

M Factory 571

Chapter 571: Legendary equipment.

The wait is still so painful; Ye Qing did not know if it was his mood or because the Monster Heavy Factory finally got out of the national category and entered the world category. This is why he felt the upgrade time seemed to be extremely long.

From 1%

At... 33%

At... 66%...

67%...

Watching the progress bar slowly progress, Ye Qing couldn't help but wonder 'what would be in the sixth stage?' And that didn't stop the Monster Factory in the upgrade, to remember there will be mysterious equipment in the sixth stage! 'What is it again?'

In keeping with the principle of getting more and more rewards, the Fifth Stage Monster Factory gave the legendary hero Tianjin. At the sixth stage, will the theoretical reward be stronger than that of the electric crystal?

It took almost five minutes for the program to take one step forward to 68%.

Standing on top of a barren mountain, Ye Qing would hold the Monster Factory cell phone and look at it every now and then, then face the sea and gaze at the sea for a while.

In the end, he felt it was a mistake to stay and wait and do nothing, so he took out the cell phone from the magic crystal and clicked on a variety show in which Xu Ninggong sang all about. by wearing a mask, instead of being immersed in boredom thoughts.

He had watched the new masked singer's show, and the show only aired twice this week. Xu Ninggong is a queen-level figure. While singing she beat almost all the singers. Many people call her the great demon queen.

It stands to reason that with her level of existence, she didn't need to brush her face on every variety show, however, she had told Ye Qing on WeChat that this kind of show wearing a mask and trying to hide her personal characteristics, so that the audience and the judges can't guess who she is, is a lot of fun.

Even Ye Qing only knew she was going to the show, but he didn't know what nickname she was going to get into her character or what song she was going to sing. He asked her one day on WeChat, what is the pleasure of participating in this kind of show? As a result, Xu Ninggong responded with a message, saying that covering her face lets viewers guess who she is, and it feels good to her so that she feels like a different person. And let him guess which of those masked singers is her.

Ok, ~ Ye Qing slowly calmed down while watching the show. Now that he was chasing the last issue, he couldn't find Xu Ninggong's shadow among the six guests, and his suspicion boiled down to two singers

singing very well. Regardless of her, as long as he had time to listen to a good song, it shouldn't be missed.

I don't know how much time passed, but Ye Qing, who was sitting on top of the barren mountain cooling off with the sea breeze, suddenly heard a "Dididi ~" sound that was different from the sound of musical instruments and sings.

At that moment, Ye Qing seemed to hear the most natural voice in the world. He quickly threw away the Magic Crystal phone and pulled the phone out of Monster Factory.

100%.

"Upgrade complete."

Under Ye Qing's attention, the Monster Factory cell phone instantly burst into a dreamlike blue light, even sunlight could not take away the color that belonged to it. When the blue light dissipated, the Monster Factory cell phone changed again. Its shape has become thinner; the original rounded lines have become a little more without edges and corners.

"The upgrade to the sixth stage is complete, and the continental ranking is open. I hope the user will keep working hard and move to the seventh stage as soon as possible."

"Legendary equipment, energy tower."

"O / 1 can be recruited."

"Energy tower?" Ye Qing was surprised. He looked at the card-shaped reminder box on the new factory interface. It was a metal base with mysterious electric patterns, a translucent crystal tower above, and the top of the circular tower with two colors of metal; one is silver and one is black, slightly scattered above. He didn't know the height or size of the entire energy tower. But even though he had looked at his thumbnail through the screen, he could feel its mysterious atmosphere and its power. It was not science and technology on earth at all. In the body of the energy tower, it seems that there are countless thunders and lightning.

"Energy Tower: The only legendary piece of Monster Heavy Industry Stage 6 equipment capable of transforming any energy and charging up to 20 billion kilowatt-hours of energy. To own this tower is to have limitless possibilities."

Watching this introduction, Ye Qing felt his heart was about to fly. What is the concept of 20 billion kilowatt-hours? The whole city of Shanghai consumed less than this amount of electricity in one year. It is just in accordance with the principle of conservation of energy. The energy tower will certainly not increase energy for no reason. There has to be a conversion of energy. Is it nuclear power, or is it something Ye Qing didn't know much about?

With a hint of doubt, Ye Qing clicked on recruiting.

"Recruitment failed!"

Recruitment requirements: 500,000 pieces of gold, 10 kilograms of high purity (plutonium 239), 200 kilograms of transparent crystal, 1,000 tons of pure combustible ice, 50 kilograms of high purity metallic tungsten, 5 kilograms of metallic palladium of high purity, purity...

“...”

“...”

Seeing these instructions, Ye Qing was speechless for a long time. If we say that in the fifth stage, 200 grams of large diamonds were used to recruit Tianjin, he could not also spend money to have this energy turn. He looked dashing. He really wanted to say something about the Sixth Stage Energy Tower. It cannot be done. No amount of money will work.

Look at what these things are; High purity metallic tungsten with strict purity requirements to exceed the limit of the current industrial level. There are still a thousand tons of combustible ice, where can Ye Qing get this thing?

There's some in the lab at Shanghai University, but this thing is sealed and frozen in the warehouse, there are only a few grams of it. The quantity of a thousand tons can only be extracted by itself. Ye Qing gritted his teeth and thought about producing it with all his might.

The ten kilograms of high purity plutonium made Ye Qing truly powerless. The purity requirements are strict, and the purity is only ninety-five. But how do you get hold of ten kilograms of high purity plutonium? Plutonium with purity greater than ninety-three is also called military grade. Plutonium: this radioactive material has always belonged to a few countries in the world. They are turned into nuclear bombs, stored several hundred meters deep underground, with many checkpoints and unknowable locations with a permanent nuclear bunker.

As for the purity of 10 to 20 in nuclear power plants, it is also mixed with other materials like uranium, which loses its instantaneous fission capacity to prevent the purified plutonium from being used by the military. A few hundred tons of plutonium are unnecessary. Where could Ye Qing get high purity plutonium? He couldn't steal it from the nuclear arsenal, could he?

Not to mention if Ye Qing could find it, even if he does find it, it looks like he can't steal it. After all, it is in the best-kept place among all of mankind's valuables. A nuclear bomb easily weighs a ton, and there's no point in stealthily moving the Electronic Messenger around to retrieve it, it can't do such a thing. What could he do about it?

The Energy Tower cannot be recruited, so Ye Qing let him down, because in order to get this thing he needed military-grade plutonium and he didn't know where to find it, so he temporarily abandoned this idea of recruiting.

In addition to the Energy Tower, the newly improved Monster Factory introduced a lot of new things that await the Factory release by Ye Qing.

After the previous leveling routines, Ye Qing rubbed his hands, first checked out designs for free, then went to find out about the new monsters and their new features, and like black tech, he could get at the lottery was much better than the one he could buy with gold coins in the drawings column. He took a deep breath and lightly tapped the roulette wheel on the screen.

When the spinning wheel stopped slowly.

“Ding ~”

“Congratulations, you have received a copy of the drawing [Plasma battery].»

Chapter 572: Nuclear weapons and combustible ice.

[Plasma battery!]

[Use a brand-new medium to store electrical energy. With this battery you have limitless possibilities.]

Ye Qing's tangled mood instantly improved because the plasma battery is so powerful. The energy problem is also the biggest problem plaguing Ye Qing, to put it better, the development of electronic technology as a whole. The specific data of the plasma battery are not yet known, but the confident introduction of Monster Factory has already made Ye Qing realize that this is revolutionary battery technology.

After the raffle had been over, Ye Qing reviewed the four black tech designs that are available for purchase in step six; electromagnetic motor, sound-absorbing steel, monocrystalline nanomaterial, Thunder processor chip.

There were four types of dark technologies, and every time Ye Qing studied one, his inner joy increased by one. No matter which of the four sciences and technology blueprints here came out, they're pretty overwhelming. Particularly sound-absorbing steel, as depicted in the drawings, this alloy steel is a powerful material that can absorb sound waves of different frequencies and electromagnetic waves of different frequencies. Isn't that sound-absorbing steel the kind of shield material that Captain America holds in Marvel?

If Nitinol is used for physical defense, then this sound-absorbing steel is used for magic defense, which could be used as a stealth material for an airplane, it is simply its best choice of use.

As for the Thunder processor chip, the information presents for this type of chip, compared to land-based products is just like a children's computer and learning machine, there was a huge gap. In Ye Qing's eyes, it was simply a new generation mainframe chip designed for the Magic Crystal mobile phone.

Surprise after surprise, Ye Qing shifted his gaze to the monster recruiting column. In the Monster Factory of the sixth stage, he could recruit three hundred and twenty monsters, and at the same time a brand-new monster is added, the Hardware Master.

The Hardware Master: Good at making and processing non-metallic materials, even a piece of deadwood, in his hands, can regain its shine.

After reading the introduction, Ye Qing recruited one without saying a word. When the white mist around him was washed away by the sea breeze, a cyan-skinned monster, tall and slender, without fangs or horns, but with eerily long ears, appeared before him. Ye Qing patted her shoulder to encourage her, then handed her a piece of overalls for her disguise. Rereading the introduction, this brand-new monster seems appropriate to be a root sculptor artist.

