

M Factory 691

Chapter 691: The meeting of the big 3 giants.

"I'm here to tell you why network latency is so critical."

"The signal is invisible, but it still has to follow the laws of physics and cannot teleport from nowhere. Supposing point A is in the capital, and point B is in the city of Shanghai. The distance between the two points A and B is eight hundred kilometers, the time it takes for the electromagnetic wave signal to go back and forth is 0.008 seconds, and the response speed of normal people is 0.2-0.4 seconds, the signal propagation speed is much faster than the human neural response, the signal does not reach point B directly. It needs to be transmitted to the base station at point A and then transmitted from the base station at point A to the base station at point B. It also takes time to transmit files according to its size and rate, just like when we click the video, there will always be a little waiting time, which is the delay. If there is a delay, there may be a failure in the operating instructions for remote driving, and the instructions cannot keep up with changes in the user's current environment."

"Thanks to popular science upstairs, I told you that, I also think remote driving is not feasible, what if the base station is disrupted for a minute or two?"

"But the remote driving feature is really great. If it works, can't we people who can't drive, go anywhere we want?"

"If it's really developed, then I can drive and drink with confidence in the future."

Rest assured upstairs, don't even think about that wish in ten years.

"I say you don't care about the traffic fee when you own it. For long-distance driving, you need to send the image to the operation center through the Shi Lei car's panoramic camera. Don't take the car for a few hours. When you're done, you have to take the car to the cell phone company."

"It's stupid, 4G traffic. I watch videos every day and don't see the phone bill breaking four figures."

"Let's go. The Department of Transportation will not approve the release of this feature. These guys don't want to be meritorious, but they don't want to be wrong. This kind of controversial project, at first sight, must be unique."

"They said in the comments of this article so many things, and it all made sense," Ye Qing, who carefully read this article and netizens replied under the article, felt that this article was quite relevant and said gave an unbiased opinion and analyzed in detail the most difficult technical faults of remote driving. Especially this sentence, the transportation department does not seek merit but seeks fault, and it must be one-size-fits-all, and will not approve the launch of this kind of project.

But the questions they might think about, the technical team led by Ye Qing and Tianjin, of course, have already thought about it as well.

But...

The first time the Huge Industrial Monster submitted the remote driving project details to China's transportation department for review, it received a disapproval response in just two days. As for the reason for denial, they believed that in the existing model, remote driving has some security risks, unless

the Huge Industrial Monster can prove that in this mode, its network connection time is less than 15 milliseconds and give a reliable response plan after accidental disconnection and ensure the safety of unlicensed drivers and drunk drivers unable to operate the vehicle, and after the Huge Industrial Monster meets these requirements the relevant departments may sue project review.

Fortunately, Ye Qing was mentally prepared for this. The remote driving function of the Shi Lei car goes too far. Because once approved, people without a driver's license can ride alone and even drunk drivers can ride. This only upsets everyone's perception of road safety and if this safety is not strictly observed, it can lead to violent condemnation of the project by the public.

It's not bad the transport department can review this project, if this program was presented by a foreign company, you can make sure that it will not be undervalued. Even if this program is to be presented by another company, Ye Qing will not give up. Of course, he was convinced that he would finally receive approval because Huge Industrial Monster has a trump card.

.....

Hours have passed since the Huge Industrial Monster is updated to the new version of the Shi Lei car, and the remote driving news is also causing more and more discussion on the Internet. Some people have blamed the Huge Industrial Monster for starting to buzz about the concept, and it's impossible to wait 20 years for this project to come to fruition. There were also people who strongly this project, hoping that the sooner it can be done the better because it's great news for those who can't drive.

When the peregrine falcon flew over the African continent, crossed the Indian Ocean, and finally reached the skies over China. The news that the Huge Industrial Monster is going to engage in remote driving has also spread across the Pacific and Atlantic oceans to European and American countries.

Now the Huge Industrial Monster has entered the eyes of more and more European and American Internet users.

In the front there was the Magic Crystal mobile phone and the giant ship which heroically rescued people on the ocean, then there was the super-cute smart assistant who can soften people's hearts. Unknowingly, European and American countries discovered that a world-class industrial technology company had emerged in the Far East. Each of Huge Industrial Monster's products could strike people's hearts like lightning. However, this company seems to have a grudge against Europe and the United States, where it likes to hide its products and does not want to share them with foreign customers.

This time they are going to launch the remote driving feature?

