

M Factory 621

Chapter 621: Bankruptcy is the only way out.

After a few days of fermenting, people across the United States now have nowhere to vent their anger. A kind of anger at the humiliation was left in their hearts. As citizens of the United States, the country with the greatest military and economic strength, the people there are of course proud and conceited to belong to this country. As they were originally used to, a Chinese product was far from American products in terms of technology and perfection, and this made them feel unbeatable, and their products are flawless and unapproachable in the scientific and technological field.

As a result, this Chinese product actually stabbed a large basket, sent a governor and several members of Congress into a coma, and slaughtered countless aquatic lives. It is pure deception.

And here is the result of their deception, they, the Americans, appreciated and let in a Chinese product, but these Chinese want to assassinate them. This is why Amano Heavy Industry must be punished! That was probably the state of mind of the American people right now, they are angry and just want Amano Heavy Industry dead. This wish was quickly fulfilled by the White House. After all, this requirement was very simple and could calm people's anger.

At 8 a.m. Washington time, the United States National Environmental Protection Agency imposed a massive \$ 7 billion environmental protections fine, the second-largest in the history of the United States issued to Amano Heavy Industry.

Ranked first, it was naturally the fine issued to the British Stone Company that stirred up the oil spill in the Gulf of Mexico.

As soon as this amount was released, the anger in the hearts of the American people had improved slightly. A lot of people were jubilant to see how Amano Heavy Industry could come up with this huge amount of money.

When Zhang Yutian heard the figure of seven billion US dollars, he had already collapsed on his desk.

Seven billion US dollars, nearly 50 billion Yuan converted into renminbi... Perhaps before the accident happened, Amano Heavy Industry could still count on soaring stock prices to pay this astronomical amount that will bankrupt it. Now that its share price has dropped below 40 Yuan, Amano Heavy Industry has only 2 billion funds in circulation. I'm concerned that the entire company alone could be conditioned to auction to raise the US \$ 7 billion.

Now the problem is, a crisis more urgent than the collection of fines. The previous thunderclap couldn't move the mysterious giant that swept through countless stocks of Amano Heavy Industry. Now the Crazy Shipments have driven the Amano Heavy Industry share price down again and again.

.....

It really confirmed that sentence. I thought I fell to the ground, but there was a basement under the ground, and there was a cellar under the basement, and there were eighteen layers of hell under the cellar.

.....

After finally getting up from the desk, Zhang Yutian's crooked lips quivered violently. This group of mysterious financial giants is truly ruthless. Since the accident, they have just thrown a huge amount of over 3 billion shares.

It should be...

"Old ... Boss, there are a few things for you to decide." The female secretary avoided the desperate eyes of Zhang Yutian and whispered: "Because you rejected the orders for the two production lines of automatic robots of the automobile groups JAC and Harvard and transferred the orders of the two groups in the production and which will be delivered to the company KUKA in Germany. ~ KUKA has not given us these production lines so far, which may be due to the explosion of negative news in the United States. ~ In addition, sales of our robotic products and our smart gym are plummeting along the cliff. ~ And ... There are also these retail investors who sell stocks. I'm afraid this will be another drop when the market opens tomorrow morning."

The secretary's words mean Amano Heavy Industry is facing dire straits. Without orders, there will be no capital income, and stocks have collapsed, which means assets have fallen sharply.

Zhang Yutian understands the only vitality now is to immediately find out the cause of the accident in the sewage treatment system. Thinking about this, he gritted his teeth and stood up and asked the secretary to warn all the engineers who had not left the company to go to the mechanical lab.

After a round of summons, and after half an hour, the secretary was able to summon no more than 20 engineers to various positions. They looked curious. As if they were waiting for Zhang Yutian's order to announce the bankruptcy and dissolution of the company.

The dissolution of the company was not heard, but Zhang Yutian came with a mobilization order to find out the cause of the accident. In the mechanical lab, there was also a sewage treatment system that was about to be assembled, and Zhang Yutian stood next to this equipment.

The 20 technicians looked at each other, then everyone stepped back in unison.

"Old ... boss, don't make fun of me." A technician took the lead and snapped back: "As soon as this thing is turned on, no one can predict the consequences. Even... a governor and dozens of congressmen are in a coma, all of us little Engineers, how can we not hide?"

"The participants, each will be rewarded 500,000 Yuan, to participate in the discovery of the cause of the problem, then you will be rewarded two million each." Zhang Yutian bowed his mouth in an unpleasant posture at the sight.

Five hundred thousand and two million is very exciting indeed, but no matter how exciting it is, you must have a life. He threw back a governor, and dozens of congressmen are in a coma, and even the president before them is not getting any better. A trip to the United States allowed him to pass through a ghost door. Now his crooked mouth has an indelible mark. Without forgetting, the technicians who accompanied him did not have this chance, they had been declared "dead" by the doctor. They're all high-tech talent, and they've made half a million in two years. There is no need to fight for this sum and risk their lives.

"Boss, it's not about the money."

“To detect a fault, you must turn on the device and record the cause of the fault. This is just in case...”

“Nothing in case, since the problem did not occur during the test, and it means that it is extremely small, and for our safety, we will wear electromagnetic protective clothing, a helmet on the head, and use a thick lead plate for the protection of the helmet. I think...”

“Boss!” A technician hurriedly raised his hand to interrupt Zhang Yutian’s beautiful plan: “I want to quit.”

“Old... Boss, I’m sorry, you’re doing it alone, I don’t want to test the quality of the protective clothing,” Another technician said.

“Boss, I’m not married yet, just in case it affects my lower body as well. ~ By the way, there is a Chinese medicine doctor in my hometown who is very good at acupuncture. Some people have had one stroke and have a crooked mouth. He treated them with the needles and returned to normal. If you want to try it, you can contact me again.”

The engineers who arrived went faster than they came. A few minutes later, only Zhang Yutian remained in the huge laboratory. A feeling of hopelessness, helplessness, and confusion filled his whole mind.

So far, only parent company Anqi Heavy Industry and Tianli Group can jointly save Amano Heavy Industry. But is it necessary to save a business that has neither hope nor orders?

“Tingling bell ~”

The phone rang, and Zhang Yutian pulled out his cell phone, but when he saw the number, his eyes widened. The caller was surprisingly the young president of Monster Heavy Industry.

“Hey ... hey ~” Zhang Yutian wondered in his heart that his purpose in calling him was to make fun of him?

“Haha ~” As soon as the call was connected, there was a pleasant laugh: “Mr. Zhang, hasn’t your Amano Heavy Industry declared bankruptcy yet?”

“You... you... you.” Zhang Yutian was suddenly angry... I can’t tell how.

“Do you think the big investors got away, leaving only a few occasional retail investors?” Ye Qing said something that made him a little confused.

“No, the biggest shareholder is me. I lost 3 billion before, and I still have 5 billion shares, Amano Heavy Industry in my hand!”

“I will give you a fatal blow at the critical moment,” Ye Qing over the phone seemed to say a very mundane thing: “A little calm, Zhang. The bankruptcy of the Amano Heavy Industry is inevitable.”

“Wait, are you the one who bought the shares of our company at a high price?” Zhang Yutian grasped the key to the problem: “From the beginning, you bought our shares at a high price ... ~ Ye Qing, you deliberately published the drawings, didn’t you?” With this sentence, Zhang Yutian shouted with all his might: “Otherwise, how could you have expected our products to have problems?”

“Zhang Yutian, you finally admitted you stole my designs. ~ Hey ~” Ye Qing sighed: “You stole the designs, but the technology hasn’t been perfected, so you can’t wait for it to be launched on the market.”

“Everything... This is all caused by you.”

“I can tell you that your equipment can hurt people because there is a problem with the winding structure. As for the right structure, you can only explore it slowly on your own. ~ You don’t have time, it may take you ten years, but also to find it not to produce it. But the US government demands that you give people a good explanation as soon as possible. ~ Just that, Lancelot the director of the Environmental Protection Agency has announced his resignation, the White House quickly approved this request.”

Seeing Zhang Yutian’s silence on the phone, Ye Qing continued adding calmly: “Americans have always been arrogant, and now a heavyweight leader has lost his political life, as well as a governor and several other members of Congress are in the coma. ~ Believe me, America is not going to swallow this breath in vain. ~ The sooner you initiate bankruptcy proceedings, the better off you can save yourself.”

“You did it all. You did it all!” Zhang Yutian was going crazy all of a sudden.

Chapter 622: American prejudice and suspicion.

That day, Zhang Yutian was in despair and faced the cruelest choice in history. Shortly after he and Ye Qing had ended the call, the parent company Anqi Heavy Industry also expressed their views very seriously. She left Zhang Yutian to bear all the consequences alone, as this incident tires them out too.

