Chapter 150 Mark's Quadra-Barreled Weapon

"Okay, shotgun barrel-check; machine gun barrel-check; grenade barrels-check; curved triggers of the same size-check; recoil springs-check; shotgun cylinder-check, safety pins-check..."

One after another, Mark inspected each and every part that the robot made during the past four hours. Most of it is made of titanium but as 1kg of slab provided by the system wasn't enough for the weapon, stainless steel, and aluminum alloy were also used.

He couldn't hide his smile when he saw how perfect the measurements are. Not even a 1mm error occurred when compared to his instructions.

Originally, the Tigon-3 was supposed to be a twin-barreled fusion weapon between a fully-automatic shotgun and grenade launcher but after the battle, Mark suddenly changed his decision to modify the weapon design.

Without taking sleep, he returned to the factory and added a few things to make it more complex. To simplify it a bit, he changed the shotgun into semi-automatic and reduced its ammo to 6.

Thankfully, the assistant robot didn't have any feelings and just worked its best to match the provided instructions.

Back to the present, Mark started to assemble the parts. Although the robot can do it, since this is the first weapon, he wanted to assemble it himself.

It took a while for the entire weapon to be assembled before he handed it to the system for the rubber grip at the handle, the paint, and the quality check.

***Ding! Analysis finished. No errors. Please test the weapon for the final check.**

The notification arrived while returning the firearm to Mark.

He grabbed the lengthy magazine with his right hand and the handle grip with his left hand. "Damn, this is one heavy weapon."

The new finished weapon is a Quadra-barreled with the longer one on the top and the shorter one on the bottom. The 28.5-inch barrel is a shotgun and the 43 inch long and thin barrel is to shoot the 7.9mm bullets.

Apart from those two, there are two more 15inch barrels, one on the left and right respectively, which are used to launch the grenades.

There's a rotating cylinder with six rounds nearby the triggers. This shotgun works the same principle as the revolver. So, there's no need for the fore-end and the action barrel to load the shotgun shells.

And before the rotating cylinder lies a lengthy magazine, capable enough to hold 30 rounds of 7.9x57mm bullets.

Placing it on the table, Mark opened the gallery and first clicked on the attachments section. Only one was available. The rest are grayed out. He clicked on it.

*Ding! Telescopic sight (scope) has been successfully created.

He installed it on the upper barrel.

Mark then clicked on the 40mm grenade.

*Ding! 40mm ammunition is in the list of exclusive sales. Do you wish to create personal or for the sale?

"I wish the system wouldn't ask this, every time." He let out a sigh and clicked on the second option.

Whenever Mark created the shotgun shells, the system will always send him a notification.

If it is personal, then, the system will charge the money but if it is for sale, then, he wouldn't be charged.

As for the normal sales ones like bullets and other weapons, which are available for everyone, the system wouldn't charge him beforehand. It would let him create for free but would charge him when he used it for himself.

And of course, the weapons like missiles and all, which aren't for sale, they will also be charged at the creation stage.

***Ding! 40mm ammunition has only a 60% success rate of creation. Proceed?**

"Yes"

***Ding! You failed to create a 40mm grenade. The success rate increases by 6%. 5 gold coins have been added to the debt.**

***Ding! You failed to create a 40mm grenade. The success rate increases by 6%. 5 gold coins have been added to the debt.**

"Damn, my 7 points of luck isn't helping here." Mark clicked on the creation once again.

*Ding! You failed to create a 40mm grenade. The success rate increases by 6%. 5 gold coins have been added to the debt.

*Ding! You successfully created a 40mm grenade. 5 gold coins have been added to the debt. Please check out your inventory.

*Ding! You successfully created a 40mm grenade. 5 gold coins have been added to the debt. Please check out your inventory.

"Okay, next..."

Mark then proceed to click on the 12 gauge shell.

*Ding! 12 gauge ammunition has only an 80% success rate of creation? Proceed?

"Yes"

*Ding! You successfully created a 12-gauge shotgun shell. Please check your inventory.

After creating six of them, he loaded them into the cylinder and the grenade went into the upper barrel.

He finally went to click on the ammunition for the machine gun. It was the same ammo that is used in the Panzer.

*Ding! You successfully created 7.9mmx57mm ammunition.

"System, where should I test it?" asked Mark.

*Ding! Anywhere in the outside world. Once it is successful, the system will provide a testing ground for the host.

"Okay, that's good." Mark nodded and placed the weapon in the inventory.

Back to the real world, he opened his eyes and turned his head, "Alina, let's go outside."

Alina nodded with a smile and stood on her feet. Mark did the same before walking outside the tent.

As soon as they left the tent, Mark felt several gazes from the soldiers. Lei Jin hurried towards him and greeted him with a deep bow, "Lord Lu."

"Inform General Shang Wen that I'm going to test my weapons. If he's available, he can meet me there..." Mark pointed at the rock formations, located far away in the distance. It was on the opposite side of the dungeon portal.

He and Alina started to walk away without bothering to wait there any longer.

It's not that he wanted to act arrogant or something. It's just that Mark was too impatient to test his weapon to care about anyone else.

About fifteen minutes later, Mark was about a kilometer away from the campsite but still continued to walk towards the location. He wanted the testing location to be far enough from the people so that no casualty occurs by mistake. A secure location will also make it difficult for anyone to spy.

As he was walking, Alina reported to him a piece of important news, "Big Brother, a person in 7-circle realm left the campsite and is traveling towards us through the air. I believe it is Shang Wen."

Mark stopped in his tracks and turned around before raising his head. Like his Android assistant mentioned, it was Shang Wen who was seen flying with his blazing fire wings.

Within a minute, the second prince reached them but didn't land before him and just continued to fly.

Mark understood in one glance. "Well, I guess this guy has his own pride..."

He continued to walk. In the meantime, the second prince landed at the rock formations and patiently waited for half an hour until the two of them get there.

"Your Highness" He bowed slightly, following the etiquette despite not wanting to. The second prince returned the greetings with a simple nod, "Lu Zhen."

With his arms crossed behind the back, the second prince said, "I heard that you wanted to meet here."

"Let me test fire my own weapon. Then, I'll demonstrate the rocket launcher I showed you the other day." Mark replied while taking out the newly created shotgun-grenade launcher.
