

Star of Space 205

Chapter 205 Enclosed land for planting?

"Ten, aren't the day lilies all cold?"

Can the ice cocoon in her hand last long enough for her to complete ten high-level tasks? What's more, treating illnesses and saving people is not as easy as eating and sleeping. Who knows how long it will take to complete the task?

"Think of a way to see if there are more powerful tasks that can be upgraded quickly. The ice silk cocoon cannot be left outside all the time." She said to the jade mirror in a consultative tone.

Ice silkworms are different from ordinary silkworms. Although ice silkworm cocoons can be kept for a long time and ice butterflies will not break out of the cocoon, she must have a place to put such a big bag, right?

Put it in the room?

Just like Ya Molian said, with such a big bag, she will look like the silkworms frozen into ice lumps, okay!

But where can the others be placed? Yamolian's house? Or the bamboo house in the mountain inside Yamolian? She felt that she really had no other choice except Ya Molian.

'Ice silkworms can be cultivated for medicinal purposes. '

Nine characters were displayed on the jade mirror again.

Lin Caisang: "..."

Suddenly, her eyes lit up. How could she forget that ice silkworms were not ordinary silkworms?

Not only can ice silkworms be used as medicine when ground into ice, but also after being turned into ice butterflies, the butterfly powder and even the entire ice butterfly itself can be used as medicine, and ice silkworm silk can also be used as an excellent medicinal material. of.

Of course, cultivating ice silkworms as medicinal materials requires a lot of effort. First of all, their diet is not ordinary. They have to eat all the medicinal leaves!

Doesn't that mean that the medicinal herbs garden she just planted will be eaten into bald spots?

"Okay, I'll keep it as medicine."

Just eat it. The worst thing is that starting from today, she will go up the mountain every day to dig out more medicinal materials and plant all the medicinal materials that can be planted. Is this enough for these little guys?

But now, the ice silkworms have formed cocoons, and they can't eat them even if they want to.

'I suggest you read the jade book on enclosure planting, it will be very helpful to you.'

Just as she was about to carry the sack to the medicine garden, she saw a line of words displayed on the jade mirror again. She paused and looked at a stack of thick jade books beside her.

"Planting in an enclosed area? That is to say, I can treat these ice silkworms as ordinary silkworms, build a few shelves, and then pick medicinal leaves or medicinal materials from the medicine garden for them to eat every day, without letting them destroy my medicine garden?"

If so, that's great.

She put down the sack, picked up the jade book on the side and read it carefully.

...

In the Golden Pearl Space, Lin Caisang has been reading a jade book, but outside, a father and son came to the courtyard of the Lin family, both of whom were also very shameless.

"Dad, you and your mother are living with Sangsang now, and your life is getting better and better." Liu Baixiao looked at Lin Laogong sitting in a wheelchair in the yard with a flattering look on his face, and spoke with bright eyes.

"Look, Sangsang already has so much mountainous land, and she doesn't need the two acres of land that our family has, right? I've been kicked out by the Liu family now, and I bought that shabby house again, and I really only have one tael of silver. It's all gone. Can you please... give me the title deed to our two acres of land? Anyway, there is so much land in Sangsang, so you and your mother will not have to worry about food and clothing. "

If you want to live in Yacun, you cannot live without land.

But if he was asked to go to the clan leader to ask others to move the land and sell it to him, or to go to Li Zheng to buy land, he would not be willing to spend the money.

It just so happened that Lin Caisang had so much mountainous land, and she had managed it so well. The few acres of land his father had in his hands could just be enough to grow food for him. It was like killing two birds with one stone.
