

The Game 1691

[Chapter 1691 A Suitable Cell! The Same Situation Occurs! 1](#)

Qin Lin quickly brought the ancient saichalong's gene to Lin Lin's laboratory.

As soon as he arrived, the three team leaders in charge ran up to him in a hurry. Academician Qin, the gene fragments have all been detected. They are all fragmented gene fragments. There is no complete gene fragment chain at all.

Qin Lin had expected this. He said, the next step is to get a complete genetic chain to supplement the genes. At this stage, we have to find it in modern animals. Of course, we can't just use frog genes to supplement it.

These words made the animal Genetics experts laugh. Everyone knew what this joke was about.

They were all Animal Genetics experts, so they would watch some movies related to Animal Genetics.

Therefore, many of them had watched the movie 'Jurassic Park' and naturally knew that the genetic chain of the dinosaurs in the movie was supplemented by dinosaur gene fragments and frog gene fragments.

However, genetic chain replenishment required similar genes to replenish the dinosaur gene. In other words, the dinosaur gene needed to be supplemented with at least some dinosaur gene.

Using frogs to supplement the dinosaur gene was a bit of nonsense. They were not of the same species.

In such a situation, it was impossible to create dinosaurs. Instead, it would create freaks.

They had just been discussing how to supplement the dinosaur gene chain and had teased this problem. They didn't expect Academician Qin to also tease them about it.

At this time, Qin Lin took out the experimental box in his hand and ordered, "now, let's split into two groups. One group will be in charge of testing this new gene, while the other group will be in charge of analyzing and looking for animal genes that can supplement the brachyponera gene fragment!"

His words stunned the animal experts, and they all looked at the experimental box in Qin Lin's hand.

One of the group leaders asked subconsciously, "Academician Qin, is the dinosaur gene in this experiment box?"

"En!" Qin Lin nodded with a smile.

"It's not a Brachiosaurus?" Another group leader asked.

"I didn't say there was only one dinosaur gene, right?" Qin Lin explained with a smile, "this contains the genes of the ancient Sacha Dragon. It's from a completely different era from the brachyponera. So, we still have to re-research a suitable living body fluid.

These words shocked the animal experts even more. They asked one after another, "

"Academician Qin, how many dinosaur genes do you have?"

"This is unbelievable. Academician Qin, how did you do it?"

two dinosaur genes. Academician Qin, do you still have more? "

Qin Lin immediately replied, " it's already unbelievable that there are two of them. Of course, it's up to luck whether there will be more in the future. After all, I've been secretly buying dinosaur fossils.

He didn't make any promises. After all, they could still mine in the mine, but who knew if they could dig out new dinosaur bones?

When he dug it out, he would be able to obtain another dinosaur gene.

Then he could start explaining again.

Only then did the experts heave a sigh of relief. They felt that it was reasonable.

Two species of dinosaurs were already shocking enough. If more were to be presented, they would be scared silly.

"Alright, let's split up into groups. Let's not waste any more time," Qin Lin said.

One of the three team leaders immediately went to test the genes of the Dragon.

The production of the living body fluid no longer required so many people. Although the previous plan of academician Qin was targeted at brachiosauruses, the formula and data inside could also be borrowed. Therefore, it was easier to carry out the research of the genetic living body fluid now.

The other two groups naturally began to study and analyze the genes of various animals in order to find a gene that could supplement the dinosaur gene chain.

Moreover, a lot of animal genetic data was available in the Chinese Academy of Sciences and their original laboratory.

These data could be used for comparison. Perhaps there would be a suitable one among them. When the time came, he could directly use this gene as a test.

This was a good idea, but after the experts compared all the genetic data, they found that it didn't pass. None of them were suitable.

Therefore, for the time being, they could only search for other animal genes to test.

With the Chinese Academy, it was easy for them to find some animal genes.

Especially since Minister Lu knew that it was Qin Lin's experiment, he began to arrange whatever genes Linlin's laboratory needed. Then, the animal genes were extracted as soon as possible and sent to Linlin's laboratory.