However, Ye Qing knew quite well that in the industrial field, in addition to metallic metals, there are many non-metallic materials that support the entire industrial system, and with the arrival of the Hardware Master, he will fill the gaps of Monster Heavy Industry in this regard.

At the same time, Ye Qing reviewed his factory's brand-new ranking in the Continental Ranking. Monster Heavy Industry fell to 29th place and the top 50 Asian companies on the list are all industrial giants.

China Petrochemical, Samsung, Mitsubishi, Huawei, Mitsui, Sumitomo, Fuji, Hyundai, LG, Anqi... The first 50 places are occupied by China, Korea, and three other countries. The bottom rows are occupied by companies from these three countries. Coincidentally, Monster Heavy Industry's former rival Anqi Heavy Industry was in tenth place.

Looking at these companies now, Ye Qing no longer has the courage to look up.

With the current achievements of the Anqi Heavy Industry, even if it stopped developing new products right now, as long as there is enough time, it can still stay ranked tenth. Of course, Ye Qing is not going to lose his ambitions. When he returned to the office, he began to figure out what kind of black tech should be made in step six. Without hesitating for too long, he decided to start producing the plasma battery, because once the energy problem is solved, it will no longer be just a little innovation, but as soon as he opens the design and I 'watched carefully for a long time, he suddenly realized that if he wanted to make a plasma battery, he had to erect the energy tower first, because the energy-carrying material of the plasma battery must use power equipment to instantly release more than two hundred kilowatt-hours of electromagnetic energy to activate the conversion battery energy carrier.

.....

Two hundred kilowatt-hours... What is this notion?

To give a simple example, the electromagnetic catapult currently being developed by several large countries only needs to release 50 kilowatt-hours of electricity in two seconds to bounce an airplane. This requirement for landfill technology has also troubled countries for many years. No suitable capacitor has been found to store and release this electrical energy. As for the technical requirements, only the power tower can provide a discharge device of 200 kilowatt-hours, which is several times more difficult.

.....

The problem has returned to the origin: the four other black technological drawings have shown that the prospects for their production are obviously not as broad as that of plasma batteries and that it is not easy to develop new suitable products, without obtaining the energy tower.

In the afternoon, Ye Qing went alone to his alma mater, the University of Shanghai.

To build an energy tower, Ye Qing needed military-grade plutonium, which is impossible, so he really had to consider the feasibility of going to a country with nuclear weapons and stealing a lot of it.

Ye Qing decided to look first at one of the materials used to make ice fuel for energy towers. Crystals and precious metals can be bought at a price, but combustible ice and military-grade plutonium are not currently available, and Ye Qing hoped that combustible ice could be made of both of these materials.

Upon entering the campus, Ye Qing was in no rush to walk towards the test building. Dressed in a jacket, he put his hands in his pockets, strolling the greenways, walking, and stopping. The warm early spring breeze opened the buds of the plum trees on campus; these brightly colored flowers were hanging by the side of the road, which is very attractive.

Under the bright sun, a young girl put a scarf on the grass and studied a book in both hands. Ye Qing, who was walking around, looked back at this girl and couldn't help but look at this boy who was a little different from a student.

.....

Ye Qing appears to have a mysterious magnetic field that can stimulate female hormones. Especially the girls who didn't leave school, he always smiled at them when their eyes met his, and this cute exchange of expression made their faces red and shyly avoided his eyes.

.....

It's almost nonsense. Although we don't know the brand of Ye Qing's clothes, his shoes are as clean and shiny as a licked cow. The clothes are as new as where he bought them, and the materials are very good, high-end kind. Coupled with the extraordinary more deadly temper, not to mention these little girls, even if international superstars come they had to watch him more.

"Mr. Ye ~ Mr. Ye!"

An explosion of joyful screams reached Ye Qing's ears, and he turned his head and found that Professor Cai Chenning was trotting and waving to him.

"Master Cai," Ye Qing greeted him with a smile.

"No matter how much time Mr. Ye has to return to his alma mater, you say the date, and we come to the door to greet you," Professor Cai Chenning, who held the lesson plan, was very happy, plus Ye Qing is the pride of Shanghai University.

While talking and walking, Professor Cai Chenning learned that Ye Qing wanted to visit the combustible ice, and he immediately said he could chop some of it and give it to him. This thing is either too rare or not easy to preserve.

"Master Cai, I didn't want to disturb you. I came to school just to see the combustible ice in our lab."

"Listen, you can call us and we can deliver the combustible ice." Professor Cai Chenning picked up the phone and informed the manager, there the manager rushed to prepare the receptions because Mr. Ye was going to visit the combustible ice inside.

Upon arriving at the lab, the manager rushed over and pulled out a few small, sealed metal bottles from the refrigerator.

"These three bottles contain combustible ice. Bottle A is taken from the Siberian permafrost. Three years ago the Russian university came to us for an exchange. They brought combustible ice as a gift, but after used it several times, now this piece of combustible ice weighs only a few grams."

Professor Cai Chenning explained to Ye Qing one by one: "Bottle B is from China National Offshore Oil Group. It is mined from the 1,000-meter-deep stratum in the Yellow Sea oil and gas field, and because China National Offshore Oil Group is not far from us, and one of their employees is still a student at our school, he gave him some combustible ice."

“Bottle C is even more powerful. It is a sample brought from the South Pole by the science research vessel Xuelong. I have heard that this type of combustible ice is buried under a shallow layer of ice, and you can't see it at a glance. They brought a combustible ice cube, and the big universities each got a bottle.”

“And among the three samples, Antarctica has the highest purity.”

Chapter 573: The highest level of “broken arrow”.

Combustible ice is an ice-like crystalline substance formed from natural gas and water under conditions of high pressure and low temperature over a long period of time, and since the cubic centimeter contains a lot of combustible gas in the solid-state than in the natural state, the volume of a cubic centimeter of combustible ice has one hundred and six times more combustion energy than natural gas. Under normal temperature and pressure, combustible ice will volatilize on its own and burn after ignition and is naturally residue-free and cleaner than natural gas. It is simply the South Bowan of clean energy, and the reserves of this thing are also very rich, once it is used on a large scale, it can completely replace the energy of coal and natural gas.

However, extremely severe mining and storage conditions limit the development of combustible ice. It is buried in the depths of the Yongdong soil layer, on the seabed thousands of meters deep, and in Antarctica 6. In addition, combustible ice is strong and as tough as coal and it is impossible to drilling a deep well and channeling it as if to extract oil.

Taking advantage of the low temperature in the laboratory, Professor Cai Chenning opened the three samples of combustible ice and took a little from each bottle with a tool. Samples from the Siberian Yeongdong soil layer are mixed gray, samples from the Yellow Sea are light blue, and samples from Antarctica side 6 are completely transparent, like crystals.

The three kinds of samples, in contact with air, slowly overflowed with visible gas. Professor Cai Chenning quickly placed each sample in a smaller metal container, marked the place of origin, and placed it in the incubator. Combustible ice is not too rare, but it rippled when it encountered air.

Originally, Shanghai University had a few hundred grams of stock, which could be repeatedly tested. The combustible ice that was taken was only the size of a fingernail.

After thanking Professor Cai Chenning, Ye Qing did not leave immediately, after all, he had just received a gift from someone else, and this gift will introduce him to Professor Cai Chenning on a plate of gold.

Sitting in the lab, Ye Qing talked about the energetic subject of combustible ice, and while talking of one subject to another, he talked about the subject of the most technologically advanced nuclear energy, and to half-joking, he said with a smile that the factory's electricity bill cost tens of millions of Yuan per month and for that reason, he really wanted to build a nuclear power plant to power the factory.

“Nuclear power plant technology is not difficult, but management and security are difficult,” Professor Cai Chenning joked: “You want to build a nuclear power plant. It is estimated that at least half of Shanghai's residents will take to the streets to protest.”

“I sigh, even if it does. This technology cannot be used to enrich military-grade plutonium, and the government can approve it. Also, military-grade plutonium is uneasy to find! “

“Military-grade plutonium can be obtained. There are a lot of nuclear bombs in the ocean,” Professor Cai Chenning said with a laugh: “During the Cold War, the Soviet Union and the United States were at strategic war, nuclear bombers and submarines on both sides have carried out high-intensity combat readiness cruises, and there have been numerous accidents with these planes and submarines and sunk in the sea.”

“I remember well the first nuclear bomb belonging to the United States was lost in 1950, called Mark 4, it was carried by a B-36 bomber, and the bomber collapsed before reaching China and that the nuclear bomb fell into the sea.”

“Ah!” Ye Qing was stunned and looked at Professor Cai Chenning in disbelief: “Is there also this kind of bomb?”

This thing caught Ye Qing’s surprise, and Professor Cai Chenning was very happy to give this alumnus, now well-known President Ye, another history lesson that was impressive for his time.

“Haha ~ Yes, more than once.”

