel and glass. If there is no comparison between the references, the model of the building is exactly what Ye Qing thinks the building should look like after its completion.

After Ye Qing took the photo and uploaded it to the circle of friends, he directly placed the building model in the company and let the employees contact the advertising company to create a huge billboard of the building's renderings, standing on the construction site.

Ye Qing sorted out and classify the luxury brand clothing one by one. And took out the mobile phone of the monster factory and sat down on the mechanical engineering chair.

Ye Qing starts the lord's chariot, and he is placed in the base 130 meters below the foundation pit from the perspective.

Now the bottom alloy plate in the base has been welded. The second and third layers are only welded with the support wall. Ye Qing decides to add a night shift to weld the second layer of alloy plate.

A sheet of material is three centimeters thick. But its tensile strength and yield is equivalent to a 12 cm thick homogeneous steel plate.

It is also a box structure, filled with special concrete to increase the structural strength.

A sheet of alloy material weighing a thousand pounds was lifted up by a robotic arm with a magnetic chuck. Then the welding arms are aligned. A blazing arc flashes, almost no welds are visible, and no joints of any slag appear.

This is plasma arc welding, which is specifically used to weld high temperature resistant alloys.

The angry miner is also not idle either. It is in charge for handling the plates. When the Lord's chariot finishes welding a piece of an alloy plate, the angry miner will hand over the second piece in time.

[Chapter 296: Come to 1 long guy.](#)

The next day, when Ye Qing rose, the weather seemed to be colder.

Ye Qing put on a brand-new jacket, he also picked a Versace suit and put it to the Master Metal Expert.

Ye Qing looked at it for a while and felt dissatisfied. He also gave the Master Metal Expert a business bag.

People rely on their clothes, and horses rely on saddles. After the Master Metal Expert had tapped the set of famous brands, he ignored them with his indifferent eyes. No matter from which angle, he was very consistent with the capable and confident image of the top professional elite.

In order to cover his indifferent eyes. When he was sent to the airport, Ye Qing also specially arranged from the optical shop to help him with a pair of pale green flat glasses.

The Master Metal Expert with the internal name Jin Yi, the name on the ID card is Jin Liu Hai, the name that Ye Qing created at the monster factory.

At one o'clock in the afternoon, he will fly to the capital Beijing, Then transfer to international direct flight to Nigeria.

There is also a truck carrying the middle arm of the Mechanical Colossus Type X.

Going north along the Huanhai Avenue northward, Ye Qing kept explaining to the Master Metal Expert all the way, for example, to behave normally, to be served by others, not to drink wine, but to eat symbolically.

"If someone bullies you, you will bully it back. If he will do it with you again, you can bully it again" Ye Qing subconsciously turned over the ID card in the factory mobile phone, which showed the metal expert's combat power was 5.

The combat effectiveness of the coolie is 10. In the systematic evaluation of Jin Yi, there are two words: power and infinity.

It's no exaggeration. If the heavyweight champion of the world has come. Jin Yi can make him go home to find his mother.

So although the Master Metal Expert and Ye Qing are about the same size, I really want to say. Ten Ye Qing are not enough to beaten the Master Metal Expert.

Ye Qing has been sending the Master Metal Expert to the airport lobby, and Huaxing Heavy Industry has also sent two employees to accompany him.

After the two-ton multi-unit middle arm was checked on the machine, the boarding pass was printed at 12 noon, and then the security check was carried out.

In the eyes of outsiders, the Master Metal Expert is a cool young professional in the suit. A luxury brand has greatly increased his return rate, And even the young girl at the ticket gate has kept watching him.

Name: Jin Liu Hai!

The address of the document is Yungui Mountain; in Baidu is less than a hundred miles away.

The ticket inspector girl was silent in her heart, And gave him a good label for the young and the self-improvement.

If the Master Metal Expert takes off the pretender's overalls, the girl must be able to break the throat.

Two horns on the top of the head, the face is like a knife, covered with a layer of black insulated armor. It can be just this horrible appearance. When passing through the security gate, the airport police next to it did not even have a look at it.

At one o'clock, the plane took off on time. In the business class, beside the Master Metal Expert, there was a young girl with fashionable clothes and good face.

The ruthless metal expert made the girl somewhat uncontrollable, but the cool guy didn't even look at her even when the plane flew into the clouds.

The girl simply pretended to be in a hurry and gently slammed her head on the Master Metal Expert.

She gently slept for half an hour, then she cannot wake up only very shyly. And a good conversation about the things just happened in can soothe the atmosphere with this cool guy.