.....

The United States is a traditional friend of Anqi Heavy Industry. Chief Taiichi Harada is already an older man, half down on earth. When he was young, his heart was higher than the heavens, and then the United States taught him to be a man, thus becoming the “closest” brother-level partner in the eyes of Americans. And thanks to him, the United States announced their cooperation with Amano Heavy Industry so quickly, on the other hand, they were forced by Monster Heavy Industry and refused to cooperate with them.

Now that Amano Heavy Industry has stabbed a basket in the United States, of course, they will be hit by the fish.

After that, the Chinese State Administration for Industry and Commerce contacted Amano Heavy Industry. People from the General Administration asked Zhang Yutian if he had signed a statement agreeing to be punished with the White House. Zhang Yutian could only grit his teeth and say yes, shaking his head regretfully, claiming that the United States is now pressing through official channels to formally open a trade investigation against him. It would be nice if the public statement hadn’t been signed, and now that the statements are signed, he couldn’t back down.

In the morning, the Amano Heavy Industry share price eased further. Ye Qing broke all the stocks he bought at different prices. It’s a shame that there are only a few stocks that can be sold short in the Chinese stock market, and Amano Heavy Industry was not on that list. Otherwise, you can make a fortune just by shorting.

Ye Qing had used this form of massive share sell-off to create panic among investors who own Amano Heavy Industry shares and let them follow the sale, so Amano Heavy Industry's assets shrank considerably.

.....

At first, when there was no bad news, Ye Qing asked Tianjin to operate multiple accounts to buy shares of Amano Heavy Industry, and when the shares reached the highest position, and everyone was bullish and when Amano Heavy Industry thought it could take off, Ye Qing has already started selling shares. He bought them at an average price of 55 Yuan, at the highest position, and started selling at 87 Yuan per share. Counting down, there is neither loss nor profit, but the \$ 5 billion that was finally dumped can make all investors panic and sell.

.....

In the afternoon, Zhang Yutian gave up his resistance and held a press conference at three o'clock. During this lecture, he sat at the conference table and said nothing, and the speaker next to him read the manuscript.

"Dear media friends, today we have to make a very hard decision. ~?"

"We, at 2:15 pm, filed a written bankruptcy petition with the Asoshima City Intermediate People's Court. We are unable to continue leading Amano Heavy Industry, moving forward to a brighter future. ~ Currently, our total assets are 62.1 billion Yuan and negative assets are 20 billion Yuan. The specific liquidation proceedings will be arranged by the court... "

As soon as the news got out, all Chinese media and internet users were completely shocked.

How long did it last? And why did Amano Heavy Industry, which had such good momentum before, go bankrupt? Many people know that Amano Heavy Industry made a huge basket in the United States and is fined the US \$ 7 billion. But Amano Heavy Industry has a big family and a big company behind it. Why didn't she have to struggle and work hard for a while?

"Excuse me, why are you filing for bankruptcy?"

"Is your company unable to pay the huge fine imposed by the United States?"

"Excuse me..."

The reporters kept asking, their tone was so quick they were overwhelming. However, the spokesperson was in no mood to respond to reporters. After announcing the bankruptcy declaration, he returned to his chair and pretended to sort the papers.

Zhang Yutian's face was dark and fearful, and the spokesperson did not dare to open his mouth. The reporters did not dare to insist, but Zhang Yutian took the initiative to take the microphone.

"We are glorious because of the sewage treatment system, and we also failed because of the sewage treatment system." Zhang Yutian sighed: "Here, I also hope Monster Heavy Industry will learn from our lesson and study its high ionization industrial wastewater treatment system well and carry out full engineering control to this industrial wastewater treatment system in strong ionization."

Like reporters in the United States, Chinese reporters have not reacted. Zhang Yutian responded and succeeded in removing their inner doubts.

Since the technical principles are the same, the Monster Heavy Industry... may encounter this situation; Zhang Yutian only used this method to disgust the Monster Heavy Industry, which is his latest solution.

Zhang Yutian, who originally had hoped for the sewage treatment system, could only regretfully declare bankruptcy after guessing that Ye Qing had deliberately left the drawing lying on his desk, but if he said that no one will believe it because it is an incredible pick in the eyes of ordinary people, but Zhang Yutian knew in his heart that since the designs had been deliberately used, the sewage treatment system bypassed and the High-intensity ionization was just one of the fatal flaws. He knew very well a short circuit meant the circuit was damaged, the coil of high purity silver wire inside was melted, and this system was completely scrapped. He knew this problem could not be solved, let alone other problems.

If he didn't go bankrupt, the United States wouldn't let him go easily. At this point, Zhang Yutian also didn't have a fluke mentality. He couldn't fix the short circuit problem. Moreover, it has no use-value for the United States, and only its bankruptcy can appease the anger of the American people. However, he did not intend to help the American side.

This poisoned bait ate Amano Heavy Industry to death, and Zhang Yutian wanted to let the Americans taste it.

.....

As soon as the bankruptcy was announced, Amano Heavy Industry became a hot topic of discussion online, whether in China or the United States.

On YouTube, the video of the former president of Amano Heavy Industry interviewed at the door of the Environmental Protection Agency was returned. Many American netizens laugh at the president's crooked mouth and his speech hesitates with a knotted tongue. However, this video was not returned because of his crooked mouth, but a few words he said during a media interview.

As for China, Monster Heavy Industry's sewage treatment system has already been applied in many cities, and Zhang Yutian called on Monster Heavy Industry to learn from its lessons and pay attention to the possible damage that can result from strong ionization to the human body. He said something similar at the press conference in China. This has led the American people to prejudge that Monster Heavy Industry's products are very likely to have similar fatal flaws and if there are no flaws in this system, Monster's wastewater treatment system Heavy industry is too perfect. Too perfect to make people jealous, but a truly perfect product is impossible to exist.

But why from the start, Monster Heavy Industry refused to put its products on the American market? And which is this suspicion? This kind of damaging suspicion is very marketable, because from a normal business point of view. No high-tech product can reject the US market, but Monster Heavy Industry has rejected it.

So what about the Chinese?

To be fair, due to long-term prejudiced Western media reporting and in particular, in the eyes of most Americans, China is still a backward country with a system that lacks a fair and just market. For some benefit, Chinese people may ignore some health and safety concerns.

The Amano Heavy Industry affair has made the American people suspicious even of the products of Monster Heavy Industry. Under the video, many people even made fun of Monster Heavy Industry.

Faced with the many prejudices of the American people, Monster Heavy Industry did not respond but delivered shocking news.

Monster Heavy Industry made a major breakthrough in energy technology half a month ago.

Chapter 623: We are not optimistic about the new products of monster heavy industry.

Everyone knows energy is the biggest stumbling block to the advancement of humanities and technology.

From 1969, the United States first landed on the moon, then to the phrase said by Neil Armstrong: "I have taken a small step, a big step for all mankind", and which has inspired by countless scientists around the world, who have become extremely optimistic to estimate that by the year 2000 humanity will enter the era of cosmic exposure; mining on the moon, installation on Mars, with a view to the precipitous exit to the solar system. It was everyone's firm belief at the time. Newspapers and magazines have all thought this is no dream.

You should know the experts at the time were all real experts, unlike today when they can blow black and white for money.

The time has unwittingly reached the middle of 2017, and the reality has hit everyone in the face hard. Not to mention settling on Mars, decades later the United States even lost its ability to land on the moon. To fire a manned missile, They even have to ask for help from Russia. This is the case in the United States, and even more so in other countries with inferior technological capacities.

Over the decades of science and technology exhibitions, mankind has made rapid progress in the field of electronic information but in terms of energy, the missile is still a chemical-fueled rocket, and the car is still with a gasoline internal combustion engine.

The advancement of battery technology is based only on improving materials, and the principle is still the same as it was decades ago.

Today, Monster Heavy Industry announced a major breakthrough in energy, and as soon as the news got out, reporters and energy staff immediately reached out to Monster Heavy Industry by phone and asked how they were able to achieve this breakthrough.

Is it a thermal breakthrough?

Is it bioenergy or fossil fuel?

Of course, they didn't think of nuclear fusion, but when they found out it was a technological breakthrough in batteries. The lab and energy staff greeted each other politely and hung up after a few brief conversations.

Reporters learned that a week later, Monster Heavy Industry will host a product showcase to announce the advent of a new generation of energy vehicles. They are also not very passionate, only that they will be there at that time to help Monster Heavy Industry promote new products.

The cause of this situation is not the products of the Monster Heavy Industry do not work, but over the years everyone has been numbed by the overwhelming innovation technology of batteries. There were Jinlong batteries on the front and quality capacitors on the back. Foreign tech companies have also announced they have made inroads into some batteries.