When various science and technology magazines published articles about this function, they subconsciously compared the Huge Industrial Monster with their proud national companies. Then they came to the conclusion that domestic tech companies were garbage. Among them, Tesla was the most criticized.

At Tesla headquarters in Silicon Valley, Tesla CEO Martin hosted a major networking conference tied to the Huge Industrial Monster.

There were only three protagonists in this online conference, Mr. Martin, the general manager, Mr. Aklan, the director of the Office of Energy, and Mr. Bertram, the president of Raytheon Technology. The

faces of the three bosses appeared on the same screen. Their expressions were very similar, and they all scowl as if they had lost hundreds of millions.

"Mr. Bertram, what stage have you reached in Raytheon Technology's evaluation and testing of the application of plasma batteries in the military field?" At the start of the meeting, the director of the Energy Administration, Aklan, spoke.

The three of them didn't even have the proper etiquette to say hello, and it looked like a videoconference, which had happened more than once.

Raytheon Technology is well known as one of the US military's major defense contractors and most of its products are focused on military technology projects. At the same time, this technology company is also one of the few companies in China to have dealt with the Huge Industrial Monster.

It has been a month since the Energy Bureau learned of the amazing discovery of the Shi Lei car, and since that time the Energy Bureau has started the research for a comprehensive evaluation of the plasma battery, the military side was appointed to Raytheon Technology and the civilian side was handled by Tesla.

Compared to the arrogance and complacency in the face of the Huge Industrial Monster for the first time, the expression of the president of Raytheon Technology at that time was slightly impressive due to the extensive plasma battery research.

.....

Technology is a very intuitive thing, and the strong are admired. As for those superpowers that have thrown their pairs more than a dozen streets away, they will make their pairs despair and scare...

.....

"Testing of small electronic equipment has been completed, and testing of medium and large military equipment is underway. Projects include field radars, vehicle-borne drones, small special submarines, etc."

"What is the current conclusion??"

Several military projects reported by President Bertram made the director of the Bureau of Energy a little nervous.

"Very bad."

Raytheon president Bertram shook his head: "I mean we're in a really bad spot. We have three plasma battery samples. No matter what kind of device we plug it into, it works. It has shown surprising results, and it was able to show incredible matching ability. Charging on the drone increased the endurance of the drone by almost 4.5 times, and the special submarine will be tested in the afternoon."

"However, I am pessimistic about the test results because it destroys our confidence in the energy sector."

"I see, what about the civilian sector?" Commissioner Aklan sighed and turned to Tesla executive Martin.

"Our confidence was completely destroyed," Martin thought for a moment, then said: "Just yesterday, we noticed the Huge Industrial Monster upgraded a new system for the Shi Lei car. This upgrade, in addition to the original functions, in addition to optimization, also announced the launch of a remote driving function."

"I saw the news," director Aklan said: "Since the Huge Industrial Monster dared to come up with this plan, it had to make a breakthrough in wireless connection technology."

.....

The phrase that the military version is always one level higher than the civilian version is applicable in any country, especially China.

.....

"The Huge Industrial Monster must have a more powerful version of the plasma battery. We can notice the excellence of the plasma battery, and the energy department of China can do the same."

"When your testing is complete, these plasma batteries will be disassembled and analyzed and copied for energy storage materials. We cannot fall far behind in the energy fields."

"No, sir," Martin smiled bitterly: "We bought four Shi Lei cars through special channels, after all, the Huge Industrial Monster is the number one opponent of our Tesla company."

"Sell...sell me one," said Raytheon Technology President Bertram, embarrassed.

Chapter 692: A needle can see through the blood.

The period of the videoconference was not long, it was only a few tens of minutes. During which the three giants mutually exchanged information on the situation. Martin and Raytheon Technology President Bertram told Director Aklan in a worried tone that plasma batteries had great potential in the military and civilian fields. At the same time, Chief Aklan also gave them information that could be unobtained through normal channels.

The Huge Industrial Monster has collected the rare element metallic Dysprosium from all over. And due to their actions, the amount of Dysprosium metal in the Chinese market has been greatly reduced. Going forward, the market price of Dysprosium Metal will definitely increase significantly.

Metallic dysprosium?

Tesla CEO Martin was no stranger to this metal. Director Aklan euphemistically told them two points: "If their company also needs this metal, they must quickly increase their inventory in advance. In addition, Dysprosium metal must be one of the important raw materials for their plasma batteries."

Martin was a battery expert and knew that in some special batteries Dysprosium metal is really needed. But this amount of addition is not excessive, it simply acts as a catalyst in the material.