When she woke up, the head leaned back slightly. And the young girl had begun to fantasize the Master Metal Expert, and she showed him a fascinating smile.

A cold and powerful hand was pressed on the girl's head.

With the girl's incredible eyes, the Master Metal Expert said the first sentence in a hoarse voice: "My lady, please a little respect."

At 10 am the next day, the plane that was transferred to Hua Xia Airlines International Flight was parked at the only airport in Nigeria that was open to the public.

Out of the airport hall, a Toyota all-terrain vehicle., and an old truck came over to pick up the three men from the plane.

"Thank you very much, thanks you very much. I am the deputy mine manager of the copper mine. My name is Qiao Pingxu."

Qiao pingxu warmly shook hands in the past, swinging his arms. Revealing the interior of the buttoning of the nylon case, and the placket of the famous Glock 18 at the waist.

Four burly strong, black people wearing camouflage clothes followed.

They are also bulged at the waist and brought the guy at a glance.

"The sea of gold." The Master Metal Expert nodded and turned a blind eye into the Glock.

His reaction made the deputy mine Chief Qiao Pingxu quite surprised.

The domestic security environment can be said to be one of the best in the whole world. The more white-collar elites are, the more flowers grow up in the greenhouse. Most of them have lived for twenty or thirty years, and have not even hearing the gunshots.

When he received the new colleagues sent by the company, those guys who were tall and big became meek and timid lambs as soon as they saw this situation. They all wished they could get into their mother's arms.

The face of Master Metal Expert is still cold and indifferent.

Qiao Pingxu estimated this man, maybe a soldier. After all, the behemoth heavy work technicians went abroad for business trips, and it is impossible to not investigate the basic conditions of the local countries.

Since the rise of the Internet in Nigeria, the information has become swift and smooth; it has seemed that there has been no good news about peace.

It is most appropriate to send a technician who has joined the army. However, the other party is proficient in mechanics and is likely to serve in the armored forces.

When the car started, there were two black camouflage suits stood in the truck compartment and two in the seven seater cross-country vehicle. They took out two AK's that had been just rubbed with gun oil directly from their back and taken them like hugging children.

A Glock was handed to the Master Metal Expert, and Qiao Pingxu stared at his face and looked at it. He seemed to want to see even a trace of tension.

"Master Jin, this shabby place is no more than the domestic. Out of the mining area in the city, if you don't hear a gunshot every day, there will be a big scene."

"Take this Glock. If you are in danger, you will shoot. Don't worry about his mother's law. If it is out of town, the thing will be invalid."

"I want a long gun." The Master Metal Expert nodded slightly.

Qiao Pingxu immediately pulled a long gun from under the seat, or tied the double clip with insulating tape.

The team that transported the middle arm was quickly out of the city. When passing through a toll station guarded by military and police, the roads covered with dusty roads suddenly began to desolate.

Occasionally, a few gray-grey low-rise buildings have been abandoned for a long time, and there are no windows.

"Master Jin, the whole trip is about three days. We have a day from here to the Anute area. It is not far away, more than 400 kilometers. It is a long road with poor road conditions."

Qiao Pingxu looked out the window with great interest and smiled. "But it is not anything at all. After waiting on the grassland, I will take you to play some antelopes to go back and add food."

The Master Metal Expert remembered what his boss said before leaving, he should properly eat some food and point to say it's good.

[Chapter 297: How promote the situation.](#)

Zhongyun City, Huaxia City.

Two very different worlds from Nigeria.

In China; in the middle of the cloud. Developing the economy and industry and trying to catch up with the world is the goal of people.

At five o'clock in the afternoon, the huge renderings that came out of the work were hung next to the construction site. On the renderings, there is a skyscraper that stands in the clouds, has a polygonal diamond-shaped glass curtain wall, and a silver metal frame.

Next to the Tianying Building; the Times Building and the Baolong Shopping Plaza, they became a low stool at its feet.

"The ninety-nine-story building, that can't be the tallest building in Zhongyun?" The passing people were shocked and looked at the building that went straight into the sky: "My God, I have classmates who work in the behemoth heavy work." I heard the construction of the Monster Heavy Industry was less than half a year old. Is it necessary to build a headquarters building?"

"This building is really beautiful, but there is a personal defense project here. Can the building be built?"

"I will know it after a while?"

"I hope it can be established, so that we have a landmark building in Zhongyun City. After that, we will go out and mention the name of the building. It is definitely better to mentioning Zhongyun with this building."

Hengdian Studios, which is separated from the two streets of the construction site, also hangs the same posters of the same size as this one.

