

Smash All 21

Chapter 21

Can I fix it, weve already bought all the materials.

Tai Wude: Shit, he was obsessed before thats why he believed Wei Sans nonsense.

Dont worry, Ill fix it for you before school starts.

Although she accepted the job of repairing the mecha, Wei San didnt leave her other activities behind. She just took time out of her day to go to Tai Wudes house.

Tai Wude was frightened as watched his mecha get torn to pieces. He regretted why he believed Wei Sans words before falling asleep every night.

The ornamental mechas had no requirements for perception grade, so the attack power was equal to zero. 700000 star coins sounded like a lot of money, but in fact, it could only transform the hardness of the mecha shell and the engine. This was because the Wei San compressed the engine material, so it only cost 700000.

For the transformation of the mecha shell, Wei San placed it last. First, she repaired the broken engine and increased the power source.

Ka

Wei San installed the engine and got up to Tai Wude who was biting his nails, saying: Try it.

Tai Wude pointed to the mecha: You didnt even place the shell on!

Dont worry, it wont fall apart. Cant you just try it first.

Tai Wude climbed up to the mecha operating room gingerly and tentatively moved around: Yi? It really could move.

He controlled the mecha and walked around the training room. He was overjoyed: Its fine now! It was more flexible than before.

Ok enough, come down first. Let me change the shell of the mecha and then install it. Wei San doesnt have much novelty regarding this kind of mecha. The simple commands in the control room couldnt attack at all. Occasionally going in to control the mecha for a walk was more like it.

Tai Wude came out from the inside and verbalized excitedly, Where did you learn this technology from? Its very powerful.

Wei San had just put on gloves to melt the Youjin. This material was too expensive. She planned to add Youjin to the joint of the mecha. For the other places, forget about it.

It wasnt until the day before school, Wei San finally transformed Tai Wudes mecha. He manipulated the mecha and walked around outside. When he came down to see Wei San, his eyes expressed a different meaning.

Wei San, in the future Ill coverAfter her eyes swept over, Tai Wude immediately changed his tone, We, we are brothers!

Wei San didnt take it to heart. Its already a happy thing to practice with mecha.

Hiss

Before dawn, Wei San curled up on the bed in sweat and took a breath of air conditioning while hugging her legs.

She has cramps again.

After enduring for a long time, Wei San slowly recuperated. Her face was pale and half against the wall.

In her original world, she had never had such pain during her development, and now she has cramps from time to time.

Wei San grew quickly, but her muscles couldn't keep up. Her body was as thin as a hemp stalk even if the teacher's mother supplemented her food with fish and meat everyday.

Wiping the sweat off her forehead, Wei San came out of the room and just happened to meet Li Pi.

On the first day of school, you're so unenergetic. Li Pi glanced at Wei San, Another cramp?

It's nothing.

Li Pi frowned: You should eat more normally. Later, I'll ask your Shiniang to cook more delicious food.

Chapter 22

After breakfast, Li Pi brought Wei San to school.

At the beginning of the new semester, the atmosphere on the first day was different from before.

Haven't you guys heard? We have a chance to touch mecha this academic year.

Mecha? ! Is that the one I am thinking of?

Of course, our institute has a mecha, which is specially used to practice for the graduating students. It will be used every week.

Wei San listened to the discussion among the students. She didn't know about it yet. Li Pi didn't mention it to her.

Before the first class and after the schedule came out, everyone was excited.

There really was a mecha practice class!

After the morning passed, all of Class B exchanged news and knew which class was the first to take the mecha class. Their envy was almost overflowing. They also wanted to see the real mecha as soon as possible.

Wei San was also very excited because it was said that the school's mecha was a combat mecha.

When she went back for lunch at noon, Wei San couldn't help asking Li Pi about it.

Li Pi lifted his eyelids and looked at her for a while: It's really a combat mecha.

Wei San didn't say a word, waiting for him to say the next sentence.

In the next second, Li Pi said, It was a Class B mecha many years ago. Now it has been basically eliminated.

Wei San thought so in her heart. When she heard that each class had a mecha to practice, she felt it was a little wrong. When did the school become so rich?