.....

In fact, it is not difficult to determine the material type of the Shi Lei battery. Take a few samples of the liquid energy storage material inside the battery and use the powerful mass spectrometry detection technology and spectral detection technology to analyze all components of the liquid material.

.....

In fact, this test has already been done by Tesla, since it quietly purchased four samples of the Shi Lei car and shipped their batteries to headquarters. The plasma battery of one of them was violently dismantled and used for analysis. However, the results of the analysis left Martin and the technical team in inextricable doubts.

These materials covered the three main elements metallics, non-metallic and chemical. These substances have different melting points and different reactions at room temperature. But what finally appeared in front of Martin was a plasma battery that turned to liquid and was extremely stable at room temperature.

Tesla already had a head start and had made the battery imitation. It was just that the technicians after gathering these materials, and regardless of the technology used to process them, the result found showed their combination can only be solid metal. It can't even store electricity...

Martin understood Tesla was in the greatest crisis in history. Not to mention the plasma battery, even a little smart assistant can hook them. This kind of feeling was indescribable in words, like an invincible cowboy who has been in the West for many years, suddenly one day he was shot by an unknown junior. He didn't even get a chance to draw his gun, and the hot beautiful girls around him were also robbed.

Martin was mad, depressed, wronged, angry, and helpless. It has been focused on the electric vehicle field for 20 years, but what about the Huge Industrial Monster?

People just did research. Whenever he thought of the sales report presented by the China District President last week, Martin had the impulse to duel with the head of the Huge Industrial Monster. Last month, Tesla's monthly sales in China fell 80% from the thousands of vehicles previously sold. China was not Tesla's main battleground, but it was the potential high-quality market that Tesla valued the most, as evidenced by the steady increase in sales in the past.

With the tightest control of the number of fuel vehicles in major Chinese cities, Tesla had made optimistic market estimates that in the next three years, Tesla's Chinese market will grow by 400%, becoming the largest overseas market base for Tesla.

Now, in the face of unforgiving reality, this beautiful dream is like a beautiful soap bubble, burst with a bang.

After the meeting, Martin could not calm down for a long time. He hasn't found any clues yet, and the Huge Industrial Monster will revive the remote driving function?

The layman does not understand the meaning of this function, but Martin can see it and is deeply terrified. Thinking about that, he picked up the phone with a bit of annoyance and called Gabler, the China region president. It must have been ten o'clock at night on China's side, and Martin knew the other party must not be sleeping. Sure enough, the call was connected before the third call waiting tone sounded.

"Boss, what are your orders?"

"Do you have any other news about the remote driving function of the Shi Lei car?"

"Boss, most Chinese and Internet technology news is unoptimistic. Many people think that this function is a bit tasteless, and it is technically impossible to achieve." China District Chairman Gabler's voice was very spirited, but he also ignored the feature and considered it a publicity stunt.

"Say your own opinion," Martin leaned back in the chair, his tone a bit erratic.

"I'm not too optimistic about this function, and boss, haven't we also studied the upgraded version of automatic driving for assisted driving before? Although we haven't successfully developed this function yet, the assisted driving function of the Tesla car. In the past, it has always been the number one in the world."

"Now the remote driving developed by Shi Lei Automobile, I think it's a compromised version of automatic driving. They have no technology and transferred all the electronic equipment needed for automatic driving to the Shi Lei car. The problem is solved by a remote connection in a disguised form."

"What do you think of the remote driving market prospects?" Martin continued.

"~ I personally think the future is very uncertain because, at present, Huge Industrial Monster adopts a mileage billing system to try this function. Who will buy a car and waste money to save time to be driven? Everyone should experience this novelty to the fullest. After that, he said it was inconvenient, and he left it and complained loudly. If you have this function, you better study driving automatically. It's the smart assistant that makes me feel a great sense of crisis."

"Haha~" Martin straightened up, but there was a hint of regret in his smile: "Gabler, your judgment disappoints me. Did sales drop like a cliff that blinded you? ~ Distance driving is a great technology that can be compared to Smartphones."

"If it can be achieved."

Gabler, the China region president, quickly lowered his stance and listened to Martin's words.

"You must understand that autonomous driving and remote driving are two technologies that are unrelated at all. The first is for the driver to be lazy. The presence or absence of this function does not affect the driving experience."

"This latest driving distance is actually aimed at potential consumers who don't have a driver's license."

"I ask you how many people have a driving license in China?"