“I was unborn in 1950, but when I was born we had not built nuclear weapons in China. The Yankees and old Soviet people built them and due to various bomber accidents, they lost several nuclear bombs at sea. The people of China, who suffered from nuclear blackmail at the time, saw in the newspapers that the two great powers of the United States and the Soviet Union had announced all kinds of news about the loss of nuclear weapons from their countries.”

“Alas, at that time, the gap between us and European and American countries was so big that everyone was in despair,” Professor Cai Chenning sighed: “Take, the most impressive time for me was in 1968 when our country and it was only a few years after the first nuclear bomb was tested. The nuclear submarine of the old beauty sailed in the Pacific Ocean. As a result, a serious failure sank the nuclear submarine carrying a nuclear bomb in the depths of the sea.”

“At that time, dozens of US and Soviet Union nuclear submarines were on the cruise before we had our own nuclear submarine in China.”

“...”

Not having experienced the Cold War years of the two great powers of the Soviet Union and the United States, Ye Qing really didn’t expect so many bizarre and absurd things to happen.

The nuclear bomb is the greatest light in human history, and it is also the most terrifying light in human history. Even if you lose it, you can lose it for good and can lose dozens.

But thinking of the tens of thousands of nuclear weapons in both countries during the Cold War, Ye Qing felt that everything was reasonable.

Even today, in the 21st century, when plane crashes are planted in the sea, there are still examples that cannot be found anyway. Also, what can we think about what happened during the Cold War when the electronic level was extremely low.

Professor Cai Chenning continued to speak on this topic, and giving Ye Qing popular science, the United States divided the nuclear arsenal accident situation into several levels. These are “Broken Arrow”, “Broken Spear”, “Dull Blade” and “Empty Arrow Barrel”.

There have been hundreds of “broken arrow” accidents, but most nuclear warheads have been successfully recovered, but dozens of them have been unfound so far. The most recent has been going on for decades, and the United States has long since stopped looking for it. Among them, there are a few cases where the approximate sea area is known, but because the seawater is too deep, it is impossible to find them and save the situation, which has led to the abundance.

Even the Soviet Union has more such cases than the United States.

There really is no way to get them out of the mountains and deep rivers, since there is another world in the dark of the sea.

After talking for a while, Ye Qing stood up and took the combustible ice samples to leave.

In this way, Ye Qing was not the same as when he came. Walking along the path strewn with plum blossoms, he quietly left school. After taking the first corner, the Lagonda roared and drove fast towards Longxitan Factory. Holding the wheel, he had a slightly excited expression.

Indeed ~ Monster Factory will not give away impossible tech projects. After a trip to his alma mater, he not only solved the combustible ice problem, but he also knew the way forward to obtaining military-grade plutonium.

To get combustible ice, you have to go directly to Antarctica for mining. Professor Cai Chenning told him that the combustible ice in Sample C was brought from extremely cold Antarctica by the research vessel Xuelong. Antarctica preserves the purest enormous resources of combustible ice due to its unique climatic conditions and combustible ice is directly sealed by the ice sheet on the surface, and it can be found by breaking the ice sheet. Unlike sea mining, it can only be carried very little by a drill bit at present.

As for nuclear weapons ~ Yes, Ye Qing decided to dive into the vast deep sea to recover the nuclear weapons that were lost by the United States and the Soviet Union, because there was military-grade plutonium there. A nuclear bomb contains at least five kilograms of military-grade plutonium, and its purity also meets the requirements for building energy towers. The United States and the Soviet Union do not have the technology to find and recover them, but he does.

The Lord’s Battleship is simply a tailor-made product for this plan. Even for mining combustible ice in Antarctica, it is considered the most suitable.

So the energy tower can be erected in the Longxitan factory and many more!

Ye Qing suddenly thought that the Monster Factory had been upgraded to the sixth level and of course the Lord’s Battleship had been upgraded to a new level as well.

Busy Ye Qing actually forgot watching the upgraded Lord’s Battleship.

Chapter 574: Going to Antarctica.

Busy with the problem of how to get the energy tower, Ye Qing actually forgot to look at the Lord's Battleship after its upgrade, suddenly he remembered that since the Monster Heavy industry has moved to step six then the Lord's Battleship is going to be automatically remodeled in the Monster Factory to accommodate this new level. So he wanted to see what he looked like.

Returning to Longxitan Beach, Ye Qing headed for the Barren Mountain where countless secrets were hidden. This barren mountain is crescent-shaped, just surrounding the central area of the entire Longxitan factory. But if you stand on top of this barren mountain and look at it, you'll see a barren crescent-shaped mountain, already surrounded by endless new factories.

In the Crescent Circle, only a few steel-framed buildings were built in three stages. These buildings are very small compared to the newly built factories in the distance. But that's the heart of Monster Heavy Industry, and it's also the anchor of Monster Heavy Industry early in its creation.

The original fence had been demolished. Ye Qing walked around the two iron trees dotted in the landscape, walked to the foot of the barren mountain, stood in front of the rugged stone wall, and gently slid over it with his fingers twice.

"Kacha ~"

After a slight mechanical movement sounded, the stone wall in front of him gently sagged, revealing a brightly lit modern passageway paved with wear-resistant green emery flooring. The air in the passage was cool, and it smelled a little of the sea.

When Ye Qing walked to the end of the passage, a huge space carved inside the mountain appeared in his field of vision. Above his head was a mountain with crisp lines and an alloy reinforced dome. Below his feet were steps. At the end of the steps was a deep, dark pool as wide as a basketball court.

It was the base's underground dock. Ye Qing pulled out the Monster Factory cell phone, took a deep breath, and chose to recruit the Lord's Battleship.

"Boom ~"

In the dark, deep pool, it looked like an ancient giant beast had appeared out of nowhere, the juggernaut fell into the water and set off huge waves. Ye Qing touched the salty seawater on his face and looked at the Lord's Battleship of the Sixth Stage with a stunned expression.

The Lord Duan Battleship plunged and floated up and down in the cold sea, unlike the heavy flat shape of the previous stage, but with a streamlined shape the ship was slightly narrower and the edge lines are drawn obliquely by compared to the stern.

The longer and taller Lord Duan Battleship, the wharf carved out by the angry miners could hardly hold its body. The four water-jet thrusters were also replaced with a propulsion device similar to a jet engine. According to the Monster Factory introduction, the Lord Duan Battleship of the sixth stage has a surface sea level of 150 knots and a deep-sea level of 80 knots. One hundred and fifty knots on the surface of the water is almost hovering, and it is impossible for ships on land to exceed that degree.

On closer inspection, Ye Qing's current Lord Duan Battleship on the sixth floor already had other propulsion technology. [Air cushion propulsion]. When the Lord Duan Battleship was sailing on the surface of the sea, compressed air is injected towards the bottom of the ship to form an air cushion

between the bottoms of the ship, so that the hull is raised to reduce the resistance of the surface of the water. Thus, the strength of the hull during navigation is greatly reduced, and high navigation can be achieved. This technology is not too complicated; many soldiers on board six boats used this technology. The most prominent representative is undoubtedly the largest bison in the world on 6 boats. But there is not a single type of embarkation on 6 boats that can reach 150 knots. In addition, the Lord Duan Battleship can be loaded with a thousand tons of cargo and ride like the wind on the waves and on the sea.

The lord's battleship returned from Nigeria a long time ago, and the diamonds that were brought back as well as the diamond reserves, after a very precise inventory, Ye Qing found that what he had was enough for about a month. With love and tenderness, he gently stroked the scarlet metal hull of the Lord Duan Battleship, that brand new battleship he had been eagerly awaiting.

The next day, Ye Qing returned to the company where he had been away for a few days. In the morning, he took care of the business of the company, and in the afternoon, from the office, he asked Kong Tao to contact the China Antarctic Scientific Research Station and ask them to pass on information. over Antarctica.

Monster Heavy Industry is today a leader in the manufacturing industry in China. It is not difficult to contact the Antarctic Scientific Research Station through the government. Of course, Ye Qing asked on behalf of the company to give him some information so that he could do some testing.

The mining of combustible ice must be kept a secret, otherwise, members of scientific expedition teams around the world will know that the Monster Heavy Industry possessed a warship far from land that could both dive and roll on ice to getting to these places. So don't wake the bear from its sleep!

.....

It is much more reasonable for companies to know the working conditions under which their products will perform especially in extreme natural conditions, indeed many companies do.

.....

After receiving the request from Monster Heavy Industry, the research station was not stingy and gathered all the environmental, climatic, and geographic data of Antarctica, they also invited Monster Heavy Industry to take a research vessel to Antarctica in December at the end of the year, because December is when Antarctica is most relaxed, if they come now, they think that not only the material cannot be transported, but also the technicians who accompanied it.

Antarctica is divided into two seasons: cold and hot every year. The cold season is from April to October, and the hot season is from November to March of the following year. It's time to enter the cold season, even members of the expedition team who are used to staying in Antarctica all the time chose to nest in the research station and avoided going out as much as possible.