Li Pi looked at Wei San positively: If you can enter the five big military academies, this mecha won't help you much. There is a world difference between Class A and Class B. People are like this, mecha too.

It's always good to become familiar with the mecha first. Wei San smiled and said.

Li Pi nodded and then asked in return, I heard you repaired the mecha for the Tai family?

En.

When did Xiao Wei learn to repair mecha? Shiniang placed the dishes on the table and asked curiously.

Wei San was a little embarrassed and said, Actually I wanted to report to the preparatory mecha engineering division before. I was greedy for cheap tuition and registered for the wrong major.

Li Pi: No wonder she has been trailing for the past few years. All kinds of training was done quite perfunctory.

Its been hard for you. Li Pi snorted coldly.

The class next door was the first class to take the mecha practice class. At recess, many people who had a good relationship with the class next door ran to ask what they felt.

Wei Sans class has always been at odds with the class next door. Although there was no one who went over, the class next door couldnt help walking back and forth to show off, standing at the door and loudly discussing and describing the mecha with others.

Shit, Tai Wude from next door is coming.

It must be to show off. Im speechless, sooner or later we will come into contact with the mecha. What are they proud of?

With a fistful of skewers in his left hand and a box of cut fruits in his right hand, Tai Wude swaggered in and looked around, which successfully aroused the anger of the class.

Wei San! Tai Wude jumped up in front of Wei San, placed the fruit on her table and handed her the skewer, Do you want to eat it?

Whats up? Wei San sniffed the smell. The skewer smelled better than before.

Tai Wude said a Hi and flattered her, Everyone is friends. How about you help me solve this sinful thing?

If you need something, just say it. Wei San then took a bite of the skewers and shook her head. This thing is too sinful.

Tai Wude coughed: Its like this, in the future, we all have to learn mecha practice. I think we can exchange skills with each other and work together.

He thought Wei San could even repair mecha, so her actual operation of the mecha should not be bad.

Wei San bit the kebab and looked up at him: It should be fine to communicate with each other, but lets forget about forcibly working together.

The author has something to say: Wei San: Let me solve these sinful things!

*Same, let me solve these sinful things D;

Tling this novel makes me hungry

Chapter 23

When it was Wei Sans classs turn to practice the mecha in their class, Wei San was also excited. This was her first contact with a real combat mecha. Although it was only an eliminated Class B mecha, she couldnt help but be excited, especially since Wei San was a mecha fanatic in her heart.

First of all, lets get to know the several main parts of the mecha for later operation. Li Pi pointed to the gray green mecha, introducing several parts of the external mecha, and then opened the light brain to project the internal cockpit of the mecha. The cockpit is generally controlled by head connection and manual hand operation, which also means that spiritual perception and hand speed are the two important factors to evaluate a mecha fighter.

Everyone listened to Li Pis explanation with a bated breath for fear of missing a word.

have you guys memorized it clearly? After Li Pis introduction, it was unknown what he clicked on, but the cockpit suddenly opened. Its better for you to experience it yourself. Now, come up one by one according to your student number. Each person has 15 minutes of practice time, 108009, come up.

Their student numbers were lined up according to the number of sessions+the first time they stood in line at the beginning of the year, and the number of times was added to the middle during the examination. Although the numbers of students transferred and dead students were not used, others still maintain their original student numbers.

Everyone looked at 108009 with envy, but they soon realized that the operation of mecha was not a simple thing. Fifteen minutes later, 108009 barely let the mecha take one foot. When they came down, they were sweating.

Not bad. You can make it move the first time. Li Pi praised.

They thought Li Pi was being comforting. As a result, the students went up one after another. Everyone who came down seemed like they were sprinting for more than ten kilometers, sweating all over. However, the mecha basically didn't move much.

Dozens of students went to practice one by one. From early morning to evening, few people could make the mecha move, and these few people were basically the top few on each test. They were above grade B and may rush to Grade A.

108429 come up. Li Pi's eyes fell on the last student.

Wei San stepped forward and quickly climbed into the cockpit.

At this time, all the students at the bottom cheered and opened their eyes to see how far Wei San could control the mecha.