It was a pity that none of those animal genes were suitable to supplement the dinosaur gene fragment.

Even those rumored to be descendants of dinosaurs with certain dinosaur genes were not allowed.

This proved that those animals did not have dinosaur genes. Therefore, if this news were to spread, the reputation of the experts who had studied these animals and said that they had dinosaur genes would be tarnished.

From another perspective, it also showed how ridiculous the plot of 'Jurassic Park', where dinosaur genes were replaced with frog genes, was.

Now, they really hoped that it would be that simple.

Unfortunately, reality was cruel. It was not as simple as the movies imagined.

After all, most genes would automatically disintegrate under the effect of enzymes after the death of an organism. The carbon atoms in the DNA would also decay automatically, and the DNA would completely degrade in about 6.8 million years.

[Chapter 1692 A Suitable Cell! The Same Situation Occurred! 2](#)

On the other hand, the Brachiosaurus was a creature from 100 million years ago. It was impossible to complete the gene fragments that survived under such circumstances with the genes of a modern creature that was not of the same species.

So, as time passed, the two team leaders had no choice but to look for Qin Lin.

academician Qin, we have to think of another way. We've tried all the genes that should be tried, but there's no way to supplement the brachyponera gene fragment.

if I forcefully replenish it, I'm afraid it'll make the Brachiosaurus gene lose its vitality quickly.

This made Qin Lin frown. That would be a problem.

One of the team leaders said, "perhaps we don't have to use genes of the same race. Perhaps genes of the same generation can be used to supplement it?" After all, we've done similar mutation experiments between the genes of modern animals. Many of them have succeeded and are now being promoted."

"That's a possibility ..." Qin Lin's eyes suddenly lit up. Genes of the same species were hard to find, but genes of the same generation might not be the same. He had an animal that had it.

It was little yang, the Chinese alligator.

He had the bloodline of the ancient Chi.

The kun was a horned Dragon, and it was a terrifying creature with a huge body.

If he could extract the kun gene fragment from little Yang's body, could it be used to supplement the Brachiosaurus 'gene fragment?

After all, they were definitely similar animals of the same generation.

At the thought of this, Qin Lin hurriedly took a large needle syringe from the laboratory and left the laboratory.

All the animal geneticists were looking at him.

Although he didn't know what was going on, academician Qin's appearance should mean that he was thinking of something and was going to do something.

They couldn't help but sigh again. So many of them had been working on it for so long without any conclusions and results, but academician Qin came up with a solution just by chatting?

If that was the case, then this academician Qin was not only a monster, but also a terrifying one.

After Qin Lin left jinglin's lab, he went straight back to jinglin Manor and found little yang, who was hiding in the middle of the playground and gnawing on a dog-tooth.

Yang called out happily when he saw his master and ran over to Qin Lin.

Qin Lin watched as yang took out a large syringe from the lab.

The moment yang saw the needle, he had a bad feeling. He suddenly stopped in his tracks and was stunned, as if he had a bad feeling.

"Little yang, come here!" Qin Lin waved at yang affably.

Yang called out in a hurry and subconsciously took a few steps back.

"Come, bad ..." Qin Lin coaxed.

Yang shook his head and took a few more steps back.

"You're disobedient!" Qin Lin said as he pounced on yang and held him down. "Come over, you!"

A moment later, shrill screams came from the tusk. Yang's legs were tightly clutched by the bones and soil as he kept lying on the ground!

That scene ...

Finally, assistant yang gave up struggling, and all that was left was his whimpering!

Qin Lin was also holding a large syringe full of blood, satisfied.

On the grass, assistant yang looked at Qin Lin pitifully, then ran away without looking back.

It felt that its master was really terrifying today!

Qin Lin held the tube of blood in his hand, feeling very satisfied. He then returned to his laboratory.

When Qin Lin returned to his lab, the animal geneticists all looked at him, especially the tube of blood in his hand.

The animal Genetics experts all stared at the syringe.

They might have guessed something.