Huawei, Google, and Samsung have all announced such news, but they have been saying for several years that they are still unable to take these battery technologies from the lab to the mass production market. Of course, no one has known their technology which is a hundred blocks from the plasma battery.

The next day, many news sites republished this news, but none of them made it into the headlines. The news has also reached the United States.

On YouTube, American internet users who were successfully raised by Zhang Yutian had a lot of prejudices. At the moment, none of them are optimistic about Monster Heavy Industry's new product.

"Objectively speaking, I am still very grateful to Monster Heavy Industry. However, the wastewater treatment system makes me wonder if this is a copied and deceptive product made by Amano Heavy Industry."

"I am also grateful for this company, but for electric vehicles, our great Tesla said it can shock the world."

"The sewage treatment system must be a technical scam made by Monster Heavy Industry, otherwise how can they not dare to be listed in the US market?"

"The sewage treatment system is a lie, and this new car power must be a lie too."

The mindset of Americans is now very strange. Especially after Amano Heavy Industry declared bankruptcy, they seemed to lose their minds, and they just turned their attention to the Monster Heavy Industry. They speculate for no reason that Monster Heavy Industry must be aware of the huge shortcomings of the sewage treatment system and will not dare to sell it to the public in the United States, and with a bad conscience, they did not even dare to refute the doubts raised by the American people.

No company does not pay attention to its own image in front of Americans. If any of them encountered rumors, they naturally had to devote twelve energy points to disproving the bleaching, but Monster Heavy Industry didn't say a single word. Americans are strong in the United States, and now they are questioning their company's products. But they pretend not to hear and haven't given an answer? Which is particularly annoying for the American people.

Ultimately, the indifferent attitude of the Monster Heavy Industry drew the rampant bombardment of America's famous late-night talk show – "Rand Talk Show".

Talk shows have always been an indispensable and important program in the entertainment of the American people. These famous talk show hosts are worth more than most popular celebrities.

Especially during general elections, these talk shows continue criticizing and mock politics and candidate politicians.

Election and the talk show have been their preferred audience partner for many years. Since they even dare to laugh at politics and presidential candidates, how can they care about a distant enterprise in China?

They are just careful not to involve certain personal attacks, for example, racial discrimination and other taboos. Those guys who can play word art to the extreme can laugh all night long without repeating their lines.

.....

It's not that Monster Heavy Industry has a bad conscience and doesn't dare to respond, but that Ye Qing thinks it's unnecessary. He has already officially informed the Environmental Protection Agency and the White House, that he will never list the high ionization industrial wastewater treatment system in the US market, and since he did not intend to list their products in the United States, Ye Qing did not let the company go to the United States to talk online.

Ye Qing's main goal was to step up the development of new energy vehicles and remove mid to high-end foreign brand vehicles from the sales throne.

It is a difficult and long-term goal.

.....

If anyone says that Tesla, the world's most famous electric car brand, is threatening to take internal combustion engine car brands off the market, I'm afraid the kings of the auto industry around the world laugh out loud at these words.

Sales of these electric vehicle gadgets have been good in recent years. But the enormous natural flaws made them impossible to generalize. Their flaws are too numerous: electric vehicles had to be equipped with large-area battery packs, their spontaneous combustion rate is several times higher than that of traditional vehicles, and their biggest flaw is that the charging time is too slow. Plus, if someone bought an electric car. He could only use it as a walking tool in town. If he wanted to go a little longer he had to think about the battery life, can it last?

The nominal battery life is 600 kilometers. In winter the temperature drops and you can run 350 kilometers even if it burns incense. And in winter as in summer, the heating and the air conditioning must also be activated, which further reduces the cruising range. But... none of these faults exist with plasma batteries.

.....

So, Ye Qing held a meeting with vehicle technicians and public relations to publicize the networking and interaction technology between new energy vehicles and Magic Cystal mobile phones, and to commit to building a new energy vehicle that will use the plasma battery which will cause disruption in the car market.

As a result, Yang Baihe, the director of the propaganda department, quickly found Ye Qing. She was holding a tablet in her hand, which was broadcasting the famous program "Rand Talk Show" in the United States.

In the program, the famous host, who even dared to laugh at the president saying how it is that the President of the United States is black, sat solemnly on a chair in a suit and shoes, he said that Ye Qing was so angry that he wanted to laugh. It was a black joke on Monster Heavy Industry's wastewater treatment system.

Chapter 624: Return stroke.

"Do you have no hope of living? So go to China to visit the sewage treatment plant, maybe your wife can still get a large amount of money as compensation." "Tell the President to recommend the introduction of such a large-scale sewage treatment system, as the large lakes have been plagued by the Asian carp problem for too long." "I suggest these giant American heavy industry companies learn from Monster Heavy Industry. They are too friendly with our American people since they preferred letting their own people not suffer." "The host named Brandt said he would take care of this problem." "And the black jokes kept popping up one by one. As soon as this talk show opens, many people will certainly follow suit. This can be seen as a sequel to the overthrow of Amano Heavy Industry. The American people who lost their minds simply used Monster Heavy Industry as a joke story.

Ye Qing knew he had to prove the abilities of Monster Heavy Industry, and as a decision, he actually waved his hand to let Yang Baihe take matters into his own hands. Of course, he is not going to deal with such trivial matters on his own. As predicted by Ye Qing, as soon as the "Brandt Talk Show" came out, these American netizens seemed to have found the backbone and bombarded the sewage treatment system even more unscrupulously. Brandt, the famous talk show host, also posted several screenshots of the show on his Facebook page. He guessed he wanted to take advantage of this hot spot to grab the attention of fans. The screenshots selected were all black jokes about Monster Heavy Industry, and the images were accompanied by exaggerated emojis, and the number of its fans skyrocketed, lo and behold they finally found the happiest gathering place for that anyone can tell black jokes about the high ionization wastewater treatment system. Those who have tried to help Monster Heavy Industry or its sewage treatment system have all been simply removed and blacked out without exception. It's not that no one has reminded Brandt that as a public figure he should pay attention to his image when speaking. But he only became famous through the bottomless mouth of black jokes. Did not Brandt pay attention to his career by coming up with such insightful enough jokes? Brandt didn't care, he even told his friends privately that Monster Heavy Industry had a bad relationship with the United States that they didn't even have an office in the United States and he didn't need them. After receiving the order from Ye Qing, Yang Baihe immediately organized the staff to sort out the refuted information. But before the documents were available, there were righteous people on the China side, and they started to launch a righteous counterattack against the brainless people in the United States. Among those men who just launched a counterattack, there was just one who worked in the Shanghai industrial wastewater treatment plant.... Xu Fengling is 27 this year and is a senior technician at Shanghai Industrial Wastewater Treatment Plant.

A graduate of a regular college of science and technology in the United States, the job he found after returning to China was initially looked down upon by his relatives and friends. Even his girlfriend he spoke about before leaving the country laughed at him on WeChat and left him. After putting in a lot of

effort to go abroad, he came back and found a tiring job in sewage treatment, comparing it to his old friend who stayed in China and studied in China and who works in a public institution and is highly regarded by its leaders. Wastewater treatment plants, as the name suggests, treat smelly wastewater all day. In the eyes of some, there is no difference between this kind of occupation and waste disposal. At first, Xu Fengling also felt aggrieved and his profession was not understood by others. At the turning point more than six months ago, Shanghai city leaders suddenly gathered one day at an industrial wastewater treatment plant that his grandmother didn't care about and his uncle didn't love, do not talk about those around him. The management team, as cautious as meeting with the leaders of the heavyweights, welcomed a package of what they called the world's most advanced industrial wastewater treatment system. And he is delighted to state that from then on, the city of Shanghai has grown into a first-class city with excellent water resources in the country. Faced with the mayor and the deputy mayor, and the mysterious confidence of a group of office managers, Xu Fengling, who had just returned from the United States and had taken office a few days ago, could only secretly mock the bureaucrats for their lack of culture. A set of sewage treatment equipment that is not as big as a car can tip them over. As a result, on the second day after installing this high ionization industrial wastewater treatment system, Xu Fengling was directly stunned by the scene that overturned scientific and cognitive views in front of him. In front of this set of equipment..., Xu Fengling felt that his brain was screwed up, and he had learned everything for nothing in American universities.