Although the results of Wei San were average in previous years, she performed well last year. Even Tai Wude from the class next door could be pressed and punched, so it was difficult for them not to have expectations.

It was said that when Tai Wude practiced for the first time, the control mecha walked around the playground.

Walked around?! Hes this perverted?

After all, his perception is grade A, and there was a level advantage in manipulating grade B mecha.

Wei San should be better than Tai Wude.

Thats for sure.

Wei San sat in the drivers seat and put on her helmet. She could feel the current passing through the temples on both sides. She swept the control board in front of her. She remembered the function of each key just said by Li Pi. She tried to press it. The mecha occasionally opened its arms and turned into a knife stab or shell barrel.

These movements were not uncommon. The students in front had all tried them.

Wei San closed her eyes. She was decomposing the structure of the mecha in her brain. She couldnt figure out some things.

If only this mecha could be dismantled.

Wei San regretfully opened her eyes and then tried to control the mecha to move forward.

Ai, it moved, it moved.

The sharp eyed student pointed to one foot of the mecha and said excitedly that Wei San was really powerful.

Seeing this, Li Pi immediately smiled, but the next second the smile froze on his face.

Bang

Wei San fell to the ground with the mecha.

There was silence in the venue, and everyone:

Chapter 24

After that, someone finally spoke, Haha, this range of action sure is larger than everyone. It should mean something very powerful.

Others: There's no need to blow rainbow farts.

Li Pi frowned and forced open the cockpit. He saw that Wei San had fallen inside and there was no movement.

Wei San, Wei San!

Ah?

Wei San vaguely heard someone calling herself, and subconsciously replied.

You come out first. Li Pi's face was ugly. Seeing Wei San like this, he couldn't help but have a bad guess in his heart.

With so many students, its not that he has never seen anyone with low perception but strong physical quality, but Wei Sanhe doesnt want this to happen.

Wei San climbed out in a daze, turned her head and looked at the fallen mecha, turned back and said to Li Pi, Teacher, Im sorry.

Whats the matter with you? Li Pi asked.

Wei San touched the head she had just hit and felt her stomach: Im a little hungry.

Today was the first practice class. From the morning to the evening, everyone watched the trial practice with interest. They even couldnt bear to go to the toilet, let alone eat.

Li Pi:

He took a deep breath and turned to look at the other students: Everyone go eat, for those of you who want to come to see the operation of Wei San after eating can come.

With that, Li Pi pulled Wei San out.

Bringing Wei San into a restaurant, Li Pi ordered a table full of dishes.

Teacher, its convenient and cheaper to buy nutrient solution. Wei San said reluctantly. Besides, the price of this table was enough for Shiniang to cook several meals.

You speak so much nonsense. Li Pi's heart beat back and forth. He looked at Wei San and spoke seriously, Have a full meal and try again later.

Oh.

After a large table of dishes came up, Li Pi basically didn't move. He just said, You eat, if you can eat it all, then finish it.

Wei San didn't think too much. She ate heartily. After sweeping away the food on the table, she belched with satisfaction.

Li Pi and Wei San returned to the training ground. All the students had already arrived. They all wanted to see how Wei San would manipulate the mecha again.

After eating a full meal, Wei San didn't feel dizzy and her eyes weren't blurry anymore. She entered the mecha cockpit again and controlled the mecha to get up.

Woah

The students present all shouted in unison.

This was no longer the problem of controlling the movement of the mecha, but just now the mecha got up, first supported his arms on the ground as a fulcrum, then knelt down on the ground and slowly got up. What was needed to create this series of actions was balance.

This was talent, this was the difference between high and low perception.

Wei San was definitely grade A !

Li Pi looked at the moving mecha with a complicated complexion.

Ten minutes later, Wei San came out of it.

The students immediately gathered around her, congratulating her and asking for skills. Wei San answered several times and was stopped by Li Pi.

Chapter 25

Today was the first practice, so everyone had a chance, but next week the students in the class would have practice classes in batches, so that everyone's operation time can be extended. Alright, go home first.

After the students dispersed, Li Pi patted Wei San who was waiting on the side: Lets go.