There are more people on the scene, and they are generally younger.

"She from the Alien" - shocked on October 2!

There is a slightly obsolete but visually striking starship on the poster, the majestic and sci-fi monsters logos.

Below is the Xu Ning Palace wearing an outer armor and a mechanical maintenance spider running.

When I saw this poster, the grievances of countless boys and girls were ignited.

Previously on the Internet, her promotional film from the aliens has proved the quality of this film. Even the film critics who sprayed the domestic movie as the gimmick gave the most evaluation, but also a slightly simple plot, ruining the top effects.

On October 2nd, the country premiered.

There is still half a month, the major film cities have begun to publicize and build momentum, ready to make a big slam in the National Day Golden File.

Ye Qing was sitting in the office and discussing with several managers. When the film was released nationwide on October 2nd, the behemoth heavy work also followed suit to promote the wave.

In the five-minute trailer, the Monster Heavy Industry logo has only one close-up, and three flat shots.

Director Ding Yin is cleverly using a kind of slowly shooting technique to avoid the suspicion of blunt advertising in many movies.

After all, there is no text in the monster logo, and it also matches the logo of the high-level civilized factory.

Just a few shots also impressed the audience.

Monster Heavy Industries is the investor of this film, and all sci-fi equipment is provided by Ye Qing. The publicity film show is just the tip of the iceberg of the whole film. When the film is officially released, the behemoth heavy work will inevitably become the key word of the online hot search together with this film in the future.

If you can't seize the opportunity of this whole network discussion, let the behemoth heavy work debut, and it is not equal to walking, see a sack of diamonds, but turn a blind eye?

"Boss, our Monster Industrial Building, is also a very good propaganda theme. We can start from the building's technology facilities." Yu Huali, the person in charge of the department, pointed to the renderings on the site outside the window: "For example, the alloy line outside the building, inside High-tech refuge."

"Just to promote the building, I think it's not suitable." Kong Tao, manager of sales department, said: "because the building is not operated externally, it is only for internal office use of our company. No matter how successful the publicity is, the citizens will not experience it."

Ye Qing nodded and praised Kong Tao: "Our building is a place of interest. I think the civil air defense project is one. When we start moving the civil air defense project, it will be a good publicity highlight."

"The best way to promote is to launch a new product, but during this time, I didn't think of a good product solution."

Many managers have nodded because often any company, when it wants to launch a new product.

For example, Apple, and Xiaomi in their annual new product launch conference, will gather countless reporters and the attention of most young people.

Monster Heavy Industry only held a product launch conference, the original grand occasion, several managers still remember the original grand occasion.

The only regret is that the Mechanical Colossus Type I is really out of the ordinary crowd.

At a price of 10 million Yuan the truck, ordinary consumers will not pay attention to or use them at all. If taking advantage of this movie's popularity in the whole country, behemoth heavy industry will launch a product that can be widely used in life...

It will inevitably be more popular than any previous product!

The managers were discussing ideas about new products, and Ye Qing's mobile phone made a new message.

When Ye Qing looks at the information, he smoothly adjusts to the silent mode. The message was sent out.

"Ye Big Brother, are you free?"

Ye Qing showed a warm smile, replied to her in free time, and asked if she has reached Zhongyun.

Bai Dour said he arrived at 4 p.m., and Ye Qing said he was in the company. And Yesterday, he bought two leather bags for her in Shanghai: "Where are you? I'll give them to you later."

She made a little monkey dancing expression and didn't say where she was.

After the new product launch conference. In the future, both in terms of performance and topical popularity, we can rely on new products for a long time.

Monster Heavy Industry only held a product launch conference, the original grand occasion, several managers still remember the original grand occasion.

The only regret is that the Mechanical Colossus Type I is really out of the ordinary crowd.

At a price of 10 million Yuan the truck, ordinary consumers will not pay attention to or use them at all. If taking advantage of this movie's popularity in the whole country, behemoth heavy industry will launch a product that can be widely used in life...

It will inevitably be more popular than any previous product!

The managers were discussing ideas about new products, and Ye Qing's mobile phone made a new message.

When Ye Qing looks at the information, he smoothly adjusts to the silent mode. The message was sent out.

"Ye Big Brother, are you free?"

Ye Qing showed a warm smile, replied to her in free time, and asked if she has reached Zhongyun.

Bai Dour said he arrived at 4 p.m., and Ye Qing said he was in the company. And Yesterday, he bought two leather bags for her in Shanghai: "Where are you? I'll give them to you later."

She made a little monkey dancing expression and didn't say where she was.