"Three hundred million," Gabler said without hesitation:

"That's the problem. There are over 300 million people in the United States, and over 200 million people have driver's licenses. But China has 1.4 billion people, only 300 million of them with a driver's license and 1.1 billion without a driver's license," Martin's voice became erratic again: "In the United States, nine out of ten people over the age of sixty hold a driver's license. Most of the remaining 100 million people without permits are minors. But in China, only ten out of a hundred fifty-year-olds have a driver's license."

"Dear Mr. Gabler, what do you think is the purchasing power of these middle-aged and elderly people in China?"

"Strong..."

"Not ordinarily strong," Gabler said confidently: "The Chinese aunt's buying ability is world-famous. Chinese young people buy cars, six of which are paid for by their parents, and the same goes for buying a house."

Martin hummed in agreement: "That's why the concept of remote driving is nothing less than a Smartphone."

"The heart of remote driving is the Huge Industrial Monster that takes on the responsibility of the 'driver' to ensure the protection of these undocumented people. When the government of China approves this project, this brand new and huge virgin market which has never been opened will be occupied by the Huge Industrial Monster."

"I... I understand, boss."

China region chairman Gabler's voice was already shaking with a hint of fear: "As soon as this feature comes out, those who didn't have a driver's license and never considered buying a car before will also have the opportunity to buy a car. The Huge Industrial Monster will switch from remote professional driver to remote computer driving. She just wants to find the most perfect solution without increasing the cost of buying the car."

"It's true."

Martin paused and sighed: "The price of a Shi Lei car with its own class computer is intended to be accessible to 99% of consumers and to become a toy for the rich."

"The elderly population in China who can't even afford a Smartphone makes it even more impossible to afford a car."

"The ambition of the Huge Industrial Monster is unimaginable. They don't plan to make toys. They want to change the way Chinese people travel. It's unimaginable in a huge virgin market."

Martin pointed out the essentials that countless people cannot see clearly: "Remote driving not only solves the cost problem but also completely solves consumer concerns. The accident will still be Huge Industrial Monster's responsibility, and it will be paid by Huge Industrial Monster."

"I pray they won't be able to complete this project in 20 years. I also pray the transportation department of China will put the wheels in the wheels so that the project will never be approved if the politicians are pushed to the extreme!" Gabler begged fervently.

"I also hope..." Martin sighed for a long time: "Let's not talk about that, how are our Tesla sales in China now? Last week? I want to know the new data from this week's sales report."

"One by one," Gabler said in a sad tone: "In fact, last month we were able to sell 200 vehicles, all of which were customers who had paid a 50% deposit and could not request a refund. This week, we have no new order..."

Chapter 693: Repatriation meeting.

"Not a single new customer for a week? This world is so unfair..."

After hearing the news, Martin wished he could fly to China now and fight with the young chairman.

The phone call was over and the director of the Energy Agency, Aklan, was sitting on the couch, uneasy. Compared to Martin, who feared his business was threatened by sales shortfalls, Director Aklan was more concerned with the bigger picture, thinking about the impact of the Huge Industrial Monster on the United States?

This is the second time they have analyzed and studied Huge Industrial Monster's products. The first time there was no news in the press, but within the Pentagon, Huge Industrial Monster's product caused a lot of discussions.

It was the intelligence department that discovered the Huge Industrial Monster and cooperated with the Baojia Group to launch an alert robot. Baojia Group, which is located in the United States, is a defense contractor like Raytheon. Various weapons products of its products are supplied by this state-owned company to the Chinese military. Of course, they cooperated with Huge Industrial Monster, and they will naturally be noticed by intelligence personnel.

This is also related to the low security of the alert robot project. It was a low-sensitivity product expected to be rapidly promoted in overseas markets within a month and specifically aims to address the security issues of Chinese enterprises in Africa and desert countries.

In fact, after half a month, a watchful robot appeared on the African side. It was placed on the bank of the Nile in Sudan, while the 14th Bureau of China Construction was helping to build a bridge over the Nile. It is said that there was an armed robbery of the workers' dormitory in the area, so the Baojia Group sold them twelve security robots in one go. These powerful security robots, armed with machine guns, regularly stood guard around the construction base.

It is also this kind of alert robot that made the Pentagon realize for the first time that it was behind China in robotics and behind the Huge Industrial Monster. Luckily, the alert robot was just a security defense product, and suppressing those armed gangsters is like a god. However, when used in a great power confrontation, it will not have a good effect.

