

One Planet 192

Chapter 192: Final List! Top ten cards! Preparation before the entrance exam!

Tang Qingqing naturally regarded the other two as rivals.

Tang Yushu did not answer this question directly.

Instead, she projected the communicator and said, “The latest Heavenly Pride Ranking has been released, so look at it yourself.”

Tang Qingqing looked over with a hint of curiosity and nervousness.

After a while, her eyes suddenly widened!

“How can this be possible!”

Tang Qingqing was a little surprised and said: “How come Bu Jing Yue suddenly jumped up to the top 100?”

Although she also saw her own ranking.

Her ranking had the same surge.

She came in the top five thousand but compared to Bu Jing Yue it was not even close.

Tang Qingqing couldn’t be happy at all.

“Bu Jing Yue’s teacher is a level five planet master, and should have given her very valuable resources.”

Tang Yushu guessed a little.

Then she looked at Tang Qingqing and said, “But you should not be discouraged either! With your current strength, your true position is at least in the top two thousand of the Heavenly Pride Ranking! Just take it easy in the next few days. It may not be impossible to reach the top thousand, or even..... a higher position!”

Tang Qingqing nodded, her face showing a hint of determination as she said, “I understand. I can’t compete for this number one spot. Then I will compete for the top one thousand, the top five hundred, and get a ticket to a super first-class university!”

“In the next few days, your cultivation of those magicians and warriors will stop for a while, with grinding training as the main focus, and I will do my best to help you develop tactics.” Tang Yushu said with a solemn expression.

Even if she was an admissions teacher at Tianxing University, she could only try to use some of the school’s resources to help Tang Qingqing.

In the matter of admissions, there was not much to be done!

Everything was determined by the results of the entrance exam.

If Tang Qingqing didn’t play well and didn’t get the grades required by the top universities then Tang Yushu can only watch and sigh!

“Okay.”

Tang Qingqing nodded, then suddenly remembered something, and asked, "What about Jiang Fan? Where does he rank?"

"Jiang Fan's ranking is very low."

Tang Yushu said indifferently, "I don't know what's going on, but he's not the one you have to worry about anymore."

There were only ten days until the entrance exam, everyone else was solidifying their current level.

In turn, Jiang Fan accelerated the flow of time slightly and continued development.

The Xia Kingdom was changing with each passing day.

Of course this was within the Great Desolate Army.

The people out there didn't feel any change at all.

The steam train was born a few years ago because there were too many aspects involved.

It was stopped by Yan.

The current Xia Kingdom was preparing for the matter of glory conquest!

Tens of thousands of scholars, hundreds of thousands of logisticians were working closely with each other like a huge machine to bring out the maximum performance.

There was also a group of talented scholars led by Yan.

It also spared no effort to carry out research and development one by one.

It could be said that it was a nationwide effort!

The outbreak of power was also very frightening.

One result after another was born!

It was completely unstoppable.

Shortly after the invention of the semi-automatic rifle, the automatic rifle came out!

With the introduction of the automatic rifle, a new and terrifying killer was conceived by many scholars: a rapid rifle that could fire bullets automatically!

In terms of ammunition, there had also been an amazing improvement during this period.

After the yellow gunpowder, another crossover product:

Ladder within a ladder (TNT) was formed!

Since then, it had replaced the previous yellow powder and became the mainstream of gunpowder!

After that, there was another chemist who took it one step further and invented the "smokeless gunpowder".

This made many of the envisioned high-powered weapons possible!

There were also some scholars who were obsessed with the research of machines that could fly to the sky.

However, this was a bit beyond the times.

Naturally nothing was accomplished and in terms of theory, Yan's research on energy had made a breakthrough during the same year.

The first law of thermodynamics had since been discovered!

It was also known as the "law of conservation of energy":

Energy neither rises nor disappears out of thin air; it is only transformed from one form to another, or transferred from one object to another, while the total amount of energy remains the same.

Despite being busy with various technologies, it was not very practical but for the second technological frenzy that followed, it played a huge role!