Ye Qing's discussion continued. Ten minutes later, the front desk reception came over and gently knocked on the door, saying to Ye Qing: "there are two girls outside they want to come to see you."

"One is called Bai Dour, and the other is Huang Xiaoman."

"Let them go to my office, and I'll be there later." Ye Qing told on the managers to discuss first.

Bai Dour stride into the office, dressed in beige formal clothes, wearing a beautiful blue bow on the neck, is smiling at Ye Qing.

The girl carrying the equipment pack, the age and the same size, stood a little restrained.

"Ye Big Brother can you give me an exclusive interview?" She smiled and watched Ye Qing: "It is an interview about the Monster Industrial Building. We know the Monster Industry Building wants to build the first high-rise building in Zhongyun. Lets we do a news program with the Monster Industrial Building."

#### [Chapter 298: The interview begins.](#)

It was also discussed before that the company could publicize the movement of civil air defense project as a highlight.

As a result, the publicity plan hasn't been put out yet, so I came with my assistant Bai Dour.

Zhongyun TV's current ratings have steadily increased, for the number one rating in Zhongyun City and its subordinate counties.

Director Liu Yun made a row of public meetings and used all the accumulated advertising fees in the Taiwanese to create a large-scale outdoor variety show that achieved impressive results.

Every week when the program starts, the ratings of zhongyun TV station will temporarily jump to the second-line radio station in China. And the ratings of the current phase are slightly higher than those of the previous phase.

The popularity of advertising fees and invitations has also risen steadily.

The noon and evening news of zhongyun TV station is the program with the highest and most stable ratings besides "escape from the secret chamber." Doing an exclusive interview in the news is more effective than Ye Qing's own propaganda.

Bai Dour can come for an exclusive interview, naturally will not be the assignment of tasks in Taiwan.

She is now hosting a food show. The program has just started two episodes, and it has already turned over two ratings.

She just came back from a business trip, regardless of fatigue, she took the initiative to take the task to give Ye Qing an exclusive interview news.

This movement impresses Ye Qing, his mouth does not say anything, but my heart will remember it silently.

The two cleaning women quickly wiped the office clean and the staff lifted the model of the industrial building in the reception area.

Yang Baihe, the manager of the propaganda department, also brought in a pot of orchids he had raised.

After a simple communication of the topics that needs to be interviewed. When everything is ready, assistant Huang Xiaoman set up the camera, sitting on the side of the desk with Bai Dour, and wearing a delicate suit and drew the curve that people couldn't bear to move their eyes away.

There will be a narration before the interview. This is a good time to go back to the TV station to use the recording studio. Because it is a news interview, the duration is set in five minutes.

She took a squint at Ye Qing, and Ye Qing blinked at her.

The interview started.

She gazes at Ye Qing with a soft gaze: "Mr. Ye, I think many people will have such a question. Why did you choose the name of the Monster Heavy Industry when you set up your own business?"

"Because I want to have a heavy industrial company that is different." Ye Qing puts his chin on his hand and sits on the mechanical engineering chair. He smiles slightly at the camera. "Everyone dreams, and the Monstrous is the thing where I want to realize my dreams."

"Is that building on your desk, is it your dream?" The camera shot on the model of the building, and then asked: "The building is said to have ninety-nine floors, and it's The shape is really beautiful, just like a lot of sapphires set in a platinum box. I think it will become a landmark building in Zhongyun City after it is built."

"Our Monster Industrial Building is very willing to have the honor of being a landmark building in the hometown."

"The original site of the building is Zhongyun's department store. I heard that when the building was demolished, there was a civilian air defense project built in the late 1970s below it. Then this civil air defense project became a burden for you to build the building."

The key point is to let the entire Zhongyun citizens know it is time for the Monstrous Industry to have real technology.

"For this question, I think people who have a little knowledge of architecture will ask this question." Ye Qing changed his posture and gently rubbed the architectural model on the desk, confident: "however, under different technical conditions, sometimes the burden is not the real burden."

"When I was in elementary school, there was a household electrolysis factory next to the factory. When they were doing electrolysis, they would deposit more than ten tons of anode mud waste every month. These wastes can only be thrown in a dry pond outside the factory."

"Until one day a foreigner came and offered to buy these anode slimes at a price of 100 Yuan per ton."

"The owner of the electrolysis plant was very happy. Not only did the anode mud in the pond be sold out, but he also thought it was profitable to buy the anode mud produced by other factories."

"After the technology spread to China, it was only understood that foreigners who bought these anode muds could refine a large amount of precious metal and even gold and silver."