With the Lord Duan Battleship, Ye Qing didn't need to plan too much. He just had to watch out for the personnel of the science expedition teams and avoid them taking advantage of the cold and bringing enough food at the same time. He's going to make this trip to Antarctica in person because the Lord Duan Battleship can only be driven by him alone. He could navigate it remotely through the Monster Factory cell phone, and after programming it to Antarctica Mining, Ye Qing had to focus on the

operation from start to finish, but Ye Qing preferred that they went together, because it is more effective. In addition, he wanted to see the legendary Antarctica he had dreamed of for quite some time. Discover the magnificent vision brought by nature.

.....

After two days of preparation, Ye Qing carried many supplies, and bring with him Juli and Niu Yi, the two great Monster Labors, also Qiao the Master Craftsman, and boarded the Lord Duan Battleship, preparing to go out to sea in secret.

In the sixth stage, the Lord Duan Battleship had a cockpit measuring tens of square meters and had six passenger seats. There was also an independent captain's lounge behind the cabin. As much as the living facilities can be imagined in it, there are no better and more advanced facilities than those here.

This luxury pleasure of life is also one of Ye Qing's motivations for visiting Antarctica, sitting in the temperature-controlled Lord Duan Battleship, shirtless, smiling at the ice and snow outside the porthole, the wind rages. This feeling is certainly nicer than going to any tourist attraction.

Before boarding the Lord Duan Battleship equipped with satellite communication equipment to go to Antarctica, Ye Qing did not forget to take with him special winter clothes from Ushidun, warm boots with electric heating, windshields, high vodka, whiskey, hot knives, chilled vegetables, steak, various types of meats, noodles, dumplings, etc. ~ The cockpit and living cabin was filled with living supplies, and even the three monsters brought a full set of cold-resistant clothing.

At nine o'clock in the evening, Ye Qing sat down in the Lord Duan Battleship, gently depressed the joystick, and plunged into the vast sea. Antarctica is 12,000 kilometers from China, and the Lord Duan Battleship has sailed looking forward to the sea, and it only took him forty-three hours to reach it.

Of course, the actual time to get there is shorter, as it moved south from the Yellow Sea and skirted the Pacific Ocean across the Tasman Sea between Australia and New Zealand, then arrived at Cape Goodenough in Antarctica. The whole route he had added to the actual route was over a thousand kilometers to avoid the South Ocean countries and Australia blocking the road.

Chapter 575: Storm Snow.

Under the cover of night, the Lord Duan Battleship blew long waves on the sea and rushed towards the limitless sea with a speed of one hundred and fifty knots, which is nearly three hundred kilometers per hour.

Sitting in the cockpit, Ye Qing can only detect slight twists and the roar of waves blown away by drafts.

By daylight, the Lord Duan Battleship had left the East China Sea and galloped across the Pacific Ocean without limits. This distance to be traveled is fully automatic, and the Master Craftsman was only responsible for monitoring the wind. As to whether anyone will see a large yacht galloping across the water, which was not a question for Ye Qing to consider. That's why he worked the internet all day and rested at night.

On the second day, the Lord Duan Battleship had rounded Australia and reached the sea off Antarctica. The temperature in the cockpit was 24 degrees and the outside temperature was minus 16 degrees. By

this time there were already large icebergs floating in the sea. Occasionally the Lord Duan Battleship galloped towards the white ice on the sea surface, causing it to explode with friction noises.

In the afternoon, the pearls of icebergs disappeared from the sea. Instead, there was a beautiful image of endless white ice. The Lord Duan Battleship climbed onto the ice and relied on four jet thrusters that projected compressed air pushing it forward.

Antarctica was very calm unlike other continents, the sea was frozen and the jet thrusters blew shallow snowflakes across the ice, like a white crazy dragon dancing on the ice. At that time, the temperature was 20 degrees below zero, and Ye Qing played rousing music, according to the locations of scientific research stations of various countries shown on the electronic map and chose the most hidden route to disembark at the locality NB 6.

He didn't know how long he had been walking, and the white, silent world before him has vaguely undulating outlines. It is impossible for the ice sheet to have wavy contours, which means that it has arrived at the locality NB 6.

When he was several kilometers from the seawater, Ye Qing's spirit arose, he abruptly swung the tail of the Lord Duan Battleship causing it to drift and drew a huge arc on the ice then stopped it in front of a raised ice boulder, positioned a beacon indicating the location following the electronic map, then switched the operating devices.

From the outside, anyone who could see it could see that this large yacht, who strangely sped over the ice, suddenly seemed to have a spirit in it. From deep within, a giant steel beast emerged, with a pointed forefoot outstretched and two mechanical arms fitted with sharp scissors.

Under Ye Qing's control, the two mechanical arms produced the "duh ~" sound like a pickaxe and shattered all the surrounding ice. When the surface of the ice shattered nature's Lord Duan Battleship fell into the ice cave.

Two minutes later, the Lord Duan Battleship, after hiding its camouflage hull, crawled out of the nearly two-meter-thick ice cave, and then used four giant steel feet to climb up to the locality NB 6. It was Cape Goodenough, named after an explorer who entered Antarctica.

Of course, this great explorer's trip to the South Pole was not wonderful. Hundreds of years ago, for lack of protective gear against the cold, he wore wool-felt boots and was frozen in the company of his other companion. They were still sleeping in Antarctica.

With all the blessings of technology, Ye Qing can now enjoy the spirits and enjoy the scenery outside the window in just one layer.

The scarlet shell was extremely visible when exposed to the white world, so Ye Qing waited after climbing to the top of the NB 6 location. He and the monsters put on thick winter clothes, then opened the hatch.

"I ~ count on ~ ah!"

The moment the hatch opened, the enormous temperature difference gave Ye Qing the illusion of falling into the pool of liquid hydrogen a few hundred degrees below zero. The warm air in the cabin was

instantly blown away by the strong wind, and the original calm environment was replaced by the terrifying howl of the wind.

Cruel nature taught him a lesson. Originally he didn't want to stay in the hot and quiet cockpit, watch the wind with snowflakes pass through the window but as soon as he opened the hatch the Antarctic gave him the illusion that he was nothing more than a globe of ice and felt his blood clot and his breathing immediately froze. The outside temperature was minus 34 degrees, and there were eight levels of wind.

Ye Qing closed the hatch with a "bang ~". Of course, the others did not sit idly by either. The two tall Monsters Juli and Niu Yi with blue faces had walked into the strong wind and pulled pure white camouflage netting from the hold. They seemed to consider the gusts of wind and extreme cold like nothing, and they just covered the Lord Duan Battleship with camouflage netting against the strong wind. Suddenly the cold scarlet shell disappeared and the Lord Duan Battleship merged with the pure white ground. And now it's time to go ahead; they would need to determine the location of the combustible ice indicated on the electronic board.

.....

Without the information from the Antarctic Science Expedition team, who would have imagined that the extreme cold of Antarctica in the arid lands would in fact store the world's most abundant combustible ice resources?

The combustible ice mine buried in the ice is more than a hundred kilometers from the surface. Similarly, the Chinese scientific research station stationed in Antarctica is more than 100 kilometers from this place; this station was established by a team of investigators from the city of Zhongshan. During the hot season three years ago, investigators from Zhongshan Station showed the place by mapping the land. The inspector from Zhongshan Station accidentally discovered this place while surveying the land.

Along the way, when the Lord Duan Battleship encountered rolling mountains, it would make detours or climb, and when it encountered flat terrain, it would put its propeller in motion and glide across the snow.

It was already one in the morning, and the sun was resting in the air, and yet it was still a little dark in here. Upon reaching the map area, Ye Qing realized there was an invisible plain of ice and snow. Using a mechanical arm to sweep the snow across the plain, he suddenly discovered another transparent frozen world beneath the ice cap. With a little light blue, countless bubbles are eternally frozen there. There is also the wave pattern formed for unknown reasons, which seems to silently tell the beauty that was only theirs. This is all combustible ice, compared to combustible ice buried in permafrost and seabed several hundred meters deep, it is almost within reach. Of course, the harsh natural environment cuts its tracks to everyone.

Now Ye Qing has come with the Lord Duan Battleship, seeking a position on board. The Lord Duan Battleship again reached out the mechanical arm, activated the high-powered laser cutting machine, and cut a circle on the ice with a tilt like a cone. As the burning laser passed, the ice sheet was carefully cut, but when another mechanical arm lifted the enormous ice cone, the combustible ice below burst into a blue flame.

Ye Qing had anticipated this situation from the start. He predicted the combustible ice would act only shortly after it had come into contact with air so that the combustion would not be violent. The laser turned it on, and the lid was able to cover it and turn it off again. After extinguishing the fire germs, he thought of another technique, the frame of the mechanical arm was replaced with a wheel cutter, and the high-rotating wheel, having the size of a cubic meter had carefully cut a piece of combustible ice from the inside.

Enriched, transparent combustible gas was slowly escaping from the temporary mine, and each time a piece was cut, the mechanical arm would sandwich it and send it to the hold of the Lord Duan battleship.

One cubic meter of water equals one ton, and since combustible ice weighs about the same weight, Ye Qing must therefore cut at least 1,000 pieces. Without any warning beforehand, the roaring wind outside the porthole gradually ceased, and just when Ye Qing thought it was sunny, a feather-shaped snowflake swirled and fell in front of his eyes.