After going back to wash, Wei San was ready to go to bed. Li Pi stopped her. He stopped talking and looked at Wei San.

Teacher?

Wei San, I think you may be able to achieve results in the big five military academies in the future. Li Pi's eyes were a little complicated when he said this.

He had always expected that Wei San could enter the big five military academies, but that's all. The big five military academies were beyond the reach of any ordinary person. It was a great honor to attend them, let alone how many capable people there are.

Of course, Wei San very naturally said, Teacher, don't worry. If I enter the big five military academies, I will definitely get good grades.

As a researcher, the biggest characteristic of Wei San was that she would make unswerving efforts while being serious.

Li Pi laughed because he underestimated the confidence of Wei San.

Teacher, I was lucky to have seen a student competition of the big five military academies at a close distance. Those people Li Pi shook his head. The phrase the favored son of heaven was tailor-made for them.

Wei San curled her lips: I am also a favored son of heaven. However she was born from the heavens and raised by the earth, an arrogant fool who picks up garbage.

Li Pi: Alright, you're amazing. Go to bed early.

When Wei San closed the door to rest, Li Pi went back to the bedroom and whispered with his wife.

Cook more food in the future. I suspect that Wei San hasn't been eating very full.

Xiao Wei has not eaten full? Shiniang sat up from bed, Whats going on?

Li Pi sighed: I think her body hasnt kept up with nutrition. Todays mecha practice, she fainted as soon as she went up. She couldnt move until they were full.

The first brain intervention into the mecha controller would consume a lot of mental perception, so there was basically no possibility of controlling the mecha beyond this level, because once the person goes in, they would faint like Wei San today, and seriously hurt their mind.

Thats why Li Pi saw that Wei San had fallen to the ground and suddenly his face became ugly. He thought Wei Sans perception was too low.

Now it seems that it was obviously the lack of physical energy supply.

Shiniang spoke heartbreakingly, No wonder Xiao Wei is so thin. She doesnt even tell me.

She usually eats a lot. You and I just didnt expect it.

Chapter 26

Wei San didnt know what they were talking about, but from the next day, the amount of each meal obviously increased. Shiniang often stuffed things for her to eat with her. In addition, Tai Wude would offer food every so often. No, it was asking her to help eliminate sin.

So in the year of graduation, Wei San passed the time with relish. The frequency of dizziness began to decrease. She grew some meat on her body. At last, she looked like a normal teenager and was not so thin.

How did you do that yesterday? Tai Wude pushed a box of cakes over to please and look at Wei San.

He asked about yesterdays operation of the satellite to control the mecha to cut a flower on A4 paper.

The grade B mecha of 3212 Institute was very general and the model was old. Because of poverty, the school couldnt afford the energy to let students practice attack moves. Moreover, most students cant even control the mecha well.

Tai Wude originally had a mecha. Although it was only an ornamental mecha, with experience and grade A perception, the running and jumping movements of the mecha could be completed very well.

Not long ago, he also controlled the mecha to dance. The joint rhythm surprised even the teacher. No teacher in the school could finesse the mecha to that level. After all, there was no A grade perception teacher in 3212 Insitute.

But to have the control to cut flowers on A4 paper, Tai Wude couldnt do it. The mecha hand was too big and the paper was too thin.

Just do it like that. Wei San took a bite of the cake. Control your fingers and keep your balance.

Tai Wude heard this and took out another box of food from behind and placed it in front of Wei San.

Wei San opened it, took a look and closed the box with satisfaction: Alright, Ill teach you next class.

They only had the last semester left. All the top students in each class were selected and reorganized into a practical class. They individually used the single mecha.

Wei San was now in the same class as Tai Wude.

There are still a few months to test your perception. Are you nervous? Tai Wude asked Wei San.

A little. Wei San only had a general understanding of this matter.

Tai Wude thought for a moment and said seriously, You are stronger than me. You could control the combat mecha so quickly, so you must be grade A.

Probably.

The next day, after entering the mecha cockpit, Wei San turned on the light brain and recorded the video, so that Tai Wude could see her actions clearly. The control board was complex, and the various key combinations needed to be explored by herself. She knew the operation of the mecha better than others, so she would learn things faster.