"I understand that this civil air defense project is not really a burden in the eyes of Mr. Ye, but a natural building that can be rationally utilized."

"Yes, just change the location of the civil air defense project."

"Change the location?" Bai Dour fit together with a surprised look.

"Mr. Ye, according to the information, this civil air defense project has a weight of 250,000 tons. Can the Monster Heavy Industry really move it?"

"We are scheduled to move this civil air defense project on October 1."

"The scene must be very shocking. Can we go to the live broadcast of the sky TV station?"

"Warmly welcome."

On behalf of the TV station, thank you for the invitation, and after talking about a few topics. The time was almost enough, and Bai Dour got up gracefully and shook hands with Ye Qing.

Huang Xiaoman took advantage of the camera to capture the picture, just in the condescending position, and captured the Monster Industrial Building site outside the glass window.

There are two Mechanical Colossus Type X working on the ground, and even though there is a street, the Mechanical Colossus Type X is still extremely shocking.

It's like a steel behemoth.

Mr. Ye, thank you for taking the time to participate in this interview, despite your busy schedule." While holding Ye Qing's palm, for Bai Dour there is a kind of holding the tree imposing, which can warm his heart and can count on the sense of past peace.

Bai Dour cannot stop to make the coquettishness of the eyes, because her soft boneless palm has been gently pinched several times by Ye Qing.

"To Mr. Ye, you are the youngest and most tax-paying company president in Zhongyun City. Do you have any thoughts and feelings, do you want to talk to young people in front of the TV?"

"I want to tell everyone like me, the young people who are struggling towards the goal.

"To plan an extraordinary life goal for yourself."

"Our company has a mechanical engineer. He was born in the most troubled mountainous area of China. When he was a child, he could eat half a sweet potato. It is a rare delicious food. Long-term malnutrition, and heavy farm work in his childhood, will be his backbone. Bending, when going out to make a living, because the physical defects are laughed at by everyone."

"But he has a dream. He thinks he was born to be unconventional."

"Now, he earns 30 million in half an hour by pinching a bunch of alloy wires."

.....

At noon the next day, Zhongyun TV's midday news broadcasted the interview in the screen.

Zhongyun University is the mother school of Ye Qing, and at the same time, there is a strategic talent transfer relationship that the principal thinks.

So Zhongyun University, which has just started school, has called all the students to the classroom. Watching multimedia projection TV, and learning the success of Ye Qing, the best student.

In the class of mechanical engineering departments. Cai Chenning, an associate professor who had followed Ye Qing's main course, was full of red light. He stood on the podium like a spring breeze and told the students downstairs had taken the time to Ye Qing.

Now we can't be called an associate professor, because he just passed the rank of professor a few days before the start of school.

In the projection TV, after a narration, he made a brief introduction to the Monster Heavy Industry work.

The interview started.

In the projection TV, after a narration, he made a brief introduction to the Monster Heavy Industry work.

The interview started.

Ye Qing sits on a simple but yet luxurious leather-wrapped mechanical engineering chair with his left hand under his chin and a sitting posture.

All the boys in the class couldn't help but raise their left hand and learn to adjust their sitting posture and imitate the movement.

A boy sitting in the front seat found Ye Qing had a watch on his wrist, and he deliberately turned the watch on his wrist, trying to imitate the long model to the most like.

A lesbian next to him sneered: "Hey, what are you?"

"Longines, bought more than eight thousand."

"Tells me about Mr. Ye, do you recognize him?"

[Chapter 299: Setting a small goal.](#)

"Then tell me about Mr. Ye's watch. Do you recognize it?"

The classmate at the front desk stared at the projection TV and watched it for a long time. He scratched his head and smiled: "I don't see any brand, it is not Longines anyway."

This general appearance can be placed in the Department of machinery with more wolves and less meat, and still enjoy the class of flower-level treatment.

The girl asked a student behind her. The classmate's family is also very good. He always likes to show off some famous brands in the class. But after watching for a long time, he didn't find the clue.

Now students are much more active in class than after 8 o'clock. Someone started, and soon there are more students who are involved in the topic of watches.

They want to know what kind of watch the senior brought with him.

Exploring - it was a very interesting thing.

People can find out the answer in the moment they explore the answer and get great satisfaction in their hearts. What's more, this exploration or the exploration of what kind of watch Ye Qing, the legendary scholar, brought, does not suit their appetite too much!

"I am going online to search!"

"I have a cousin who opens a watch store. I will take a photo and show it to him."

The cousin who opened the watch shop was very forceful. The picture passed in less than half a minute, and there was a rush of information in the chat box.

"I rely!"