Later, in the eyes of outsiders, this foul-smelling industrial sewage treatment plant became a "fragrant steamed bun" that the whole of Jiangnan Province was extremely jealous of. The leaders who came to visit them came one after another. Do not count as chief or county chief, and even the mayor has come. When they arrive here, no matter who they are, they must be polite and listen to instructions. Naturally, the condition of the sewage treatment plant was also high and even very high. Today, after more than six months of testing Monster Heavy Industry's sewage treatment system, it has cooperated in building vintage sewage treatment plants in more than 30 cities. As for Xu Fengling, a senior technician at Shanghai Industrial Wastewater Treatment Plant, he was in charge of recording all parameters to test Monster Heavy Industry products for more than six months. Of course, he also followed through and out of the sky, those towns that have been visited and want to lift the big sedan chair and invite him to guide the work in their towns. He has no difficulty in life. There are a large number of front-row leaders along his route from the house to the sewage treatment plant, who wanted him to help them solve their problems. Even his ex-girlfriend shyly ran, begging him to help her boyfriend improve his position in labor. Xu Fengling is not a person who forgets his roots. Monster Heavy Industry gave him a bright point in his career. He naturally considers it to be his most respected "teacher" in life. Xu Fengling is a graduate of the American University and is fluent in English. Of course, he often paid attention to current events and technological developments in the United States. Therefore, this attention made him see a scene where his lungs were about to explode. Before being in the United States, he watched the "Brandt Talk Show" on every issue. Back in China, he did not miss the "Brandt Talk Show" which he was honored to be invited to attend. It turned out that he saw in this show that they were telling black jokes about Monster Heavy Industry. How could he tolerate Brandt doing such things?

Xu Fengling angrily logged into his Facebook account and left a message under Brandt's personal homepage. Rightly so, that he publicly apologizes to Monster Heavy Industry. The end was naturally unhappy; after Brandt ridiculed him with a few words, he directly blocked him. Under his anger, Xu Fengling always kept his cool. He understood very well that in front of these strangers he must use

reasonable and well-founded evidence to beat them severely before they are submitted. As a result, Xu Fengling connected to the data server of the Shanghai City Sewage Treatment Plant. Inside there were massive amounts of videos, images, texts, and data that have been recorded from the first day of installation of the sewage treatment system until today, inside there, there is almost all the information about the wastewater treatment system from Monster Heavy Industry. These are no secrets, and he immediately greeted the technician at hand and worked with him to produce evidence of a counterattack. At around 2 a.m. Chinese time, 2 p.m. local US time, Xu Fengling uploaded the first batch of rebuttal evidence to his personal Facebook account, by the way, "Aitplan", and a lot of supporters with big fans are below. [Brandt, please publicly apologize to Monster Heavy Industry.] Xu Fengling has completely hit the bar with Brandt. Not only did he post a screenshot of himself blackened out, but he also gave a very catchy title. Underneath the title is his carefully crafted video. A lot of people who got caught by Aitplan were curious to see what it was and suddenly saw the very catchy title. Haha ~ the video is half an hour-long, so don't watch it too fast, take a message from the front row and laugh at this funny Chinese talent is key.

Chapter 625: Reverse.

Brandt also noticed the presence of the video posted on YouTube by this steadfast Chinese man, but since every minute of his time is precious. How will he be able to spend half an hour watching the whole video? And in order not to waste time, he clicked on the video to open it casually and saw the Chinese man talking, and then he walked quickly a few times and said: "It looks like he is uninteresting. There is no important point. So don't blame me for posting you on my homepage as a joke." Brandt sneered, and took a screenshot of the Chinese post, and hung it on his homepage to entice the attention of fans. [A sewage plant in China came out washing the floor and asked me to apologize, which is ridiculous.] It was Brandt's title. As a well-known talk show host in the United States, Brandt's fans are understandably overwhelming, and after he published his post, in less than a minute hundred of comments started appearing on his Facebook page. Brandt took a look at the comments, and as expected, those comments were almost mocking, about this technician from the China sewage treatment plant trying to wash the floor. "Monster Heavy Industry didn't dare answer, but let a technician do it for it, he works in a wastewater treatment plant. This is very suspicious, are there any hidden secrets?" "This guy doesn't speak Standard English and doesn't work hard at all." "Sit down first. I'll see what the video says." "Who watched the video, tell me the cleansing method inside; it's too long to watch." Brandt sat comfortably at his table and checked the comments on his Facebook home page on his cell phone. His cell phone is a bit special, with a silver-gray metal casing and a mysterious monster icon with electric patterns on all the horns on the back of the phone. That's right; the phone used by Brandt is a Magic Cristal phone. Of course, he himself knew the maker of his mobile phone is Monster Heavy Industry, and now the Magic Crystal mobile phone is quietly popular in the United States. Although the payment method is still irregular, that hasn't stopped it from becoming the best mobile phone in the hearts of all American mobile phone users. But Brandt always wanted to tell black jokes about Monster Heavy Industry in public and in private clearly standing out from other talk show hosts, he has been adhering to them from the start of his career until today. As the time passed, Brandt gradually noticed something was wrong with the direction of the wind in the comments. From the fifteenth minute, the comments started to get confusing and some people started suggesting he seriously watch this video, and some people started talking to this Chinese technician, and several even criticized him in a post harsh language. What is happening here? Brandt waited a while, and the wind direction in the comments that followed was even

worse. It appears that many people turned around and blamed themselves after watching the video. As a last resort, he clicked on the video again with a serious look. As a result, this video made his heart turn pale. In the first few minutes, the Chinese technician spoke about the power of the powerful ionization wastewater treatment system produced by Monster Heavy Industry. This is where Brandt jumped straight to the start of the video to see it with interest. "Maybe I should shut up because I'm not an employee of Monster Heavy Industry. Maybe I should ignore these people, who cherish knowledge, pride, and prejudice, superficially and arrogantly, without insight like the Monster Heavy Industry did." "Please forgive me for not being so open-minded. Brandt was my favorite talk show host before, but he publicly slandered the great Monster Heavy Industry in the program. ~ Here I want to ask you. Have you forgotten the scene that happened in the waters of western Japan a month ago? Who saved your countrymen? And now, who slanders former heroes in shameful language and not scientists? ~ Since you are arrogant and ready to judge for no reason, I will let you open your eyes and take a good look at the real technology of the high ionization wastewater treatment system produced by Monster Heavy Industry! ~" In a way, this young Chinese man, who maybe hadn't used English for a long time and got a little stiff. Within minutes, the angrily told monologue made Brandt feel guilty for no reason. "....." "For some reason, this young Chinese man may have not have used English for a long time, his speech was a little blunt. Within minutes, the angrily narrated monologue made Brandt feel guilty for no reason. While he respected the professional credo of a clear distinction between public and private, that didn't mean Brandt lacked a conscience. When the young Chinese man's monologue was about to go over, it was time for him to let the American people keep their eyes open and take a closer look. Brandt didn't care at first, as he had advanced a little's footages before, which appeared to be the surveillance footage of the sewage treatment plant, however, when he seriously started browsing this video in its entirety. It wasn't until then that Brandt realized he had made things a little big. The 25-minute video he followed turned out to be a fast-forward shoot that was erected over the sewage treatment tank and shot 24 hours a day. Brandt watched the sunset go by and time to stand up constants on the photo. The months have changed here, and the rain and snow have flown here. The only constant was the powerful ionized sewage treatment system placed in the sewage treatment tank. It worked almost all the time. In the high-definition surveillance image, the sewage pool did not know how many times it repeated itself. But without exception, whenever the wastewater is filled into the treatment tank, it will always be surrounded by a purple halo, which will quickly turn the wastewater into a pool of clean water. After a month of fast-moving footage, Brandt was shocked to realize that this Monster Heavy Industry-built sewage treatment system brought in at least one wave of visitors almost every day. There were so many of them that they always bypassed this system for a long time before they wanted to leave. Two months later, Brandt hasn't even seen the image of a maintenance shutdown, and the number of visitors has grown. Even a few times when the skies were laden with snow and the ground was quickly dyed white, many visitors still showed up. Three months have passed during the fast airing time... Brandt's forehead filled with cold sweat, and this sewage treatment equipment seems to have never stopped working. It wasn't until the entire wastewater treatment plant was cleaned and refurbished that it got a short break. No one could question the authenticity of this video and would have imagined that the wastewater treatment system, which they considered extremely unreliable, could run continuously for three months without a single overhaul. Is it reliable? Even if Brandt had no conscience, he wouldn't dare say it was reliable in the future. Can we say whoever posted the video didn't slap it? Is it safe? During the three months, when playing the video, Brandt couldn't recall how many people had visited this sewage treatment system. Five thousand? Ten thousand? It's too