One-piece, two pieces, countless pieces, the snow was getting bigger and bigger. When Ye Qing counted the 200th track, the thick goose-feather snow turned into a slap, and the disappearing wind roared again.

The whole world was white, and even though he was less than ten meters from the porthole, Ye Qing couldn't see the appearance of the robotic arm at all, let alone the combustible ice cutter, the outside temperature dropped sharply to minus 39 degrees, and there was also blade-shaped ice ballast in the snowflakes, rustling against the window.

This kind of extreme weather, if encountered by members of the scientific expedition marching on foot, I'm afraid the whole army will eventually be overthrown. If he hadn't come to Antarctica, Ye Qing would have lived another 300 years and could never see such a shocking natural scene.

Okay ~

Since he couldn't cut the combustible ice and get it, then why not enjoy the snow while baking. Ye Qing, wearing only one shirt, stood up and walked to the kitchen.

Chapter 576: Smooth return.

The blizzard lasted for five hours and when it came to a stop the Lord's Duan Battleship was half-buried in snow, and when it was all over Ye Qing gazed at this kind of scenery for a while, looking across the porthole, and found that the world was out of contour and that there was no sign of orientation in this wonderful landscape, then he activated the propeller of the Lord's Duan Battleship to blow out the surrounding snow several meters thick, again exposing the combustible ice buried below, then continued its work.

In the sixth stage, the volume of the Lord's Duan Battleship Warehouse is one thousand cubic meters, and it can carry one thousand tons. It can also be seen from here that the Lord's Duan is huge because if a thousand cubic meters are deposited in a cubic-shaped warehouse, it will have a huge volume of ten meters in length, width, and height.

There is no night here in Antarctica, and Ye Qing, who has immersed himself in his work, has not been able to notice the passage of time. Twenty-two hours had passed manipulating the two multifunctional

robotic arms to slice up 1,000 cubic meters of combustible ice and place them carefully in the cargo hold.

When Ye Qing turned around to return to Shanghai, the Lord's Duan Battleship left a trail that looked like a dragon walking through ice and snow. He doesn't have to worry about these tracks, the strong wind and snow will bury the tracks in less than two hours.

When the Lord's Duan Battleship put back her camouflage hull and plunged into the sea to sail, Ye Qing had nothing more to do, as he could let the Lord's Duan Battleship sail automatically. He headed to the living room to rest but didn't feel too drowsy, so he lay down on the bed.

At this time, the satellite signal receiver which was based outside emitted intermittent signals. There may be no satellite network coverage over the South Pole. Having nothing to do, Ye Qing used his laptop to open an electronic card. This map is a mosaic map of the world map; its content is very simple. It only contained the names of the seven continents and sea areas, no country names, but it did contain additional markings that are not available on regular maps i.e. eight nuclear bomb marks, they are located in the waters surrounding the United States, as well as the Mediterranean, Atlantic and Pacific, among those eight signs are the first lost United States B47 bomber since 1956, which was lost in the vast sea due to a plane breakdown and a lost submarine during the period of the 80s where it has been planted in the Mediterranean Sea since the year 1980.

According to declassified US official documents Ye Qing recently inquired about, there has been 32 "broken arrow," accidents reported by US officials in the past 20 years, most of which were bomber accidents carrying nuclear bombs. Of course, most of the nuclear bombs were found.

The eight sea zones shown on the map now contained nuclear bombs which cannot be recovered due to uncertain locations and too deep water. In addition, over time, these long-lost nuclear bombs were submerged by seabed dust raised by ocean currents, and the United States abandoned the search altogether. It can also be inferred that the United States was so powerful during the Cold War that eight nuclear bombs were left at sea.

If Professor Cai hadn't told Ye Qing these things, he wouldn't have sought to find this official information, and he wouldn't believe this sort of thing existed.

After carefully studying this data, Ye Qing first decided to target the nuclear bomb carried by a 'Douglas A-4 Skyhawk' attack aircraft based on an aircraft carrier that crashed in the Pacific in 1965, it is located in a deep submarine depression more than 300 kilometers from the island of Okinawa, it is one of a series of Sea of Japan depressions stretching from the Thousand Islands Trench to the Mariana Trench via the Ogasawara Trench. . The water depth at the crash site was close to 5,000 meters, and the locating range was small.

In the Dark Trench, the traces of the Lord's Duan Battleship could also be perfectly hidden. Of course, the Lord's Duan Battleship couldn't dive to that depth. In the sixth stage, its maximum diving depth is only one kilometer. For this, Ye Qing must build a set of deep submersibles capable of withstanding high-pressure seawater and highly technologically advanced research equipment. In fact, Monster Factory has already given a solution to this seemingly impossible task.

Two days later, the Lord's Duan Battleship returned to the Longxitan factory in a calm and serene manner. Combustible ice that was sealed in the cargo hold was immediately transferred to dozens of cold stores for sealed storage.

Now that the combustible ice is available, Ye Qing has also asked the company to start manufacturing the remaining materials. These high-purity metals cannot be purchased, and factories melt them themselves.

As long as military-grade plutonium is available, energy towers can be erected in factories.

.....

After nearly a week of isolation, Ye Qing felt he wanted to find someone to talk to and chat with. This kind of feeling intensified after spending an overnight meeting with Hardware Masters and Master Metal Experts to discuss the submarine submersible project. While the monsters can chat as well, they've only been of great interest to the machine industry.

.....

For example, to withstand the pressure of seawater at a depth of 5,000 to 6,000 meters, Ye Qing and they discussed making the hull of the submersible in a spherical shape, to design a model that can withstand tremendous pressures.

You should know that each time it dives to a depth of one kilometer, the submersible must withstand a pressure of one thousand tons per square meter on the outer hull, which gives, at a depth of 5,000 meters, and this pressure will reach 5,000 tones.

What is this notion?

To use a popular analogy, a five thousand ton forging machine constantly hits a car. If you can find the hull material that keeps the car from warping, you will have the skills to make this kind of deep submersible.

In the eyes of outsiders, it can be a normal meeting for the president to bring in engineers to discuss product solutions. But in Ye Qing's eyes; they are none other than monsters hidden under overalls for disguise, they have long horns, like monsters out of darkness and savagery, it sounds pleasing to the eye, but Ye Qing is a human being, who stayed with them for a week, alone.

.....

So when the lanterns were lit and the shining moon hung in the sky, Ye Qing changed into a casual jacket, adjusted the data glasses to a lighter color, and drove the Mercedes-Benz G 65 through the streets. The G 65 is a high-powered, muscular car, commonly referred to as the Big G on the Internet, and is very popular among young men.

Of course, Ye Qing did not leave aimlessly. He walked down Huanhai Avenue to the city. After walking a few blocks, he parked the car near the family building of the Chengxi Industrial and Commercial Bank. Rolling down the car window and playing soft music, Ye Qing was about to wait for someone to go to dinner together.

The cool car and the handsome man in the car, the combination of the two pieces, can attract the attention of the opposite sex a lot. No, within a minute of his stop, there was a girl who was dressed in a bit of bright color and whose appearance was about six and a half minutes away.

.....

Some drunken people didn't want to walk to ask for directions while intoxicated.

.....

"Handsome dude, may I ask where there is a clinic nearby. My heart is beating a bit fast and I hardly can breathe," The girl gently held the Big G's rearview mirror, posing a soft, weak gaze.

"I don't know him. You can use your cell phone to find him on the map," Ye Qing raised an imperceptible proud smile at the corner of his mouth in front of her.

The girl in front of him, if she was in college like this, might find someone who values her feminine flower and so on, and might get the attention of many male colleagues who will compete against each other to show their courtesy.

"I... My phone has run out of power. Can you find a clinic for me using your phone?"

"Turn left. There's a clinic in the alley."

Dressed in a small brown leather jacket, the girl had a feminine look and charm, her skin was fair remained standing motionless next to the car with a smile.

"What is it, ma'am, are you uncomfortable?"

"No... No..." The girl who started the conversation took two steps back then blushed and left.

"She said her heart rate was fast, and she couldn't breathe." Ye Qing suppressed a smile, perhaps because of his eloquence.

The clothes she wore today suited her very well. They were all youth, sport, and leisure styles.

"Brother Ye, when people see you, their heartbeat would increase." Bai Douer playfully stuck his tongue out at Ye Qing through the car window.

"Get in the car, and your brother will take you to a big meal." Ye Qing patted the car door.

After getting into the car and closing the door, Ye Qing also lifted the window and was about to ask Doudou what she wanted to recommend, but she made a hissing gesture and then gave him a hug with soft music accompaniment.

Chapter 577: A suspicious looking person.

"Brother Ye, I miss you so much."

Bai Douer gently rested his cheek on Ye Qing's shoulder as he put his hand into her show, gently circling her.

“Well ~ the company’s new cell phones are on the market, and the factory is also doing everything it can to tame the markets for this product. I’ve been too busy lately.”

The atmosphere in the car was particularly warm and Ye Qing, very stressed out before, suddenly felt relieved.