"If I am not blind, this will be Patek Philippe, the most collectible 2499 watch."

"You can search this watch online. This one is red gold. Don't get it wrong with gold money."

An indescribable sense of satisfaction came to the classmate. This feeling may only be in the LoL promotion, winning five kills.

He announced the answer aloud, and then the whole class was searching the Internet with their mobile phones.

Even Professor Cai Chenning, who quietly turned his back, used the mobile phone to enter the keywords of 2499 red golds limited editions.

In the following time, various unbelievable voices were heard in the classroom.

There are those who suck in the air conditioner, scratch their heads and shout why this watch is so expensive, and those who smash their legs and pucker their lips and say that some seniors lack hanging parts between their thighs. I want to give the students a difficult word like monkeys.

"Thirty or forty million Yuan the watch, if you want to bump them, a house will be gone."

"As a result, the seniors are willing to bring them out. According to the Internet, nine other such watches have been collected and passed on to the next generation."

The topic quickly stopped because their Ye Qing senior had changed their posture and said something that they could not understand if they broke their heads.

"We are scheduled to move this civil air defense project on October 1."

The students in the class were suddenly paralyzed.

"I am a professor, can the civil air defense project really move?"

"Two hundred thousand tons, I remember that the large objects moved as a whole, and the heaviest was only tens of thousands of tons. It was still moving on the ground. How can the civil air defense project move underground?"

"I don't think it's moving around, because the buildings are both left and right. There is not enough space at all. Will it move up and down?"

"It is even more impossible to move up and down. Because of the ripples caused by the center of the earth, you must exert more force than the left and right translation to move it."

When the students can't guess, they ask the professor if they know how to move the civil air defense project.

How to move, this involves technology in the field of machinery industry. This is the profession of Professor Cai Chenning. However, he spent a long time, and his brows became a group, and he uttered a sentence: "This problem is a homework, and everyone starts the brain and sets a reasonable plan."

"You pay homework before October 1st, when we select the closest plan to the design based on the scene of the construction site."

The class was suddenly silent, and the students looked at Professor Cai Chenning with horror. It was even more incredible to see the movement of the civil air defense project.

"Cough... watch TV, watch TV." Professor Cai Chenning turned his head to cover up his embarrassment.

This embarrassment did not last long. On TV, the person who fascinated many boys and looked straight into the eyes, and asked Ye Qing a question that made the majority very interested.

She asked Ye Qing, what words should I give to the young people in front of the TV?

"To plan an extraordinary life goal for yourself."

"Our company has an engineer."

"Now, he pinches a bunch of alloy wire casually and makes 30 million Yuan in a half-hour."

An inspirational story about a young man who was born in a mountainous area and didn't even have enough to eat.

Although the first half of the story is the ingenuity of the Master Craftsmen is not right, the second half is not exaggerated.

In the class of mechanical engineering, the boys are all red eyes.

Not moved, but stimulated by those 30 million!

"Teaching professor, there is really someone who can do machinery. Can earn 30 million Yuan in a half-hour?" A male student in the front seat asked in a hurry: "When I started school, some seniors told me that single dogs were the ones who learn machinery, even their wives is not easy to find in the future?"

Professor Cai Chenning was drinking tea, and a mouthful of saliva came out directly. He was choked and coughed continuously.

"Which cough, which department?" Professor Cai Chenning clapped his chest fiercely and his face turned red, and said vaguely: "don't your seniors tell you the answer?"

"I have never seen in half-hour earn of 30 million Yuan, but in the 85 years, Zhongyun No. 1 Machinery Factory has not yet closed down. There is something who makes me remember it until now."

"At that time, Zhongyun Thermal Power Plant built a new motor unit, the first machinery factory, which was responsible for producing a 500 megawatt power motor. The motor was to be used with the steam turbine. At that time, we did not manufacture steam turbines and could only import them from Germany. As a result, we produced them. The motor has a slight abnormal noise and jitter during operation."

"After turning to 15 00, the motor with a diameter of 3 meters, abnormal sound and jitter, can be felt by the layman with his hand."

"The rated power of the motor is 18 00 rpm, and the power can't be transferred. Naturally, the electricity can't be connected to the grid. The most deadly is that under abnormal vibration, the steam turbine that powers the motive will be damaged by the variable box main shaft connection."

"At that time, the state's foreign exchange was all earned by handicrafts. It was the rhythm of being scolded to death by the whole nation to destroy the steam turbine unit."

"At that time, a steam turbine unit was nine million dollars. At that time, the state's foreign exchange was relied on handicrafts to earn a little bit, and the steam turbine unit was damaged. It was the rhythm of being scolded to death by the whole nation to destroy the steam turbine unit."