embarrassing, how can Monster Heavy Industry be so powerful? Brandt instantly regretted not watching the video seriously from the start, so he put it on his Facebook account as a joke. Now, even if he wanted to be a turtle, he couldn't be. When the progress bar was at the end, the Chinese technician has reappeared. This time he had in his hand a pile of documents, on which he had written a row of textual reports in Chinese characters and not in English that Brandt did not recognize. "In your eyes, our Chinese safety standards seem very poor. So I ask you to take a closer look at this electromagnetic intensity report collected by our technicians for seven consecutive months. ~ If you don't understand, please go to Google, please. I don't have time to teach you literacy. "On this guy's Facebook account there were also downloads of numerous electronic analysis reports. Brandt opened up Google with fear but was blinded by the data on the spot because the EMI data report collected there was actually higher than US national safety standards. For seven months, data were available every day, and every day fell short of US safety standards. More and more people started confessing their appreciation for this sewage treatment system after watching the video and turned on Brandt one after the other because he was the only one misleading internet users. "Oh, my God, look at the content of previous posts in Brandt's account, how ridiculous that looks now. ""Damn Brandt, his mouth is full of lies. ""I want to apologize to Monster Heavy Industry. The technician's rhetorical question in the video made me feel ashamed of myself. I even forgot the action of the big Monster Heavy Industry rescue. ""Brandt, quickly apologize to Monster Heavy Industry. "".....Brandt, who lost the skies, could only cling to his mouth since he couldn't be a turtle. After thinking about it for a long time, he finally found something that was unmentioned in the video or the document and came to a fight. He said: "Since the sewage treatment system has such high safety standards, it must have sacrificed the power side of the sewage treatment, and since the equipment in the video looks safe and reliable, this which means that the sewage purification power is very low. This Chinese person is suspected of exaggerating during his speech about the capacity of the sewage treatment system. He said it again on his Facebook account. "The result was quick to come... half an hour later; the Chinese technician slapped Brandt again with justified facts.

Chapter 626: My name is Shi Lei.

Xu Fengling posted another video. This time in the video, he lost his previous anger and became very calm: "I am shooting this video in a sewage treatment plant," Xu Fengling stood in front of the sewage treatment tank and said: "Now the pool is full of clean water, and it's just been purified... How clean is that water?" Xu Fengling filled a measuring cup from the swimming pool. It almost held 300ml of water drawn from the tank and swayed gently in front of the camera. Everyone could see the water in the measuring cup was as clear and transparent as the spring water. This quantity of water is out of comparison and differs from that obtained from the Amano Heavy Industry wastewater treatment system at the time. Although their purified wastewater met the discharge standard, their water quality was still a little cloudy and the clarity was several times worse than that of Monster Heavy Industry. "Is it okay to drink this water straight?" Xu Fengling asked this question with an empty face holding the measuring cup: "We have also been inspecting the water quality for a long time. I downloaded the inspection report... I know you doubt, be surprised, and feel God. It's impossible. But it's the fact that no one can change the technological changes brought about by this historic Monster Heavy Industry product." Just when everyone thought Xu Fengling would take a sip and show everyone there that this water was drinkable. Xu Fengling poured the water from the measuring cup and held a glass fishbowl to the side. When he pointed the aquarium at the camera, everyone realized there was a group of shiny silver objects swimming in it. Carefully distinguishing the sparkling silver, they found that they are in fact

thin fish that are so transparent they can see their bones. Strangers were surprised to see such a peculiar little fish. They had never seen this creature as a spirit in water. "This is a silverfish," Xu Fengling explained while pointing to these beautiful aquatic creatures: "It is one of our traditional Chinese delicacies. There are many nicknames about it. But its biggest feature is not that it tastes delicious, but that it is very easy to die. If the water quality is slightly poor, it will die or even die when it comes out of the water." After that, Xu Fengling used a small net bag to catch some small silverfish in the aquarium. These translucent fish, as expected, stood still after struggling a few times. These little fish... are really more delicate than the princess. Then, Xu Fengling took the next step; he directly extended the aquarium into the sewage treatment tank and changed the water there. In the process, the few other small fish ran away, and the aquarium water has been replaced by treated sewage: "Are these delicate little fish going dying? If they don't die, Brandt will be embarrassed and thrown abroad. After all, he just said on Facebook that the purifying power of this Monster Heavy Industry product is too low." After a good ten minutes, these translucent little fish were still running around the aquarium. "My God, this is amazing. Amano Heavy Industry's product killed fish in a river. But can it turn industrial wastewater into a source of water that can be directly drunk?" "I admire it. This way of proving is more civilized and efficient than drinking sewage directly. After all, the small, translucent fish in the aquarium are very fragile. I raised a small ornamental goldfish caught from the Amazon River. If the water quality is a little poor, they die." "Please forgive me for misunderstanding you before. I solemnly apologize to you here." "The person who should apologize for the most is our talk show host Brandt." Amid comments from countless internet users, the video ended. Finally, Xu Fengling calmly said to the camera: "Mr. Brandt, can you apologize to Monster Heavy Industry?" "If you are unconvinced, then I will continue. As long as your question is scientifically correct, I will prove it to you, I only ask you to show the responsibility and courage of a man!" Famous talk show host Brandt, after watching the video, his sweat has already started to rush. He didn't expect him to be slapped in just half an hour on his show which he was trying hard to get. This guy was too real; he was just a host who relies on insults. Brandt wanted to pretend he didn't see this video, then turned off the computer and phone and fell asleep. But it didn't work, he can play tricks, he can be black. However, he should not pretend to refuse to apologize after being slapped with solid scientific evidence by causing hatred of his own show. Because it's unethical, it doesn't matter in private. Now it's almost the equivalent of a live broadcast over the entire network. If Brandt doesn't apologize, he will certainly become a target of public criticism. No one has dared to do this kind of dishonesty in public. Just as Brandt was hesitating, several internet media had already reported Brandt had been slapped. Even the attitude of the fans started reversing, and the number of fans started dropping. "I will publicly apologize to Monster Heavy Industry in the next issue of 'Brandt Talk Show' Brandt quickly posted an update on his Facebook account..... Faced with this result, Ye Qing was a little stunned. Unexpectedly, a senior technician at Shanghai City Wastewater Treatment Plant would be the first to help Monster Heavy Industry prove the reliability of the ionization wastewater purification system. Ye Qing also saw Xu Fengling several times and had a good impression of him. So he made a special call to the Shanghai Sewage Treatment Plant and found Xu Fengling, thanking him for his help. Xu Fengling didn't expect his actions to attract the personal attention of the president of Monster Heavy Industry. Over the phone, he said he was uncomfortable and excited, and that he released this film in order to teach strangers about his watchful attitude." Mr. Ye, I heard you are going to launch a new energy car again, just... I intend to buy a car recently," Xu Fengling said enthusiastically: "As soon as your product will be released, I will immediately place an order." "No problem, at that time, I'll give you a 40% discount," at that time. Ye Qing was on the inner road of the Longxitan factory, and a car with an avant-

garde shape and a hanging roof design was parked at the side of the road.....Shi Lei.This is the name Ye Qing gave for this all-electric car. After hanging up the phone, he played with the car keys, ready to personally test his performance.Shu Lei was equipped with eight reduced standard plasma batteries, two synchronous rare earth permanent magnet motors, and four-wheel drive capability.It was only the first generation of mid-range energy vehicles to be released by Monster Heavy Industry. The high-end version of the black technology electromagnetic motor was still under development. But even in the mid-range version, the tech it carried was far more than energy and power. From the body structure to the windows to its control system, as far as you can think of it, it was packed with the latest technology from Monster Heavy Industry.This was the first electric car prototype, Ye Qing turned to the car with the exquisitely shaped car key, which looked like the scaled-down version of the Magic Crystal mobile phone.One button start?Keyless entry?These outdated technologies simply cannot mirror the technology of Monster Heavy Industry. The key in Ye Qing's hand was encrusted with a miniature fantasy display and uses dynamic secret key encryption technology. It could not only display the mileage of the car, but also the temperature inside the car. It could also remotely start, lock the car, and pinpoint the location of the car. It was just a key technique.Opening the door, Ye Qing gently placed his palm on the side window. The window of the seemingly ordinary car immediately woke up, five yellow openings appeared on the fingertips, then the fingerprint detection passed and it quickly turned green."Dong dong ~" The sleek electric car in front of him was followed by two clear unlocking guests.By the way, Shi Lei did not have mirrors like those in traditional cars. It could greatly avoid the worries of young drivers, as there was no need to worry about hanging up the rearview mirror when the parking space is too tight.... ...Translating the books is not easy, I hope book lovers who haven't subscribed can subscribe.

Chapter 627: Test its performance.