“By the way, how do you use the Magic Crystal phone?” Ye Qing said, smelling the light scent on the girl’s body.

“Alright, the operating system has been used so far, and there hasn’t been a crash. The hardware is also particularly good. The fingerprint unlocks, and three-dimensional camera functions are particularly keen on my colleagues several of them are planning to change their cell phones ~ By the way, Big Brother Ye, I think it is possible to add the Magic Crystal cell phone connection function to the next generation of ionization purifiers. In this way, consumers can understand their skin problems more intuitively from the mobile phone, and it is also an easy operation interface.”

“It’s a good idea, and I’ll take it into account,” Ye Qing smiled, then rewarded her with a kiss.

“Uh ~”

Bai Douer was caught off guard by the kiss and unconsciously hugged Ye Qing. Seconds later, her slender hands could no longer use her strength and she could only let Ye Qing control her the whole way.

The black Mercedes-Benz G 65 finally pulled up on a street near the sidewalk, and Ye Qing and Doudou after getting out of the car headed for a newly opened snack bar.

“I said I would buy you a big meal, and I’m a fan of the delicacies of the mountain and the sea. I really didn’t come to this clean and distinctive snack bar just to enjoy the snacks and the delicacies. The most important thing is to choose places to eat, which are all very delicious.

Bai Douer loved food, she was so thin that even every woman in this snack bar looks at her every now and then with envy and jealousy. Ye Qing couldn’t quite describe the feeling that swelled inside him. Bai Douer’s body curve was perfect; she belonged to the genre that is very hot and criminal. The curvaceous curves appealed to the kind of men who saw them, like the kind who couldn’t help but hold her arms in her arms and take good care of her.

Both are equally perfect, but they have completely different styles. Of course, it’s eye-catching. Ye Qing and Doudou sat down to order something to eat, and no one dared to strike up a conversation and they ordered two very distinctive braised boiling points, a lump of steamed meat, a platter of rice with leaves of lotus. Hungry Ye Qing took the lead to start.

While eating delicious food, he looked at Bai Douer. The latter was very cute when she ate, and she made small bites, which easily reminded everyone of the word “Girly”. I’m afraid that’s also why she was so popular when she did cooking shows on Douyu. After all, there are as many food programs as there are stars, but no one is half the popularity of Bai Douer. Ye Qing, who was eating, looked at her but he did not see her, his mind was elsewhere, he thought of other places.

As the saying goes; what about staying warm.

Ye Qing leaned forward, thinking about this, and quietly said a word in Bai Douer's ear. Suddenly her white cheeks turned red and the chopsticks in her hands were nowhere to be placed. In her autumn eyes, there were a certain tension and a certain will. Finally, she did not dare to look at him, so she lowered her head.

"You ~ Brother Ye, wait ~ Wait until next time. I'm looking for an opportunity and telling my family to go on a business trip, and then ~"

"My family knows that I ~ I ~ I'll call to ask ~"

"OK!"

Ye Qing also blushed a little, but luckily she didn't dare look at him at the time.

Both were only at the last stage. Originally, Ye Qing wanted to wait for a natural opportunity. However, after waiting a few months, he was as busy as the President of the Republic and couldn't wait for another opportunity. No way to wait any longer, he, as a man, had to take the initiative to mention it.

"Well ~ Then I will find the director. I will ask him to give me a day off," Bai Douer should also take care of her career, but for the people who have room in her heart and that she likes, his career may be postponed.

.....

The good times always pass quickly. After eating the snacks, she took Ye Qing to the mall across the street and helped him pick out some casual spring styles that matched her image. He too helped her choose some for him based on his own aesthetic.

How does it feel to be a young billionaire?

Not as over the top as in the TV series.

All of the clothes that have been fingered are wrapped, which the clothing store owner can do. But buying things without looking at the price tags is a very refreshing experience. Whatever the brand, as long as it pleases the eyes, even if it is a mammoth dug in the permafrost in Siberia, or leather clothes, as long as they dare to sell, Ye Qing dares to say: "I'll buy it."

There are also some wealthy people I know who recommend custom models to Ye Qing, but shopping is kind of a pleasant pleasure. Therefore, Ye Qing only buys custom-made formal wear for work and everyday wear.

While shopping, Bai Douer's mother who noticed her daughter's delay called her and asked her why she hadn't come home, and Ye Qing drove her home.

When they got to the unit where Bai Douer was staying, she blushed and closed her eyes. Ye Qing had a tacit understanding of Bai Douer's ecstasy when stopping the car, and as the car's lights are dimmed so that the interior cannot be seen from the outside, he turned to the side and kissed her. Maybe that was the reason she had accepted this thing. This kiss made her particularly emotional. When she got to the end of the kiss, she started holding onto him even more and put her arms around his neck.

At this moment, Ye Qing almost couldn't control himself. It had to change the environment. Even though it wasn't in his house, he had to pull out his gun and used it anyway.

Once the hugs were over, it took several minutes to calm down before the flushed face recovered.

.....

As she left, Ye Qing's "Jingle Bell ~" phone rang. While it wasn't an interruption of the facts during doing this sort of thing, it made him very angry, and when he looked at the number he lost his temper.

The call was from the Master Craftsman at the factory, and making that call must indicate something is going on in the factory.

"Hey ~" Ye Qing rolled down the window and said goodbye to Bai Douer. As she waved, she kissed him again from a distance.

"Boss, when we were monitoring the equipment on the outskirts of the factory, using surveillance equipment, we saw a very suspicious stranger outside the factory he was following a trail in a very strange line," Over the phone, Master Qiao said in a very calm voice: "Boss, do you want this man arrested and tortured? "

"Acting strangely? Suspect? Where is he?" Ye Qing was a little surprised.

"Outside of the East Factory fence, it looks like he won't be leaving for a while."

"Well, I'll go back immediately. If he intends to leave before I get there, then you arrest him. Stop him," Ye Qing cut the ignition and kicked the chair of the car in front of him.

At night, a stranger came from outside to the factory!?

In this case, even if the stranger does nothing. It's also deeply suspect: there are no nearby inhabitants other than the factory in the arid mountains and ridges of Longxitan Beach. At this point, under cover of night to get to the other side of the wall, most likely you are interested in the factory.

More than twenty minutes later, the Mercedes-Benz G 65 arrived at the factory. There was occasional traffic on Huanhai Avenue, and the factory area is large enough that the stranger could squeeze into a corner without noticing him.

Ye Qing got out of the car and went straight to the surveillance room, where there was footage recorded from surveillance cameras hidden all over Longxitan Beach.

Chapter 578: Who are you?

The Longxitan factory seemed deserted, but in its stones, there were a few low light color cameras very discreetly placed, which could clearly observe the intruders lurking around the factory at night, they were also equipped with a sensor. of vibrations in the form of rock, monitoring every movement around the plant in all directions. With these different methods of surveillance, Ye Qing was ready for such a day.

The original factory did not have as much surveillance equipment, but since the theft of the Daimeng Jewelry Company and the theft of the precision instrument manufacturing company, large companies

across the province of Jiangnan knew they were under threat from a very powerful enemy and desperately improved the security measures. The same goes for Monster Heavy Industry, where company and factory safety equipment have been upgraded three times.

Ye Qing quickly walked into the main factory monitoring room, where there was a huge, half-curved dream monitor and was stuck in the hall. On this dream monitor, there were two hundred small images on the screen and a single main image in the middle. Dynamic image captures software produced by Tianjin was installed in the surveillance equipment that was not connected to the external network. If there is wind and grass moving in any area of the screen, the image of that location will immediately switch to the main image and the location will be marked with a red circle on the electronic map is broken down into segments of places.

The anomaly was in the area numbered D 53. It was outside the plant fence. There was a foreign man wearing a black jacket with a shoulder bag. He's already crossed the fence by this time, like a ghost, hiding his figure behind a stone, and heading towards the factory in front of him.

When Ye Qing hurried on the road, this person was only acting suspiciously, and now he has started to invade the factory. According to the screen reading, this person first walked from Huanhai Avenue. At first, he groped to the deserted beach in the dark, and then his figure shone under the fence at the edge of the factory. The factory fence is a two-meter high concrete wall with a steel mesh fence above it. The stranger curled up in a corner for dozens of minutes, during which he pulled a pair of sunglasses out of his backpack and put them over his eyes, looking around and at the wall.

This man was not blind, and yet he wears sunglasses at night, so there is only one logical explanation. He uses optical instruments to observe if there is an infrared alarm system that cannot be seen with the naked eye on the fence.

.....

It is the kind of infrared alarm device that often appears in movies. A spy or thief carries a spectrometer, or grabs a handful of flour and sprinkles it in the air, and then there will immediately be a red light sweeping all around.

.....

Confirming that there is no such equipment, his monkey figure paused, scaled the wall flexibly after two approaching steps, landed quietly and quickly, and quickly ducked behind a large boulder.

He took out equipment similar to a flashlight but was not a flashlight at all. He lifted it up in different directions and flipped the switch as if taking a picture. After taking a bunch of photos, he groped his way towards the heart of the factory. Using the cover of the stone and the factory, the observation equipment was changed from time to time with other equipment of different shapes and reached the high place of the factory.