Do you see clearly? Wei San asked when he came down.

I see. Tai Wude didnt hurry up. Instead, he pulled on Wei Sans arm. We should practice mecha confrontation.

Wei San glanced at his hand and said, Confrontation means at least two mecha. We only have one mecha to train in turn.

Tai Wude nodded: I know. Could you change my familys mecha so we could bring it to school to train against?

Wei San tutted, Do you think so highly of me?

Tai Wude hardened his heart, As long as you can do it, I will promise you any conditions.

Tai Wudes uncle lived on the big star. He often showed off his children when communicating with his father, such as what training the school had today. He was annoyed before. Later, he thought it would be good to get some news from his uncle.

His family was rich on Star 3212, but that was only on Star 3212. He couldnt even go to a big star to attend school. To go to school on a slightly larger planet, you have to pay a lot of money before you can settle down. There were a series of huge expenses behind. Tai Wude could only stay on Star 3212.

Now facing graduation, Tai Wude was bound to go to the big five military academies, but the courses that many of the big stars have studied were not studied by him before. His parents were very anxious.

If you want a complete transformation, I need to dismantle the mecha. Wei San pointed to the mecha in front of her with her chin.

Dismantle, dismantle the mecha? Tai Wude stammered and asked, he clearly wanted Wei San to transform into such a mecha, but now she actually said she wanted to dismantle this mecha? !

I'll put it back after dismantling it to ensure that the mecha will not be damaged.

As a former top engineer, it was a basic professional quality to install the disassembled things intact.

Tai Wude stared at the mecha in front and struggled for a long time. Finally, he gritted his teeth and said, I'll have a try and attempt to get the school's consent.

Chapter 27

It was easier than Tai Wude thought.

At the beginning, when the school heard that they wanted to borrow the mecha for students to dismantle, naturally, they refused, saying that it was impossible. The school only had this one mecha, how could it be willing to let them borrow it?

Later, Tai Wude asked his father to go to school and said he would donate the mecha at home, but it was an ornamental mecha, so he wanted to dismantle the mecha in the school to learn, and then transform it into the same combat mecha.

The school hesitated.

If the transformation was successful, then there would be one more mecha in 3212 Institute. However, if the transformation was not successful, even the one mecha left in the school would be broken, and the gain was not worth the loss.

After hesitation, the school put forward another plan and agreed to lend a mecha, but the one who dismantled and transformed the mecha should be replaced by school teachers.

Tai Wude disagreed: Which teacher in the school could transform the ornamental mecha into a combat mecha?

He just said to take the mecha back and let the mecha engineer invited by his family transform it. He didnt say that this person was Wei San.

Finally, the school compromised and agreed to hand it over to Tai Wude, but the school would send teachers as assistants.

The school director was really a chicken thief. First, the teacher can help in case of problems. Second, if the mecha engineer of the Tai family really had this ability, the teacher may learn something nearby.

Tai Wude rushed to contact Wei San on the light brain and said he had got the schools mecha. Together, they decided to do their homework every night.

On the night when the mecha arrived at the Tai house, Wei San tore down the school mecha, and the two teachers who came next to her as assistants bugged out when they saw Wei San.

Looking at the skillful dismantling action of Wei San, a teacher hesitated and asked, Arent you a student of Class B?

Wei San nodded and said yes, yet her hands movements were not slow at all. She carefully took out several main parts. As expected, it was much more complex than the ornamental mecha. It could even be said that it was two completely different systems.

Originally she thought it would be transformed soon, but now it seemed that it would take at least a month to do it well.

Its hard to buy the engine of a combat mecha on the market. Its also a sky high price. Its basically impossible to transform it. Another teacher watched Wei San take out those parts and spoke.

Wei San just picked up the engine and went to the table next to her. Hearing the speech, he replied, No buying, Ill see if I can make it.

The two teachers looked at each other, and their faces were full of disappointment and ridicule.

Originally, they saw that the student was skilled and might really know something. Now when they heard this, it was obvious that she didn't understand the mecha at all. Was the engine so easy to create?