The students in the class did not speak, and they listened attentively to the professor to recall the past.

Professor Cai Chenning continued to drink tea and said: "All the experts of the First Machinery Factory are all coming. My supervisor and I are also invited to participate in the troubleshooting."

"As a result, all of us worked overtime for a total of three days, and assembled more than 20 tons of stator windings, rotor reloading. Finally, the main shaft was removed and measured inch by inch with the instrument. The teacher fufu touched it back and forth with his hand, and his hands were blistering."

"The result is that we think there is no problem. When the motor is reloaded, the abnormal noise continues to exist."

"The power supply gap of Zhongyun lasted for a week, until Siemens sent technicians from Germany to maintain the steam turbine. We just met the savior and asked help from their technicians."

"German technicians only checked a skew and told us that the cause of the fault was found. But Siemens asked for 100,000 US dollars to tell us where the problem is."

"In the past, in 1985, according to my monthly salary of 60 Yuan, I had to eat or drink for two hundred years to earn so much."

"Here, I can't do without the money."

Professor Cai Chenning's face was full of regret: "The German technicians said that there was a slight deviation in the concentricity of the shaft hole of the spindle on the motor end caps on both sides."

"Two covers and two holes, because the holes were not made well, we lost 100 thousand US dollars of foreign exchange that year in vain."

"In the year, 100,000 US dollars, according to purchasing power, how is it equivalent to us now have 10 million deposits."

After that, Professor Cai Chenning converted the tone of the language.

"Students, you say, if the mechanical engineering profession is well learned, can you earn a lot of money and go to the top of your life?"

"You can!"

The following students spoke in unanimous.

### [Chapter 300: Strange guys](#)

After the interview, Ye Qing and Monster Heavy Industry became popular in the campus forum of Zhongyun University.

"Give yourself a zinc label, such as half-hour to earn 30 million!"

"You see I am carrying a watch, but I'm actually bringing a gold mountain."

It is not just a forum in the school. Since the afternoon news has been broadcast, the construction site opposite the Blue Tower Building has become the location of the attraction. Many citizens ran over and took photos with the Mechanical Colossus Type X through the wire fence wall.

Look at this posture. As long as it is open every day, the Mechanical Colossus Type X can earn a lot of money by collecting the photo fee.

I know there are not many people who know that the office of Monster Heavy Industry is located in the Blue Tower Building. Many young people who have read the news have run to the official website of Monster Heavy Industry to register letters. And then the administrator asks if your company still recruits people, even if you want to apply for a cleaner.

At this time, Ye Qing was sitting in the office, quietly watching the Monster Factory.

The question about launching the next new product.

Yesterday, the managers discussed for a long time but did not discuss the product plan that made Ye Qing satisfied.

The best opportunity to launch a new product is only one week after her release from the alien.

A domestic sci-fi film, but in terms of special effects, it is not inferior to the domestic sci-fi film of Hollywood blockbuster, which will definitely attract all audiences.

At that time, as the provider of all science fiction mechanical props. Monster Heavy Industry, as long as it was able to launch an interesting and practical product close to people's lives.

Guaranteed it is more better than the current Apple Seven.

Before the Monster Heavy Industry's three products, only the mechanical engineering chair, can be regarded as a product close to life.

The metal engraving machine, and the Mechanical Colossus Type I, are industrial uses and the ordinary residence does not use that thing at all.

Behemoth heavy industry has a serious bias in the field of intelligent technology. If there are two test papers, the mechanical industry test paper will guarantee 100 points, but the intelligent technology test will give five points.

The machinery industry is the cornerstone of human science and technology civilization.

Ye Qing step by step and steady and achieved the world's number one manufacturing throne, just a matter of time.

But Ye Qing does not want to be like the top entrepreneurs. Wait between forty, fifty or even fifty or sixty years, to be the first in the world.

But now almost any hot-selling lifestyle product involves smart technology.

Even with the mechanical engineering chair, Ye Qing has to honestly purchase the control chip and the general program software from the market to realize the complicated functional operation.

At present, the fourth stage of the Monster Factory is in the rank, has risen to 21st place, and its honor value is as high as more than 300 million Yuan.

The economic aggregate of Jiangnan Province is the first in China, and the top ten enterprises are all over 100 billion Yuan.

The ranking will be given a certain bonus. According to the high and reliable technology, and the content of the enterprise and it is not simply to look at the total assets. Ye Qing estimates there will be another 15 billion Yuan, which can be used to expand the size of the factory and squeeze the ranking into the top ten.