The Pentagon just thought that this idea was very good and the technical difficulty was not too difficult. They obtained similar robot technology materials after the collapse of Amano Heavy Industries and conducted research on similar products.

But...

But this time, the plasma battery has reached the key "equipment" level, and its appearance can bring qualitative improvement to China's military electronic equipment products. Especially in the field of unmanned aerial vehicles and small special submarines, it will bring an overwhelming advantage, and the United States, which has all the advantages, will fall from its throne.

After hesitating for a moment, Chief Aklan picked up the red phone on his desk. The appearance of such an old-fashioned phone from the 80s in this rather modern office, itself shows the peculiarity of this phone, especially since the director Aklan only pressed the 0 key.

"Hello, this is the President's office. I'm Assistant Weisz. Mr. Aklan, what's wrong with you?"

"I want to meet Mr. President and report back on the plasma battery," Aklan didn't need to be too polite to Weisz and certainly wouldn't put on airs.

"Okay, Mr. President is in Yellowstone Park, Wyoming, tending to food and clothing for the local bison. In forty-three minutes, Mr. President will be flying to Washington on Air Force One. ~ A video call on the plane. Well, I can organize fifteen minutes for you."

"Yes," Chief Aklan hummed.

.....

When the Peregrine Falcon flew over India, passed over Bangladesh, and entered China's airspace, Ye Qing called the company to inform them of its arrival. An hour and a half later, the department head went to the conference room for a meeting.

It has been almost three days since he left China. During those three days, although the company could contact him by satellite phone if anything happened, there was no way to report on the progress of the company's various project plans one by one.

For ordinary companies in three days, there may be a project that has not yet been discussed. But in the Huge Industrial Monster, three days were enough to set up the project and unblock the situation.

By the time Ye Qing set foot on the land of Shanghai City, it was already five o'clock in the afternoon. Except for the two directors who were on a business trip, the other department directors were already sitting in the conference room, eagerly awaiting his return.

Upon entering the meeting room, Ye Qing found that these normally stable managers were staring at him one by one with eyes full of suspense. They did not allow themselves to wait for him to bring them gifts. Besides, there was nothing to bring to this damn place in Nigeria.

"Boss... Have you reached General Mopu's mining area?"

"Naturally, the government of Nigeria signed an official document to transfer the mining area to the Huge Industrial Monster for 50 years," Ye Qing waved his hand, his expression still the same as before entering the door, he no-showed no complacency, it seems to be just a trivial matter.

However, it seems those managers didn't mean it. When Ye Qing declared the transfer to be unconditional for 50 years, the whole conference room was in turmoil. They stood up and clapped their hands like a slot machine, with proud smiles on their faces.

"Thank you, thank you, let's do the meeting," Ye Qing once again greeted everyone without moving from their seats.

"What's happening in energy service centers while I'm gone?"

"Here is the boss report, the construction of the first batch of 100 energy service centers has begun." Wu Xiaofan, the director of the construction department, smirked. He tapped the tablet several times, and the large screen on the wall immediately showed Ye Qing a familiar image. It was a photo of the

Tanjiawan International Automobile City in Bayu City. In the photo, there was no trace of the barren hills.

Instead, there are two long steel highways, rising directly from either end of Lot No. 1 and resting on the once barren hills. At the end of the road, an energy services center has taken shape, already in the photo. It was a black-brown asphalt square with an area even larger than that of the No. 1 plot. On the square stood beautiful columns with diamond-shaped polygons, the words Shi Lei Energy Service Center were on it engraved like a five-axis machining center, showing the strength and toughness of metal.

The main service center building had also entered the construction phase. By contrast, pitiful plot No. 1 was crushed underfoot, with only a few excavators clearing and leveling the ground, and only half of it cleared.

"Very well, then my German vice-president, Briganshaw, must be very happy to spend over 300 million to buy the first pitch."

"The next," The next photo was a photo of the Shanghai Energy Service Center: "Compared to Bayu City, Shanghai, which spans all of Pingchuan, was obviously much easier to build. The modular service center can erect the main body in about a week regardless of soil solidification time."

In the service center in this photo, the main structure was fully completed, and the interior decoration was transformed. Shanghai was the top priority of Shi Lei's automobile market, so it is also a construction project with the largest capital and labor investment, except for Bayu City.

After 20 days of construction and another five days, the Shanghai Energy Service Center can be put into operation. At that time, the country's first Shi Lei 4s store will be located here, attracting the attention of all over China.

After seeing more than 30 photos with different progress in a row, Ye Qing's mood became happier.