Wei San didn't know and didn't care what the two teachers were thinking. She disassembled the school mecha overnight. She didn't let go of anything she could. The mecha several meters high became piles of parts.

I'll give you a purchase list. Buy all the things on it. Wei San wrote for an hour, wrote all the parts she wanted on it and handed it to Tai Wude.

Tai Wude reached out and accepted it. Startled, this fucking list was two meters long. Wouldn't he have to buy until his family's fortunes were dissipated.

He looked carefully again, and his heart gave another what the fuck.

Every part on the list, from screws to metal joints, was marked with the purchase address and price.

Chapter 28

Was Wei San a pervert?

Tai Wude picked up the list and looked at the total price on the back. He couldn't help letting out a yi sound. The total price was only 2 million star coins, but there was 10 grams of Youjin in it, which meant that so many parts only needed 1 million star coins.

Of course, more than two million star coins was a lot, especially on Star 3212, but if you could really transform out a combat mecha, the money was just a drizzle.

Let's stop here today first. You can buy all the materials on the list these two days. Wei San pointed to a pile of parts. Don't randomly touch here.

Ok.

After returning, Wei San said her greetings to Li Pi and said that she might not come back at night for the next month.

Li Pi looked at her up and down: Can you really transform the mecha?

The school director doesn't know yet, but he would definitely know that the person who transformed the mecha was Wei San early tomorrow morning.

I disassembled the mecha from the school. Wei San took a sip of the hot soup handed over by Shiniang. It's not bad. It was a little difficult to make the engine, but it should be able to be transformed in a month.

What the school teachers can't do, you're making it out to be as simple as eating. Li Pi disliked her boasting, Go to bed after drinking.

Wei San was noncommittal. This matter was as simple as eating and drinking water to her. However, she really doesn't understand a lot about mecha in this world. For example, when the engine was disassembled just now, for many structures, she doesn't understand the principle. At that time, she could only follow the cat and draw the tiger.

Since then, Wei San had classes during the day and went to Tai Wude's home to transform the mecha at night. Sometimes she stayed up from night till day. Even Tai Wude admired her perseverance.

It was the School Director that suffered the most. After learning that the person who transformed the mecha was a student of Class B, he regretted it so much at that time. He suffered every day for fear that one day he might hear that the mecha couldn't come back and was permanently damaged.

Fortunately, however, Wei San installed the school's mecha first and sent it back completely.

The school immediately asked the teachers of Class A and B to check the machine to see if there was any damage.

The teacher of Class A was still confirming the mecha data. The teacher of Class B went up and tried it out. Everyones expression looked strange.

Feeling

Do you also think this way?

Thats right.

The School Director trembled: Whats the matter? Whats wrong?

One of the teachers said, The operation is better than before.

School Director: ? ? ?

Other Class B teachers nodded together: Its really more flexible.

At this time, the teacher of Class A looked at the data screen collected in his hand: Why has the aggressiveness become so strong?

The school representative swallowed his saliva: What do you mean?

Teacher Li, please go up and try the attack ability of the mecha again. The teacher of Class A shouted.

Li Pi jumped into the mecha cabin, went in and tried again. He punched the steel plate erected in the training ground and suddenly it concave into a pit.

This The teachers were surprised. The steel plate was very special. They had just purchased it a few years ago. The original mecha could not cause so much damage to the steel plate at all, leaving at most shallow traces.

Li Pi tried several times and then came out: Except for flexibility, its not much different from before.

The teacher of Class A discussed it for a long time and didnt get the result. Finally, he called the two assistant teachers to ask what was going on.

Chapter 29

The two teachers rushed over and looked confused: We watched Wei San install the mecha. She didnt do anything to the mecha.

The attack data of this machine armor has become stronger. Look at that steel plate.

The assistant teacher looked at the fist pits and was stunned: All the materials bought by Wei San have been used on another mecha. This mecha didnt have anything added.

Why dont you call Wei San over and ask? The school suggested.

Li Pi refused: Shes in class. Just send a message after school if you need anything.

Finally, the school sent the teacher to send a message to ask. A lot of questions were sent. Wei San replied simply: Nothing has been done. The elbow and arm bones and joints have been slightly changed, but the attack power should not be enhanced by much.