Squeeze into the top ten and start a new fifth stage.

Ye Qing believes that in the fifth and sixth in the future, it will continue to the ninth stage of the top. The Monster Factory will definitely have a comprehensive technical suppression in the field of intelligence and energy.

Really change the world!

The construction of the building used all the savings made by Ye Qing.

Therefore, taking advantage of the once-in-a-lifetime opportunity. To launch a new product with sufficient rent to expand the scale of the factory. And push the Monster Factory to rush to the fifth stage.

Looking at the building design of the Monster Factory. Ye Qing licks his lips and keeps thinking about what kind of products can really lead to the rush of the whole people.

In the product design, the rice cooker will never work, and the long battery life will not work.

Those absolutely mobile phones, computers, cars, airplanes, and the like, none of them.

Create a mobile phone case that is resistant to falling?

Or a car with superior safety?

These are not good, there is no chip core technology. There is no breakthrough in energy, and there is still a long way to go to replace the old companies that have already occupied the market.

Ye Qing always thought that the company staff reminded him that dinner time is up and he has not yet thought of a good product idea.

Switch the product drawings of the monster factory phone to the monster recruitment page. Ye Qing thought about the Master Metal Expert who was sent to Nigeria. Has its health been changed?

The life values of the monsters are different. The Monster Laborer has 1000 points of life, the Master Metal Expert has 500 points, and the Master Craftsman has 100 points.

But they have one thing in common. When they are hurt, their health value will fall.

The country of Nigeria is poor and chaotic. If Master Metal Expert is in danger, Ye Qing will not be informed at once. Because the Nigerians are not in a hurry to give satellite phone notifications.

Ye Qing can recall the Master Metal Expert to the Monster Factory at the most critical moment based on the drop in health.

Back to the old nest, its health can be slowly restored.

Confirmed his life is still 500 points, Ye Qing is safe to go to the restaurant area to eat.

Ye Qing is dining, and the Master Metal Expert who is thousands of miles away is also eating.

Nigeria is located in the western second-time zone. It's the evening on Ye Qing's side, and it's sunny at noon on Nigeria's side. There are six skew time differences between the two places.

It takes a day's journey from the airport in Nigeria to the Anute area where the copper mine is located.

At this point, the Master Metal Expert and teams escorting the middle arm have entered the sphere of their own power in the Anute area.

Deputy mine chief Qiao Pingxu proposed that the desire to hunt a few antelopes for meals was not lost.

When passing through an uninhabited grassland, they happened to meet a group of antelopes who drank water in the puddle. Qiao Pingxu was looking forward to inviting the Master Metal Expert to come to the campfire.

Qiao Pingxu thinks the Master Metal Expert is like a retired soldier. Then, by shooting a gun and queuing his head, he can naturally judge whether he has been exposed to regular shooting practice before.

The Master Metal Expert didn't drag any water. He got out of the car 200 meters away from the puddle and pulled the trigger.

"Burst"

After the three shooting, Qiao Pingxu and the local security guards changed their eyes to look at the Master Metal Expert who is respected for its Alzheimer's disease.

This fire shot.

It's a beautiful shot, but you're playing on the grass two hundred meters away. What's the matter?

I don't understand the three-line any more. It cannot be the antelope in the west, but the muzzle of the gun is to the south!

"I am testing the ballistics of this firearm." The Master Metal Expert explained without changing the color.

The huge gunshots scared the antelopes, but the two local security guns and reflections were good. When the antelopes fled, the guns followed.

More than forty bullets stumbled over five fat antelopes.

It was also through the just shooting, and Qiao Pingxu judged the Master Metal Expert, did not touch any military shooting training, because he did not aim with the gun.

Not only that, the technician who seems to ask both the gentleman and the cold feeling is probably a kind-hearted person who can't bear to kill.

Otherwise, do you aim to fire in another direction?

There are two slanting distances from the mining area, and the hungry team members are stealing on the side of the road.

Four security guards and two drivers ran away like antelopes. In a few minutes, they ran back into bundles of dry branches.

Take the fire, deal with the antelope, and then they coveted in the face of Qiao Pingxu.

"Persevering" six black people are full of poor English, their eyes are full of flattery.

"Master Jin, what kind of mature antelope do you want to eat?" Qiao Pingxu skillfully uses a paratrooper knife to remove an antelope foreleg, which seems to be reserved for the Master Metal Expert to enjoy him.

"The kind with blood!"

Qiao Pingxu is speechless, thinking about this, really a contradictory and strange guy.