A magical scene was born, none of the first-generation cameras installed high up captured the silhouette of the man. He seemed to have disappeared from surveillance, only occasionally hidden behind the rock. A camera hidden on the landscape tree was able to intermittently capture its silhouette. His concealed professional posture and highly professional actions can hardly help but leave people thinking of the ninjas of [Koga Ninfa Tie].

“Brilliant, high-tech combined with positioning,” Ye Qing rushed behind Qiao impatiently and greeted him: “Call the security team, tell them to go and capture him.”

Two all-terrain vehicles, Polaris Razor were quickly activated, and at the same time, on the top of the barren mountain, the searchlights were turned on and adjusted to the intruder’s position quietly. Four Monster Labors rushed into the all-terrain vehicles, and the roar of motivation mingled with the operation of large equipment in the factory.

But Ye Qing didn’t underestimate the alertness and hearing of the foreign man. When all-terrain vehicles had just rushed out of the central area of the factory. In the surveillance room, he saw the intruder had originally planned to flash behind another obstacle, but suddenly he stopped and turned his head to look into the distance. The next moment he bounced back and erupted like a sprinter, sprinting towards the wall.

“Kang-kang-kang ~”

High-powered searchlights atop the barren mountain hit him at the feet of his savage run, clearly pulling him out of the darkness.

If you want to put ordinary people in his place, they must have panicked under these circumstances and will go looking for shelter at this time. But he did not do it. He didn’t look back. He walked through the outermost factory building between a few lightning bolts, less than two hundred yards from the perimeter wall. By this time, all-terrain vehicles, which were advancing with bright lights, had already appeared behind him.

“Hoo ~”

The two Monster Labor who weren’t driving the cars, sat behind and screamed strangely, slapping their chests with their hands, their eyes bloodthirsty and excited. Maybe that sort of thing is easier to get them excited about than industrial work.

The one who fled was taken aback, and the roar behind him was deafening as if it came from a beast. At that moment, he gritted his teeth and worked his way up the level of the leak higher, getting closer and closer to the wall. He walked over to the steel chain-link fence above, leaping forward and leaping over the wall with agility.

At that moment, he turned and looked back, preparing to give the pursuers a dashing background, then quietly leave. As a result, when he turned his head he saw a terrifying scene. The two all-terrain vehicles made a loud braking noise that made him look brooding, and they pulled over to the corner of the wall and four muscular men with looks like bulls and pagodas showed hideous and cruel faces. in the spotlight, and jumped over the two-meter-high steel mesh wall.

With this inhuman leap ability, the alien frightened and squirmed, accelerating faster than before. However, the four muscular men were faster and more agile than him. In less than five seconds, they appeared in front of him. Without running twenty paces, the stranger who could participate in the city running competition was surrounded by Monster Labors.

“Damn it!”

The intruder shouted out of breath, then rolled up his shirt and tried to punch the man closest to him hard with his fist.

“Vroom ~”

His fist missed the mark because the strong man was faster than him, and with his hard, thick arms knocked him to the ground like a slot machine.

“This ~ impossible ~” then, with intense pain, his consciousness plunged into darkness.

.....

.....

When he woke up again, Wien Wright found he was fixed on a chair. There seemed to be a firecracker in his head, pain and confusion were constantly fighting, and the left half of his face passed out. He wanted to make a sound, but my tongue didn't respond, so he could only hum syllables he didn't understand. Her eyes were also blurry, and it took a lot of effort before she could see her situation clearly. He was in an airtight room, and he was sitting on a metal chair, and his hands were cuffed by two things that looked like some sort of mechanical slot. The backpack he was carrying with him was resting on a metal table in front of him at the time. All the objects were scattered. Two Chinese men in white coats were studying the equipment in the backpack with their faces flat.

“Who are you?”

Behind Wien Wright a serious questioning voice arose.

Chapter 579: How to make a spy speak, is urgent.

“Who am I?” Wayne Wright's brain was dizzy, and he worked hard for a long time before finally remembering the temporary blanket status he had disguised himself in before leaving.

“I...”

“I'm a reporter, and I'm a French reporter,” Wayne Wright said vaguely.

“Reporter?” Ye Qing laughed and placed in front of Wayne Wright the two pieces of observation equipment he was wearing while saying: “An instrument used to observe infrared rays and a filter used to observe the light source of the equipment. There are also low-light color cameras, pinhole probes. With this mess, eavesdropping, interference, and unlocks, and you tell me, you are a journalist.”

“There's my press card in the bag. I'm from France, A reporter from the international TV station, I came to the factory to film reports without your permission. It was my fault,” Wayne Wright's thoughts gradually became clearer, but his speech was always very laborious.

“You are going to be guilty of assault and illegal detention. I am a foreigner. You know what the consequences of moving a foreigner to China are.”

“What is it?” Ye Qing looked at him with interest.

“Foreigners in China are focused on taking care of themselves. If something bad happens with them, it will be a major event. I am still a foreign journalist. You will wait until the next day to deal with the

reports international public opinion and the responsibility of your Chinese government,” Wayne Wright insisted he was a journalist, and a sneer appeared in his right eye: “I am here in a legal way, I have input and output records...”

Before he could say anything, the cold-faced man to the side put something on his chest. Suddenly, Wayne Wright felt a terrifying current flow through his body, as if he had been struck by lightning.

“This person is dishonest, play with him for a few hours,” Ye Qing waved his hand and left the room with the equipment recovered from Wayne Wright, and went to the Monster Industrial Building and handed over the devices with units of storage in Tianjin to inspect them before breaking them. As a result, after connecting the circuit and testing them, he told Ye Qing that these devices are all encrypted by complex technological encryption.

“This is the PKI system encryption algorithm whose decryption password to read the file is on a separate device. Of course, decryption is no problem. No matter how complex the word is. The password will be decrypted by the hardware. Now the device is in my hands. After an hour, after decryption the content will be known, I will deduct some diamonds from the boss.”

Tianjin has proven his pride with his actions. With the help of the top-level server cluster, it only took 37 minutes to find out the content. Among them were only two valuable storage units, one of the low-light cameras and the other of the smart watch he was wearing.

There were not only a number of photos of the Longxitan factory just taken, but also a large number of internal photos of another well-known company in China. The photos were varied, from the equipment to the assembly lines to the entire data file.

In the smart watch, there was an action guide for the Monster Heavy Factory. I don’t know, if Ye Qing was shocked at the first glance, he could guarantee that in the factory, apart from a few transit zones open to the outside world, no stranger ever entered. The actionable guide clearly listed a vague electronic board from the Monster Heavy Industry factory.

The location of the office, the production plant of each product, and several factories in the central area which is listed as key areas, in the action guide, it is very clear that he should be allowed to photograph the internal details of these core areas and production lines inside the factory, several workshops in the central area were slapped with a large question mark. It seems that the other party did not understand what these workshops were producing.

“We don’t have much time left,” Ye Qing looked at the time on his wrist and said solemnly, “This person has a very high degree of professionalism. Even though he is a spy, he is the kind of veteran spy. He has no external communications equipment, so his companions will not be sure he was arrested before dawn.”

Across the plant, Wayne Wright has been electrified for an hour, and he has yet to speak.

“Is it true that, like in the movies, the spies are determined not to speak and would rather die than speak?”

“He’s undead, how do you know that?” Tianjin asked curiously.

.....

Wayne Wright was already numb, the brain's protective mechanism turned on; leaving him in a semi-conscious state, the man with the cold face, when he shocked him again he could only hum a few words, shaking twice to show he was still alive.

No matter what the interviewer does, Wayne Wright is professionally trained in interviewing. Also, Monster Heavy Factory is only a private company; they cannot kill or burn it. It gives him a hundred courage, so that he is unafraid of being killed and as long as he can resist until the appointed time, at five o'clock in the morning, his companions will know that his action has failed and will begin the rescue procedure.

However, Wayne Wright must have admired the courage of this enterprise because when he caught the spy, it did not turn him over to the government, but proceeded to torture him. What an arrogant company, how could such low electrocution let him speak?

This company could be satisfied with withdrawing these devices. They don't have a special reading device to see what's in there. Give them a month, and they will never be able to decipher the data inside.

After being electrocuted again, Wayne Wright estimated that he had waited five minutes and had not received the next electric shock. Opening his eyes with difficulty and doubt, he realized he didn't know when there was an old man in the closed room. He was very short, slightly arched, with a mischievous smile on his face, fiddling with something on the metal table.

"Have a look at this report," The little old man gave the man he called a piece of information.

When the report was placed in front of Wayne Wright's eyes, his unharmed eye instantly dilated the pupil.

"It's impossible!"

The information was printed along with the action guide that it had stored in the smart watch.

"How did they decipher it?"

Before Wayne Wright could figure it out, the old man smiled and waved, dismissing the two people who were in the room. Without a doubt, he could also clearly see what the little old man was playing with on the table.