Now the mecha has also returned, and its attack power has been enhanced, the school was completely relieved. It even wanted Wei San to help change the other mechas in the school.

Wei San only said that she would transform the Tai Wude mecha first, and then change the school mecha.

A month later, Tai Wude's mecha was successfully transformed into a combat mecha similar to the school mecha. It took another two days to change the arm joints of the other mecha in the school.

I can't say it's exactly the same. There's still a gap between your machine and the real grade B mechas, but it's fine to practice with. Wei San's interest was waning.

Transformation has been transformed, but there were many principles she doesn't understand.

Just practicing is fine. We're going to test perception in a few months. When we go to the big five military academies, it's said that they would gift mechas. Tai Wude drawled out.

Give out mechas? Wei San heard about it for the first time. Are the big five military academies so rich?

Tai Wude nodded: I heard what my uncle said. As long as I enter the big five military schools, the school would give each student a mecha, especially rich.

Wei San suddenly began to look forward to that day.

The students who could control the running and jumping of mecha in the school have begun to train for mecha confrontation. In fact, it was just two mecha battling, and the mecha of Tai Wude was officially requisitioned.

Regarding fighting, Wei San had come to this world before she had begun to learn. She personally thought that her fighting skills were average.

In fact, among those who saw Wei San fighting in the future, there was no one not afraid.

She didn't want to fight at all. Now she changed to the mecha. Taking into account the general quality of the mecha, she restrained her hands.

Wei San! Fuck you, don't run if you have the ability!!! Tai Wude shouted angrily on the mecha communication channel.

The son of a bitch plays mecha confrontation completely depending on her mood. If she was in a good mood, she would have a close fight. Sometimes when she has a brain freeze, she starts to turn around all over the court, so she won't let her opponent touch. She doesn't pay attention to fighting style at all.

If you have the ability, catch up with me. Wei San replied on the channel, If you lose, buy me skewers.

Chapter 30

The connection between the mecha control and the head requires perception. Tai Wude ran with Wei San for a long time, and his head began to feel faint. He gasped and kept his hand speed: You stop, we'll have a good fight. Whether you win or lose, I'll invite you to eat all over the street!

Wei San tutted, When did you win? Daddy doesn't want to sweat today.

Tai Wude: Shit, bullying others!

At the last training session, Tai Wude didn't catch up with Wei San. On the contrary, when he came out, he almost hit an obstacle on the training ground.

For students with grade A perception, at this time, the teacher could hardly teach anything. As a person who almost went to the military region, Li Pis close-up skills were among the best in 3212 Institute, but now several students have learned almost the same.

In the next two months, several top students in each Class B were in a state of free range.

When the day of testing perception came, many parents waited outside of the school, hoping to hear good news.

Everyone stood in line with the queue at the beginning of the school year. There were ten classes, namely ten teams. Only nine years ago, there were hundreds of people in each team, but now most classes have only dozens of people.

Tai Wude was in Class B1 and stood in the first position. Later, he was the first person to test his perception. However, he was not nervous. After all, he knew the results in advance.

Number B1108001.

When he heard that they were calling his student number, Tai Wude walked in with his head held high and came out after about five minutes. His face was very calm.

Grade A.

After he returned to his position, a voice rang through the whole school.

The students at the bottom immediately exclaimed that although they had known for a long time, they still couldn't help admiring after they were really confirmed that Tai Wude could attend the big five military academies.

Number B1108002.

Grade A.

After the second student entered the test, they were A grade. The whole playground was boiling, and everyone was imagining that they were the next A grade.

However, the following reality made everyone's luck disappear and gradually calm down.

Grade B.

Grade B.

Grade C.

After two consecutive classes, no one was grade A.

Number B3108598.

Grade A.

There was already three. These three people all rank in the top three every year.

Time passed bit by bit. It was class B5s turn. People went in one after another and got grade B perception one by one.

Finally, it was time for the last one in the class.

Number B5108429.

Wei San raised her eyes. Its her turn.

The author has something to say: Woohoo, take off!