No rearview mirror?At present, no car brand has dared to cancel the design of the rearview mirrors on both left and right sides of the car. They play best with electronic auxiliary mirrors.The traditional left and right rearview mirrors are two rearview mirrors using the principle of reflection, and they help drivers timely understand the road conditions on both sides and behind the car. In addition, in the driving school, subject 2 "reverse and storage" hated by countless novice drivers must also rely on the help of these two small rearview mirrors.In addition, various countries have mandatory provisions for the automotive industry to install rearview mirrors and be able to adjust the steering.However, it is almost every automaker's dream to cancel the rearview mirror. It can make the car more aerodynamic and dynamic, and at the same time, the wind noise will be greatly reduced when the car is traveling at high speed.Shu Lei's rearview mirror was really not canceled but replaced by high-tech technology.Sitting in the transplanted seat of mechanical engineering chair technology, Ye Qing pressed the brake and pressed the key start button. The front and rear permanent magnet synchronous motors immediately went into idle mode and the cabin was also illuminated and on the central control panel made of Dream Display an adorable translucent elf has jumped out.It is no exaggeration to say that if Monster Heavy Industry's rapid-fire car is compared to foreign luxury cars in the market, it can easily kill all models under 2 million Yuan within seconds.The left and right rearview mirror screens below the A-pillar are Dream Displays that can be seen at head level directly upon the windshield like fighters.The upper part is almost integrated into the roof of the car, which saves a lot of space and is a multi-functional multimedia rearview mirror capable of perfectly filtering out ultraviolet rays, sunlight, and glare from high beams.Who has this equipment?The electric and only available extractor door on the BMW 7 Series is only the most discreet standard equipment in the entire series.Here everything that can be displayed

on a monitor is displayed on a dream monitor. Seat technology alone can cause the electrically adjustable seat in the BMW Seven Series to kneel on the ground. There are too many similar technologies and Ye Qing thought he might be unable to experience them in a day, and given, the heart of a car is its performance on the road, so Ye Qing took to do this experiment at the beginning and after some research, it switched to speed D. The driving method of the lightning car is the same as that of the automatic transmission car, but for a sports car whose price is fewer than 3 million Yuan, do not try to compete with it. Due to the characteristics of the electric motor, the torque of an electric car is much stronger than that of a fuel engine. If a traditional gasoline vehicle wants to burst maximum torque, it has to go through a series of gear changes to allow the engine's torque to slowly increase. However, the engine can directly explode at maximum torque. Almost every electric or hybrid vehicle on the market has powerful supercharging capabilities that can kill any gasoline car for the same price. The king of electric vehicles, Tesla, if you choose to install emergency accessories, it only takes 2.9 seconds to go from 0 to 100 km / h and more, which kills almost all the races in the market. On mobile video software, there are also videos of Tesla going from 0 to 100 km / h in a straight line, which kills Alfa Romeo and Ferrari in seconds. It's a shame that this data is nothing in front of Shi Lei. Equipped with two permanent magnets synchronous motors, digital four-wheel drive, within milliseconds, it can distribute the power to the four tires of the flash car. If you unlock the first-level emergency mode while driving, it only takes two to seven seconds to go from zero to one hundred. Of course, if the official production car wants to unlock in the first-level emergency mode, it must be equipped with certain restrictions. Such as driving age, time spent driving a thunderous car, and data collected by body collision sensors. If a curly novice driver always rubs and bumps while driving, then give them emergency mode, don't you want to send them to reincarnate sooner? The body collision sensor will record the owner's safety data while driving. The guy with the high collision rate can only drool while watching others play in emergency mode. Hanging up the equipment, Ye Qing directly used the authority to unlock the second-level emergency mode. "Master, in the second-level, unlock modes, your car can break a hundred in four seconds, please fasten your seat belt first." On the central control screen, the translucent elf who hasn't made a sound from the moment Ye Qing got in the car until now, suddenly raised his head and called Ye Qing back with a soft voice and cute, just as Ye Qing unlocked emergency mode and hit the accelerator. After stepping on the accelerator with his foot, the powerful back thrust feeling fixed Ye Qing directly on the seat, and the permanent double magnet synchronous motors also made a sound similar to that of an airplane engine, and with the particular increasing sound, Ye Qing turned Shi Lei towards Huanhai Avenue. "Gou Sheng, turn on dynamic driving data," Ye Qing also tested the smart assistant designed by Tianjin for Shi Lei. Gou Sheng is the name Ye Qing gave to the intelligent assistant. Users can name them according to their preferences, or choose the form and voice of the assistant. Plus now there are elves and beautiful girls to choose from. After formal mass production, users can pay to download more advanced smart assistants and purchase more skins and sounds. "Received, Master," On the central control screen, the translucent little elf nodded. When the car exceeded 100km / h, on the front windshield, a light green virtual head-up display similar to a hunter appeared. Suddenly, the cars in front of Ye Qing's field of view were all marked by this display with a small translucent square to write the boarding information, vehicle distance, and vehicle model. It was just too advanced and too much science fiction. If this function is activated in a crowded urban area, and there are pedestrians or inconspicuous moving objects such as pets passing by, the front windshield will be directly marked with a translucent red dot to mark the distance within 20 meters of moving objects to remind the driver. Of course, this high-tech front windshield built into a Dream Display requires money to install. "Gou Sheng,

turn on the wipers." "Master, it's not raining outside. Are you sure you want to turn on the wipers?" "Yes." "OK." "Gou Sheng, turn on the air purification system." "Gou Sheng, turn on the night driving function." "Gou Sheng, turn on the rear car monitoring system." "Gou Sheng..." "Ye Qing let the smart assistant activate more than a dozen functions at once. Finally, he simply lifted both hands from the steering wheel and let the car's auxiliary drive assist function run at 80 km / h. This car is the top-of-the-range version. While Ye Qing was playing with his cell phone, the smart assistant suddenly recalled: "Master, there is a Porsche Palamela behind you and keep turning on the lights." Ye Qing looked at the media mirror after hearing the words. Sure enough, there was a silver-gray Porsche behind. He held on to the steering and swerved the car into the far right lane. This entry-level Porsche gradually caught up with Shi Lei. Windows down, the young Porsche owner yelled at Ye Qing: "Dude, what brand is your car from? It looks so cool." "National brand." "Sounds pretty high-end, mate?" Ye Qing made a correct gesture, then walked over to the car window and silently unlocked the first-level emergency mode. "Vroom ~ vroom ~" The Porsche owner has roared the engine, planning to hastily take this domestic car and let him know a domestic car with an empty appearance is not the same as his car. "Om ~" In the first level emergency mode, Ye Qing stepped on the accelerator, and the Shi Lei car transformed into a fastball in a matter of tenths of a second, and the roaring Porsche transformed snail on site. Accompanied by a huge sound and waves, three seconds later the Porsche owner stared at the deserted road in front of him in astonishment... Since the taillights are invisible, the car is invisible. "This... This... What the hell is this??"

Chapter 628: Upcoming press conference about industrial buildings and automobiles.

It wasn't a ghost that vanished in seconds in front of our young Porsche driver, it was just pure technology induced in a car, and it was just the performance of the mid-range models, and When the reputation of the Shi Lei automobile is cultivated, Monster Heavy Industry will launch top-of-the-line models, which will ensure that the record set by countless luxury car racers is refreshed. Looking at the electronic dashboard, Ye Qing saw he could still travel 1,500 kilometers. So he wanted to continue driving this fast Shi Lei and take a trip that has just started. With this car battery charge, the world is big and he could go anywhere. The experience of driving the Shi Lei car was really great. Without the sluggishness and noise interference caused by the traditional fuel motivation, Ye Qing thought driving this car is like dating a girl, and with a heartbeat, every detail he saw filled his heart with beauty. Shi Lei also had a smart assistant, who always reminded Ye Qing of various situations on the road when needed, so that he did not need to frequently look in the rearview mirror, and if he got bored of driving, he will still be able to play with his tablet and take leisure time. What a pity! Until that time, Shi Lei did not even hang up the Chinese road permit, and could not travel on the China Continuous Line, and could not get to the city center. When the sky darkened, Ye Qing took the car back to the factory after testing the night driving function, he didn't notice any problems along the way, and of course, there was no need to make improvements. The next day, Ye Qing started planning the production baseline of Shi Lei Automobile, and before all that, Shi Lei Automobile is due to hold a press conference next Monday, and there are still five days left..... As a product of modern industrial technology, the production process of the automobile is very complex. In addition, unlike traditional cars, the manufacturer only has to manufacture the body and then assemble the accessories provided by various subordinate suppliers. But Ye Qing made this decision, most of the parts for Shi Lei cars have to be made by Monster Heavy Industry, including the glass and the seats, so for that, he has to design a huge production base, not necessarily among the top three in the world, not even among the top three in China..... Early the next