"Boss, I...I have some news that you won't be very happy with." After showing the photo, Yang Baihe, director of the propaganda department, carefully poured cooling water over Ye Qing.

Chapter 694: Where is the secretary?

Yang Baihe, the director of the propaganda department, is the president of Shanghai University's dance club and the goddess in the hearts of countless boys, is now separated from the campus greenery, and has brought the aura of a queen to the workplace, had an indescribably charming aura when she frowned and smiled.

Of course, Ye Qing was immune to these.

"What bad news?" Ye Qing waved his hand: "Go ahead, talk."

"It's related to the remote driving that we launched..."

"...The day before yesterday, we introduced the remote driving function to users. That night, there were car owners on the official site forum. We published a detailed introduction to the remote driving functions for them and asked them to give their opinion. Most of the users then had a negative attitude during the discussion, thinking that this function is not practical or technically impossible," Yang Baihe showed a helpless smile and explained: "Originally, it was nothing. When a brand new technology

product has just been launched, most people who are used to the original product will object, as the new product will change the usage habits they have developed over many years. At the early stage, if you don't understand a new product, you will naturally have to resist it..."

"...Just like in the days of the introduction of Smartphones, countless users and experts in the cell phone industry, have criticized these cell phones and complained about them saying they are expensive, big as a brick, don't even have a number button, Who wants to buy it?..."

"...However, from the day before yesterday until today, in the forum of the official website, it does not matter which section. The remote driving function has become more and more heavily criticized for some reason, and there is even a slight tendency to condemn it..."

"...We have received a large number of online complaints from customers over the past two days, and these were higher than the past two months."

Ye Qing's happy smile disappeared, which is really bad news. The number of customer complaints directly reflects the image of the Huge Industrial Monster in people's hearts.

~You should know 95% of the complaints received by Huge Industrial Monster are online channels, and there are very few people calling~.

Only users of Huge Industrial Monster's products can submit complaints via the Internet. Originally, the complaints received by the company were all due to a misunderstanding of the functions of the product. Now the number of complaints has suddenly increased by dozens of times, which must mean there is a problem with a certain link.

"It has something to do with our remote driving feature?" Ye Qing revealed a hint of doubt.

"Yes, boss, 99% of the complaints are strongly asking us to revoke the remote driving function."

"This function has not been launched officially yet, we just launched it as propaganda, how can we meet so many objections?" Ye Qing hadn't been in China for two days. On the flight home, he just watched the news online to pass the time.

"Somebody plays the beat."

"In the official website forum, some people are making a big fuss about the legitimacy of remote driving. They say the Department of Transportation rejected this project, but we're still promoting it. It's a joke about people's safety."

"Users, I don't know much about the details here, so I feel a bit angry."

"The news that the transportation department has temporarily rejected the project is unknown to the public. It seems that someone wants to do our 'article,'" Ye Qing smiled wryly and said Yang Baihe.

"The official website has issued a notice of explanation, and your propaganda department should also increase its efforts. You do not need to block these messages with ulterior motives. Now netizens have a high sense of distrust, and our blocking of these messages will only cause them to fall into suspicion and think we have a bad conscience. You open your jacket and use your professional technical knowledge to refute those with ulterior motives and bring the rhythm into common sense..."

"...Three days later, I have to see the complaint rate drop to less than 50%." Ye Qing hit the table.

Yang Baihe nodded.

Ye Qing turned his attention to the purchasing department manager and said slowly: "I have some tasks here and need you to complete them immediately. The mining area of Nigeria is related to the production of our Shi Lei vehicles. Therefore, we should invest the most energy and expand the mining scale of the mining area in the shortest time, relying on cargo ships, and it takes 40 days to wait each time, so I want to buy two cargo planes and rely on the power of aviation to transport materials and minerals in the beginning. So we can only buy cargo planes that have been in service with the airlines, because to place orders for new planes, we may have a long wait."

Qiu Yi was in charge of purchasing. The Huge Industrial Monster has purchased planes before and was familiar with this process.

"I need two cargo planes with a maximum load of more than 50 tons. Regardless of the type, the recruitment of drivers should begin immediately."

Yu Huali handed over the prepared employee form to Ye Qing: "The employees were very motivated. In total, more than 700 young employees came to the personnel department to register, and 100 employees were selected. We now invite institutions professional training to train these selected employees before going abroad."