It was something similar to a crossbow arrow, with an extremely simple shape and a new metallic sheen on the surface. A thick arrow of chopsticks was placed by him on a temporarily treated crossbow, and the thick spring of the thumb had been coiled. Then the Master Craftsman took the crossbow and stood and walked past Wayne Wright.

"Did you see the button above?" The Master Craftsman smiles unchanged: "I used a mechanical timer instead of the trigger. I'll show you the effect of ten-second timing."

Turning the knob looks like winding a clock. There was a sound, and then a blinking arrow pointed at Wayne Wright.

“Click, click, click ~” Ten seconds later, the crossbow in the little old man’s hand instantly burst. Under Wayne Wright’s horrified gaze, the arrow slid past his armpit and latched onto the back of the metal chair. He was stunned, staring at his intact arm, if he was just a little short...

“I’m only asking you one last time. You have to think carefully before answering my question. Don’t let yourself be seen for a moment of excitement. You won’t see the sun the next day,” The crossbow was rewound, and this time it was placed on a shelf three feet in front of Wayne Wright, and the arrow was aimed at his heart position.

“Who sent you here, and what is the purpose of coming here?” After speaking, the Master Craftsman turned the exquisite mechanical knob again.

“Twenty seconds, as you can see, it is just a crossbow with a very simple mechanical structure. It cannot be remotely controlled and does not need to be connected to electricity. Don’t take a chance we’ll stop it from a distance.”

Wayne Wright instantly woke up. Now, panting heavily, her face is full of cold sweat, and her eyelids sparkle and sparkle. The little old man, after placing the crossbow, ran to the corner of the wall and looked at him with a smile on his arm.

“Click, click, click ~” Wayne Wright’s ears were filled with the sound of the strings of a clock, and he was twenty seconds old.

“That must scare me!” Wayne Wright roars inwardly to cheer up, twenty seconds, and dead after fifteen seconds, he will have to run to put out this horrible chosen one.

“Shit ~ Ten seconds have passed, you’re coming soon.”

“Shit ~ Ten seconds should have passed. I’m counting the time by the amount of silent breathing. There are only twenty seconds in the countdown...”

“Fifteen seconds. Is this the second decade? Why is it still not happening, in case this timing mechanism is wrong, and my silent count is wrong?”

“I’m going to die, and I’m scared, they’re not kidding.”

“God, how dare they comment?”

“Ah ~ clicking sound of the mechanical quick change, and how come the little old man was still laughing?”

“He’s far from here, it’s going to take a while to get there ~ ah ~ ah he will arrive quickly.”

“God help!”

“Ah!”

“I surrender, I have been recruited, hurry up, get it off quickly.” Wayne Wright squirmed violently in the metal chair, his expression on his face terrified.

Chapter 580: The mastermind behind it.

At 4:50 a.m., two kilometers north of Longxitan Beach, at the first intersection turning towards town, a black Honda parked in the dark under the headlights, windows down, a black man in a black hat sitting in the taxi, watching from time to time the crossroads.

Five minutes later, the intersection is still empty. The car pulled away and the man in the car looked a little nervous. After another five minutes, the man took one last look at his watch, and then kicked the accelerator without hesitation. The black Honda raced at high speed and was gone within a few breaths.

.....

Twenty minutes later, the president's office lit up in the Amano Heavy Industry building in Asashima City. Zhang Yutian and another foreign man with grim eyes entered the office, and when the door was closed, Zhang Yutian silently sat in a chair and lit a cigar. Amidst the clouds and mist, he spoke slowly.

"Did you not say that you were the elite of the elites and that this plan is foolproof?"

"Mr. Zhang, our mirror intelligence organization dates back to World War II. About the credibility of our organization, I think you shouldn't need to worry."

The evil-eyed black man sat expressionlessly in front of Zhang Yutian and said in very standard Mandarin: "Although we are an economic intelligence agency, we have trained intelligence personnel for 75 years and the members we have trained are all senior intelligence personnel who have been trained for over ten years."

"I think this operation failed, maybe an accident happened."

"Accident?" Zhang Yutian frowned at a figure from Sichuan: "Mr. Laurel, this is just a factory. What kind of accident are you talking about? Even though there are security guards patrolling around the clock. 24, at most, they will be equipped with electric batons."

"We are the 'Mirror Intelligence Organization' and never go overboard when it comes to our own strength," the man named Laurel stood up and said coldly: "If Mr. Zhang doesn't believe it, you can choose ten security guards to come and try with me."

"But the action failed," Zhang Yutian sat down on the chair indifferently: "I instructed you to investigate the information on the equipment of the high ionization wastewater processor, but now you want to tell me that I have to pay you a big commission to save your trapped personnel from the hands of the intelligence services."

"This clause is already listed in the contract. Does Mr. Zhang want to break the contract?"

"I can donate the money, but now your man is in their hands. How are we going dealing with it?"

"Hmph ~" Laurel sneered: "Just a private company, I don't think our intelligence man spoke. We are the first intelligence organization in the world; you are insulting our honor... "

"Bell tingling ~"

The proud Laurel and Zhang Yutian were looking at the desk at the same time when the phone suddenly rang. Zhang Yutian was taken aback there were very few phone calls that could directly call his office, let alone it was almost five in the morning.

Responding suspiciously to the phone, suddenly his face turned lemon yellow as if he saw a ghost, threw the receiver aside, and then looked with a weird and bizarre look, he looked at Laurel the director of the Mirror Intelligence Organization, and said while leaning on his free hand...

“Zhang Yutian, I am Ye Qing, and a friend of mine wants to talk to you.”

“I’m... Wayne Wright, I’m sorry Mr. Zhang, I owe you a lot. I gave you, I confessed...”

“Zhang Yutian, what do you think? What are you looking for?”

“What ~ what do you mean?” Zhang Yutian sighed to relieve himself, for fear of panicking and to cover up his emotions: “Mr. Ye, I ~ don’t know this person, what did he want to do?”

“Zhang Yutian, you don’t stand a chance.”

The phone was hung up, leaving Zhang Yutian and Wayne Wright with horrified faces. The latter just bragged about the high-level intelligence personnel he had and this man sold the client in no time.

.....

Early the next morning, the peaceful Monster Heavy Industry Company was suddenly shattered by an explosion of noise. The interview vehicles of three foreign media were directly blocked at the company’s door. Before security came to inquire about the situation, several journalists jumped out of cars, waved their microphones indignantly and read the manuscript in English on camera.

“Hello everybody. Today is 7 a.m. local time. Just yesterday we learned something that angered the civilized world. When one of our fellow journalists, a French journalist, went to the Monster Heavy Industry factory to interview, he was arrested by the factory’s internal security agents, and they restricted the journalist’s freedom. A journalist from French TV International encountered regrettable brutality during the interview with Monster Heavy Industry’s president yesterday...”

“It’s the ITV television channel, I’m a reporter...”

“Boss, what should I do with the journalists outside?” Wu Yuexiang, the security captain, stood in the president’s office with a few headaches.

This is again a problem with journalists. Wu Yuexiang believed in his heart that the most perfect way to deal with these reporters is to grab the camera, throw it on the ground, and stomp on the ground, then slap reporters again. It’s a shame that this move could only be done in his heart, and in order to maintain the company’s image, Wu Yuexiang really didn’t have much to do with these foreign journalists.

“Wait a little longer, I’ll call you later,” Ye Qing waved his hand and motioned for Wu Yuexiang to come out first.

When the security captain closed the door and walked out, Ye Qing took a deep breath.

This group of journalists is undoubtedly paid by the Mirror Intelligence Organization, and they have spent money to invite foreign aid to create such a scandal. What a bunch of flies!?

At first, Ye Qing suspected the spy had been sent by the United States, but after a special interrogation to death, the mastermind behind him turned out to be Amano Heavy Industry, and it sent him to spy on the process for the treatment of high ionization wastewater.

.....

From a long-term perspective, the powerful ionization treatment equipment that can deal with the global problem of industrial wastewater is a hen that lays golden eggs. Not only is Amano Heavy Industry interested, but even the US government is jealous of this equipment.

.....

However, jealousy grew jealous, Amano Heavy Industry used this way many times, and there were very few who stung Monster Heavy Industry like a fly.

This electronic card came from this commercial espionage organization the Mirror Intelligence Organization based in the United Kingdom. But after collecting and collecting, they were unable to figure out the details of several factories in the central area surrounded by arid mountains. They suspected that industrial wastewater treatment equipment with high ionization is produced in these factories. So, after a few days of planning, a veteran commercial spy was finally dispatched, ready to sneak into the factory to find him. Regarding the professional skills demonstrated by this spy, if Monster Heavy Industry was an ordinary private company, it was really not enough for him to break in...

It's a shame ~ in the Monster Heavy Industry factory, there were only monsters.

It's time to clean the fly of Amano Heavy Industry and the reporters downstairs.

"Hmph ~" Ye Qing looked out the window and looked at the three journalists' cars in front of the building, they belonged to France International and Amano Heavy Industry.

I won't let you see the power of Monster Heavy Industry. Really, the majestic Monster Heavy Industry monster logo is not a single decoration.