morning, Ye Qing was sitting in his office, designing the production base for the Shi Lei automobile, and waiting since nine o'clock for the new issue of "Brandt Talk Show". At that time, director Kong Tao knocked on the door and walked in and said: "Boss, the time for the Shi Lei car to be inspected has been determined. ~ It's tomorrow, the place is the Shanghai National Automotive Quality Supervision and Inspection Center. For the crash test, I did not submit an application, because it is not mandatory in China. With the inspection certificate of the automotive quality inspection center, we can focus on the domestic market. ~ There is also the opening ceremony of the Monster Industrial Building. In ten days, we will be able to finish all the decoration work, and then we will choose an auspicious day to hold the opening ceremony." "Ten days?" Ye Qing turned around and glanced at the Monster Industrial Building across the road, and saw a majestic building straight up in the sky. The building's glass curtain wall has been fully assembled. The factory-supplied silver-white metal support frame, such as a platinum frame inlaid with azure sapphire, uses the most perfect mechanical angle to support the blue glass curtain wall of the entire building. On the ninety-nine floor, when it opens, there will be one more skyscraper in China, the most technological skyscraper in the world. "It's not fast enough, isn't the Shi Lei car deployment meeting going to take place in the building's new science and technology center? ~ Let them find a way to speed up the process more quickly. If there is not enough manpower, they will make the building construction team maintain company employees. You can also help. We need to move the time to five days at most late so that in the morning we hold the building opening ceremony, and in the afternoon we will remake the Shi Lei car press conference. There will be two big news this day and I want to announce the two important things at the same time." Kong Tao nodded, and at the same time showed an expectant expression. He knew the important pick Ye Qing wanted to announce, the magnitude, which could shock countless people, not only in the whole country, but also outside the national force. He could guarantee that no company other than Monster Heavy Industry had the strength to carry out this plan. In dismissing Kong Tao, Ye Qing focused on planning the production base of the Shi Lei car, and unknowingly, the time quickly reached nine o'clock. It is nine o'clock at night in the United States, and the new program "Brandt Talk Show" has just started. Not only did Ye Qing wait for the "Brandt Talk Show", but Xu Fengling also waited at the Shanghai City Sewage Treatment Plant. On the Internet too, many Internet users have also been waiting for the "Brandt Talk Show". The relationship between China and the United States is also friend and foe. China aims to catch up with the United States as its biggest and most beautiful goal. On the American side, they despise China, not to say they despise any other country, but their life is inseparable from the various cheap and practical Chinese products. Even if they are reluctant, they cannot avoid Chinese products. Now, An American is going to apologize publicly to a Chinese company on TV. It makes internet users here in China feel great spiritual satisfaction. Believing that Monster Heavy Industry is not only a powerful factory but also can make Chinese people proud. It's not difficult to cross the wall, and there are a lot of people who know English. In forums, good people logged on to the official "Brandt Talk Show" site in the United States, preparing to open a live broadcast of the show. "Brandt Talk Show" started on time. After ten seconds of opening animation, Brandt in a blue suit appeared in front of the camera. Today it is a little different than usual. Without a smile, it seems the audience below him owes him \$ 5 million. It made Chinese internet users laugh, and the more uncomfortable Brandt was, the happier they were. "Hello everyone, this is Brandt." "Before the show starts, I want to apologize to Monster Heavy Industry who appeared on the previous show and their high ionization wastewater treatment system." "Sorry ~ I personally concluded before going through a rigorous investigation. I thought their products, like the ones from Amano Heavy Industry that triggered its bankruptcy, have huge technical flaws. The facts have proven

their products are not bad. If possible, I solemnly continue to hope the government can introduce this product, "electric power next week. ~ That being said, it is an all-electric car, probably very similar to our Tesla. ~ Well, in the electric car market everything is very small, and personally, I wouldn't buy an all-electric car, no matter what brand it is. I can only wish them good sales, and will wish good success in the European Crash Laboratory test." "...The apologies were average and the attitude was. Of course, Chinese netizens don't care about this, and Brandt's expression like a fly to the end can make them happy for a long time. Even some national online news media reposted this video. Although it doesn't make the headlines, the video has a much better click-through rate than a lot of celebrity lace news stories. At the same time, Brandt's latest blessing managed to grab the attention of internet users. Monster Heavy Industry will roll out an all-new all-electric vehicle next week. They really didn't know the news. Before the Monster Heavy Industry announced its launch of this car, it had made a breakthrough in energy. The national media were not at all interested, because high-tech companies around the world announced countless times long ago that they will launch in the electric car market, even netizens were oblivious to de such news, not to mention the media. But... Monster Heavy Industry will bring to the market this technology, which seems to have only been in the lab for quite some time, on the market within a week.

Chapter 629: A cheating little secretary.

"Monster Heavy Industry is going to produce electric cars? Oh my god, are there any products they can't make?" "Brandt is right. The pure electric car market is still very small. Tesla occupies 95% of the pure electric domestic family car market, but we rarely meet Tesla on our streets." "Monster Heavy Industry is really going to make inroads when it comes to energy. Huh? I remembered five years ago Samsung said it will release a battery with three times the energy density of the current mobile-phone battery. As a result, after five years, they have made no progress and even the project is closed." "If other tech companies are bragging about it, I have to slap them but Monster Heavy Industry... I really dare not draw any conclusions. I'm afraid of being slapped by it as it did with Brandt." "Recently, I intended to buy a car. What will the price of the car be? If it is less than 200,000 Yuan, I can think of buying one. If it is more than 200,000 Yuan, honestly I will buy one foreign brand car." "After learning that Monster Heavy Industry is going to launch a series of pure electric cars, Chinese net users suddenly felt strange and curious..... However, at the Amano Heavy Industry Company in Asashima City, after seeing this news, a man gritted his teeth and wanted to tear the Monster Heavy Industry to pieces. That person is Zhang Yutian. It was completely abandoned by Anqi Heavy Industry and Tianli Group. The old glory is completely flown with wings carrying his dreams away, soaring into the distant sky without him. He was fired from all board and company positions, and he was fined heavily, although he will make the decision to sell Amano Heavy Industry in its entirety, that will not be enough to compensate the losses it caused and in order to reduce the losses in time, the parent company simply announced that Amano Heavy Industry has entered the process of bankruptcy, and in this way, they can reduce some losses if the debts are insolvent. Now that the court has entered the process of liquidating assets, the United States has not arrived in a hurry. The domestic banks, which had greeted this news with a smile, immediately raised their butcher's knives. With the exception of Monster Heavy Industry, I'm afraid there isn't a company that doesn't have bank loans. It is an iron law that capital wants to make grow. As long as the business is big enough and the profits are good, the bank will treat you like an uncle, crying and screaming for you to borrow a loan. If a business is to grow quickly and stand out from its peers, it must use its own advantages to maximize the absorption of development funds. In this industry, real

estate plays the most fascinating role in bank loans. Five Yuan of capital can release 20 Yuan in loans. Large industrial companies like Amano Heavy Industries, on the contrary, are quite conservative. Amano Heavy Industry is burdened with bank loans representing almost 70% of its total assets, but in the eyes of banks and investors, it is a high-quality company that can only be called perfect, with loans of less than 10 billion in the long run. Today, this high-quality company has closed its doors and faces an astronomical fine in the United States. America? In the eyes of people like banks, even the assets of foreigners must first be executed by the bank. On the day that Amano Heavy Industries declared bankruptcy, various banks brought in people to compete for seals and assets. Everything was sealed, and even his deposit for the Gulfstream plane was refunded with a 50% discount by the National Bank in an extremely rude manner. The employees of the company put away their personal effects one by one and lined up to ask for their resignation. Some employees could no longer contain the disappointment and anger in their hearts and began to blast Zhang Yutian out loud in front of the supervisor, accusing him of breaking all of this and making them look for a new job. Zhang Yutian could only hide in his office, staring blankly at it all. "Mr. Zhang, are all the clothes in the office yours?" An executor appointed by the bank approached Zhang Yutian and asked him sternly. "Of course, these are all ready-to-wear clothes that I bought overseas. There are only three pieces of bespoke Brioni styles," Zhang Yutian sitting on the chair said in a panic: "What do you want to do? These clothes are mine. Are not personal effects....." "We don't care; we don't care about Brioni or Zegna." "You... you dare," Zhang Yutian was going mad: "I'm going to let my secretary come and prove that you cannibals don't vomit. You want to seal my clothes." "No need to cry." The sneer on the latter's face was thicker: "I think your young and beautiful secretary is much smarter than you." She handed over a lot of personal property certificates yesterday. There are three Patek Philippe watches alone, a Bentley / Mulsanne, and a Mercedes s 600. ~ By the way, Mr. Zhang, the Patek Philippe watches certified by your secretary are all limited quantity men's watches. Oh. Is this your idea... "Zhang Yutian was stunned for a moment, of course, these things belonged to him. Company bankruptcy is a business of the business, and there is no reason why the business should let it bear all the debts on its own. Therefore, the luxuries that he had accumulated during the weekdays and the three houses are the capital to guarantee his good life in the second half of his life. Now, these things were transferred by his trusted secretary?" "I... weed..." Zhang Yutian's lips were quivering.... Amano Heavy Industry has entered the phase of bankruptcy and liquidation, and the Monster Heavy Industry, after days of renovation and construction day and night, has already started finishing a high-tech building that can be mentioned in the Guinness World Record for many skyscrapers. At this moment, Ye Qing is standing in the President's elevator going up to the top floor of this skyscraper, examining his own private paradise. A single elevator could reach the ninety-ninth floor. If it was in ancient times, Ye Qing was to be punished for treason based on this number of floors. Because 99 means supreme and noble, only emperors can use it. But for now, no one will comment on this, except to provoke a lot of envy. With the exception of the decoration of this floor by the Chronicle Studio, all other floors were installed by the monsters. On this 99th floor, independent air conditioning, water, and power supply systems and special alloy steel plates were also installed in the precast concrete floor slabs under the feet. The glass curtain wall consisted of a multi-layered bulletproof structure, each capable of withstanding the penetration of at least two large-diameter sniper shells. The glass curtain wall was fitted with electronic sensors, and any damage will trigger an alarm, and because the ninety-ninth floor was at the top of the tower, the living area was only over 7 000 square meters. There was a pop-up helipad at the top of the tower. There was also a high-tech transparent office at the top of the tower. Standing in a 50 square meter office, Ye Qing could tower over the entire city of