The meeting did not end until seven o'clock in the evening. After finishing the working meal with officials, Ye Qing had to rush to the office to read the materials. It was the last thing he wanted to do. Sure enough, the moment he walked into the office, Ye Qing saw a pile of documents on the desk, which were more exaggerated than the official books of the college entrance examination year.

Ye Qing could only bite the bullet and sit on the mechanical engineering chair, pick up the few most important documents, and read them.

"I Q I Y I Film, Film and Television and Mobile Phone Co-development, a VR pay film application project proposal?"

"Shi Lei Automobile and the national highway, etc. Window network cooperation plan?"

"The second batch of National 500 Energy Service Center startup projects?"

Any project here that needs Ye Qing's personal approval, if released to other tech companies, it will definitely cause the other party, from boss to employee, to be confused. Because any project here involves cooperation projects ranging from tens of millions to hundreds of millions. Other companies can keep the project for a year, but in the Huge Industrial Monster, it's just an optional side business.

"Shit..." Ye Qing rolled his eyes; he would rather go back to Nigeria and take care of those black people than approve documents.

"Wait~"

"Where is my secretary?" Ye Qing suddenly frowned, the vast sea of documents reminded him of one thing.

At first, he wanted to find Yun Shi to be the president's secretary, but this girl asked for a leave. Ye Qing asked her colleague to tell her that when she returned to work, she would contact her CEO. How many days has it been?

Ye Qing racked his memory to remember the days and felt there should be ten days.

Ye Qing believed in the personnel of the propaganda department, and he was sure that the personnel dared not turn a deaf ear. Since Yun Shi hasn't come to introduce herself yet, that means she hasn't come to work yet.

Thinking about this, Ye Qing's teeth hurt, and he immediately picked up the phone and dialed his cell phone number. He didn't care what cannot be done, and he couldn't help but disturb her private business because of official business, and if this type of behavior bothered her, Yun Shi, did she still have rules and regulations?

Today, he didn't know why, and she had to explain why she hadn't come.

"Beep...beep...beep..."

The phone kept ringing until the dial tone stopped, and then Ye Qing looked a little angrily.

Opposite, oh my god!

Chapter 695: A little gift for her.

It is very necessary to form a team of secretarial assistants dedicated to serving you.

.....

The question that Ye Qing thought Yun Shi was the most suitable person to be his private secretary was really a bit wrong. It took him a lot of effort to calm his anger and pick up a document in front of him to continue checking it. He believed he still had a few things in Yun Shi's heart. When she sees the missed call, she would definitely call him back.

Sure enough, less than three minutes later, resisting boredom and reading the document taken, the phone on his desk rang. Ye Qing showed the expression "it's right", and the ancient god gloriously picked up the phone.

"Do you still know what to call?" Ye Qing hummed loudly into his nose to show he was in a very dissatisfied mood.

"... Ah!"

The other side of the phone was visibly stunned. The voice was clear and soft but full of surprises, which made Ye Qing very useful.

After waiting for two seconds, there was still no voice on the phone, Ye Qing sniffled again and said seriously: "Aren't you paying attention to me, Yun Shi?"

"No, Ye... brother Ye, I... what did I... do wrong?" The soft, low voice rang through the phone again, this time it sounded like she was crying.

"... Ah!"

"Shit!"

Ye Qing at this time quickly lost the file, looking at the caller's number on the phone, "Doudou", and sweating profusely. This time the misunderstanding was great. He thought Yun Shi had called back, he didn't even look at the caller's name and answered directly, and it turned out to be a mess.

"Doudou, listen to me. Just now, I thought it was an employee who was calling. One of my employees requested a leave of absence and she has been absent for more than ten days. I thought it was her..."

"But the hand... The phone clearly has a caller ID," Bai Douer's voice was sobbing clearly and was extremely aggrieved.

"I was just looking at the documents, and I put the phone next to me and picked it up when it rang. I called the employee a minute ago. I really thought it was her," Ye Qing quickly shortened the time between calls; he shortened it by two minutes and was in a hurry to explain the cause and effect of the call.

"Woman... employee?" Bai Douer didn't believe Ye Qing's explanation, because she was the real victim. If not, then why Ye Qing suddenly turn around and hurriedly comforted him after hearing her own voice. After listening to his explanation, she realized the previous phone call must have been to an employee with an unusual relationship with him, because this number is Ye Qing's personal number.

"Yes..."

Ye Qing hardened his head and told the truth: "Her name is Yun Shi, and you have seen it before. Originally, I wanted to adjust the assistants around me and fill the office with secretaries to ease my burden of work. But she asked for time off, and it's been more than ten days. Can't I get mad?"