Shanghai 36 degrees through the nonexistent glass curtain wall. Even the distant sea and the Longxitan factory barely appear. At that moment, Ye Qing's mood was extremely high, and a sense of forgetting sentient beings emerged in his heart, and everything in the world was as small as an ant. He seems to be the embodiment of the gods, controlling everything in the world. Suddenly, a phone ringing brought Ye Qing back to reality from the cloud fantasy. The call was made by manager Kong Tao, and his voice was full of unthinkables: "Boss... Our car Shi Lei did not... pass the Shanghai National Automobile Quality Supervision and Inspection Center test"

Chapter 630: Why not be qualified?

"Failed?" Director Kong Tao's words made Ye Qing feel bad. He just stood in his office which was hundreds of yards away from the floor; all the emotions he had ever felt had escaped. It doesn't make sense ~ Which of the indicators on the Shi Lei car did not work? The elements of the inspection test were obtained by Monster Heavy Industry from the Quality Supervision and Inspection Center. Ye Qing could guarantee that the three models sent for inspection were subjected to strict tests with the most perfect data in his home factory before being sent for quality control. "I answered there... it's the battery safety issue." ~ Our static test of the frame structure, material physics, and electronic test are all very good. High-tech rearview mirror technology using the low-light color camera has also been accepted. Everything is highly recognized. ~ The problem lies with the plasma battery. After testing it, they thought the plasma risk was too great. According to them, the chemical performance test area carried out special tests on the battery. Now if the battery is subjected to severe shock, and is damaged, the internal energy storage liquid will slowly volatilize after being in contact with air, which may release momentarily uncertain gas. These liquids will also cause violent combustion when exposed to an open flame. ~ They believe that plasma batteries do not meet the safety standards stipulated by the company. ""... "Ye Qing was unconvinced by the test results. The parameters of the plasma battery were clearly listed on the drawings of the monster factory. If they weren't just talking about safety, Ye Qing can definitely prove plasma batteries are much safer than any lithium battery or nickel-metal hydride battery on the market. Because the liquid energy storage materials of plasma batteries are converted from metallic compounds, at room temperature, this liquid material has the same stable characteristics as metals. Being sealed in the hull, whether violently struck or crushed by an external force, there is no danger of explosion and spontaneous combustion like lithium batteries or nickel-metal hydride batteries when meeting with airwaves, which is a characteristic of almost all liquid energy materials. However, the energy storage materials of plasma batteries volatilize very slowly and have low toxicity. Who would be willing to play with this? To say, gasoline and diesel will also be phased out. If you smell it too much, you will still feel dizzy. There is not much difference between encountering an open flame and burning and gasoline, but it should be pointed out that in a normal car accident, the probability of burning the whole vehicle due to gasoline is much higher than the probability of burning by a plasma battery. This is due to the placement of the plasma battery and the protection of two special cases. The eight plasma batteries carried by the Shi Lei are arranged in the middle of the body, which is the position between the front seat and the rear seat. Its thickness, including the protective shell, is 6.5cm, which is not as thick as the bottom of a traditional car and has to occupy a large thickness of the exhaust pipe. The shell of the plasma battery is made of multi-layered composite polycarbonate, which has strong flexibility. The outer protective shell is made of a nickel-titanium memory alloy, which can withstand attacks from standard rifles without damage. To put it bluntly, plasma batteries are definitely safer than limbs, and even safer than traditional fuel cars. Why? Ye Qing did not understand why Tesla and many lithium battery-powered

cars can pass the safety test, but Shi Lei with the plasma battery did not pass the safety test?" You call the Automotive Quality Inspection and Supervision Center again and ask them for more detailed reasons," Ye Qing was a little disbelieving, this feeling was like a pearl placed by a loan seeker in front of a pawnshop and the trader insists it is a glass bead, the thing that angers the loan seeker. Most importantly, there are only three days left until the launch of the Shi Lei Car conference. If this problem is unsolved, on the day of the conference, the Shi Lei car that failed the inspection center verification test will become an international joke?.....The Shanghai Automotive Quality Supervision and Inspection Center is located in the Automotive Industry Park. Here everything related to cars can be found. There is Toyota Motor Corporation, the International City of the Automobile, and Volkswagen's largest domestic production base. The China National Automobile Quality Inspection Center was born on the basis of these many vehicles of foreign joint venture brands. It is one of the most comprehensive technical categories in China and one of the testing centers with the highest level of technical equipment. As long as the car has passed the test, it can enter the Chinese market. Why? Why are Monster Heavy Industry cars blocked by the quality inspection center?.....At ten in the morning, experts from the physical materials testing area and the chemical performance testing area met in the huge testing center. This group of elderly experts has dealt with almost all models in the Chinese market, from Alto to Ferrari. Now this group was circling a new car that had just been sent for inspection a few days ago, he looked excited, just like when he was young and was testing the legendary Mercedes Benz. "It's art!" One of the beautiful old men sat in the cabin and kept his thumbs up. "This is the most perfect car I have encountered since I was young and tested hundreds of models. Before testing it, we were still shocked by Tesla's battery management technology. But in front of this Shi Lei, Tesla sucks is just rubbish. ""There is also this seat massage function. I don't want to come down from that comfort. ""Master Zhang, you can't say it everywhere, otherwise foreigners will be impatient." Another engineer who was sitting in the co-pilot chair and wanted to experience the seat massage function laughed. "I dare not say anything. It's not just Tesla. In front of Shi Lei, I have the impression that all the cars have become toys." Master Zhang sighed: "Before, we still had the feeling that although domestic cars have made great strides and achieved great success in low-end models, they lack a flagship model that can replace the Buick. Now this Shi Lei will definitely become our flagship product in China. When this car hits the market, it should replace this Buick. ""Look at the geometric tolerances of these parts, which have reached the standard of over two million cars, then look at the plasma cells fitted, this has been beyond my knowledge, this is cutting edge technology that does not belong at that time. ""My only worry now is Monster Heavy Industry has priced this car too high, and so I can't afford it. ""Wait for ~ Master Zhang, Master Li, won't you shoot down the Shi Lei car?" A young engineer standing by the car door was confused: "All other tests were awarded five stars. But the most important battery was disqualified. Why did you take turns renting their battery technology?" "Hey ~" Master Zhang said painfully: "This Monster Heavy Industry is still young after all. It has never been involved in the auto industry, and I don't understand the bars inside. ""We are also good to them." There was one person in the back seat, Master Li, who kept squinting in appreciation: "This battery technology cannot be overstated, but they..." Before Master Li's words were finished, a young staff member rushed to the testing area surrounded by a crowd of people and shouted: "Master Zhang, Master Li, Monster Heavy Industry called, and their manager asked us what was the reason for the failure of the battery test of the Shi Lei car. Even Tesla was able to get the certificate. Why can't they? We have to give them a detailed answer now. ""Well... you clear the floor first, and I'll call and explain later," Master Zhang looked embarrassed. As soon as the voice fell, another group rushed into the testing area. This group has an

impressive temperament. They all have a completely different temperament from ordinary people. They came in and asked without even saying hello: "Old Zhang, the kind of revolutionary drums you mentioned, where is it? Show it to me quickly." Note: Thanks for reading. Translate Books are not easy, I hope book lovers who haven't subscribed will want to subscribe.