"It's... the one with silver-gray hair and who is very beautiful?" she held back her tears, but she couldn't hold back her grievances.

"Yeah~ although Yun Shi is a little younger, she has a very strong working ability. She used to sort out any documents in my office before, and she is so powerful no one can say anything in front of her in the computer office."

"You...don't like it? You don't want her to be my secretary?" Seeing there was no voice on the other end of the line, Ye Qing explained: "She's not the only one in the office. After all, in the institution, there shouldn't be at least five persons?"

"Ah~no,"

.....

It's wrong if I say she wasn't worried, she can't help worrying, she went to his office several times, and there's more than one Yun Shi in it. In the company alone, there is more than one beauty that strengthens the company, take an example, this manager, Yang Baihe; she is incredibly good in her body, her appearance, and her temperament, then there is the great star Xu Ningong, a valiant classmate, the flower of cinema...

It's like this if there was only one pretty woman next to Ye Qing, and she talked about a hundred things, she had to keep an eye on him all the time. But if there were a lot of them, she had to leave him alone.

.....

"Brother Ye, I actually called you to ask if you were free at night," she sniffled like a kitten: "You just got back from Nigeria, and I'm afraid you couldn't do well eat there. I want to go with you to Caiyi Street to taste the local dishes."

"Available ~ Where are you?" Ye Qing smiled happily and finally had a reason not to look at the materials.

.....

Around 8:30 in the evening, Ye Qing went downstairs to the company; he went to wait for Bai Douer. Although there was a little misunderstanding between the two of them, he thought it would be more perfect if he could give her a little present. Thinking about this, he remembered that General Mopu gave him a bunch of African-style gifts, but Ye Qing had given Bai Douer some of these gifts before, and it would be a bit embarrassing to give her again this kind of gift. He felt a little too hard in his heart.

"That's right," Ye Qing remembered that when he had a video call with Tianjin yesterday, the latter proudly showed him some new things. There seemed to be one, which was very suitable to be given to Bai Douer.

Thinking of this, Ye Qing took the elevator reserved for the president and arrived at the third basement. The first floor of the civil air defense project then opened a few explosion-proof mechanical locks, went to another special elevator, and arrived at the laboratory hidden deep underground, the laboratory at this time has many more instruments than there had some before his last visit.

Tianjin was not in the main control room on the first floor, and Ye Qing did not look for him. Instead, based on his memory from what he saw in yesterday's video, he found a rectangular engineering plastic box in the metal display case next to the Watcher X. He opened the box, and four shapes of "strange flying animals" appeared in front of him.

They all have wings, but their shapes cannot be related to birds. These are four small bionic drones of different shapes. These four little animals are about the size of eggs. A little black flying dragon curled up. The second is a cartoon-like white flying insect. Ye Qing directly picked up the third. It was the cutest and most beautiful of them because it was a big flying dolphin.

They were gadgets made by Tianjin when he had nothing to do and was bored. These four little flying animals were specially designed to record various videos in the experimental laboratories.

In any laboratory, a camera will be used to record the entire experimental process while performing experiments. Under normal circumstances, the experiment has a special person responsible for taking video data, which is reserved for later analysis and summary use. But here it's a bit of a waste to have a monster in charge of video recording.

Tianjin simply made four automatic shooting drones. They were equipped with 3D cameras. After starting, they have the ability to lock faces and lock hands, and stably track users' shooting.

The control of these drones was very simple, and Tianjin also made four induction loops. Just put a ring in your index finger and then you can remotely control the flight altitude of the drone through the movement track of your finger on the palm of your hand. To take a high definition photo, lightly press the ring on your finger. If this gift is given to Bai Douer as a flying selfie artifact, she must love it!

Recalling the first time, they met, when Bai Douer used a selfie stick to photograph Ayun's snack bar, Ye Qing felt very sweet and cute.

"Boss, what are you doing?"

Tianjin's voice echoed from behind, making Ye Qing shiver coldly: "You scared me, and I'm playing with your drone."

"Boss, then you will take the first little black flying dragon." Tianjin shook his ears and looked at Ye Qing with pitiful eyes: "The little dolphin is mine."

"I...I plan to give the little dolphin to Bai Douer, and you can make another one," Ye Qing directly put the flying dolphin in his pocket.

"Hmph..."

"As a gift, just take a goose feather," seeing the little dolphin was gone, Tianjin felt very distressed: "Anyway, she will like whatever you give her."