Qin Lin handed the tube of Yang's blood to one of the team leaders and said, hurry up and test the genes in this blood. See if the genes in this blood can supplement the Brachiosaurus 'genes.

The team leader immediately nodded and took the blood. Then, he organized people to start testing the blood.

This kind of work was not a big problem for these experts.

With the cooperation of the experts, Yang's blood was soon distributed to each of them for analysis.

It didn't take long for the experts to identify all the gene fragments in Yang's blood.

Someone exclaimed, "

this is unbelievable! The genes in this blood are actually divided into several levels!

that's right. There are both modern-level genes and a certain gene from ancient times. The activity of this gene is very strong!

".."

the activity of this ancient gene seems to be able to be used to replenish the Brachiosaurus gene!

"Hurry up and try it!"

The animal geneticists immediately began to study and compare.

Many people looked at Qin Lin with even more admiration. Other than admiration in their eyes, there was still admiration.

Academician Qin was really amazing.

He was really going to get a feasible gene.

They had studied and tested the genes of so many animals, but it was useless. Academician Qin little just needed to draw a tube of blood.

Time passed.

When they discovered that the gene fragments in the blood could supplement the Brachiosaurus gene, the animal geneticists were completely immersed in the supplementary gene fragments.

Two days passed in the blink of an eye.

Until someone in the laboratory exclaimed, "

unbelievable. It's actually completed.

"Yeah, we have a complete genetic chain now."

"What's next?"

"Find a suitable cell and express the DNA!" One of the team leaders said.

Qin Lin also nodded.

Genes were the manifestation of genetic information on DNA fragments. It was difficult to form a living individual with just genes alone. Only living cells could express the DNA, and this DNA contained the complete brachyoponera's gene chain. Only then could one attempt to research and create dinosaurs.

This team leader was obviously capable.

now, bring some people with you to find the DNA-expressing cell and perform genetic fusion. This is much easier than supplementing the gene fragments," he said to the team leader.

The team leader immediately nodded. academician Qin, leave this kind of thing to me. It's not a difficult problem. It's just a little complicated and will take a lot of time.

"En!" Qin Lin naturally knew about this problem, so he didn't dwell on it. He handed over the task of looking for DNA suitable for cell expression to these experts.

In the known Animal Genetics, there were actually many animal cells that were very mild and neutral. They could be used as cells that carried brachyponera genes and expressed DNA.

When Qin Lin returned to the Linlin Manor, Zhao Moxi and Lin Lanzi were watching the news.

The news was about you city's Food Festival.

"Hubby, you city's Food Festival is starting again. Are you going to make glowing beef again this time?" Zhao moyin asked when he saw him coming back.

"Well, since you've agreed, let's go up and have a meal together!" Qin Lin nodded.

"Then remember to bring some back," Zhao moshu immediately said.

Obviously, she still remembered how delicious her husband's beef was.

Lin Lanzi said, "when the time comes, our Scenic Area will have to cooperate. You should know that the restaurant in Linlin Manor is also a very famous restaurant that combines Chinese and Western food."

"Sister LAN Zi, I'll leave this to you," Zhao mochen said.

You city's Food Festival was about to begin, and it was getting more and more popular on the internet. Under the joint promotion of the three TV stations, it was almost the hottest thing.

Naturally, this attracted the attention of both local and foreign media. The attention was naturally due to the gourmets 'publicity.

Those gourmets were very famous overseas, and many of their companies in the food industry had quite a lot of assets. When they worked together, and with the gimmick of the world's master chef, they naturally attracted attention.

In a secret place in America, Adolphus was also watching the news of the food Festival. While calculating the date, he did not forget to say to the man beside him, ""Sir, you city's Food Festival has given us an opportunity."

it's better to take advantage of the situation. By then, not only will there be tourists from the eastern countries, but there will also be tourists from other countries. It will be easier for our people to enter.

yes. the Mister nodded but asked, " have you cracked the secret message Black Star left behind? "

that's right, " Adolf said with a nod. Black Star and the others have already found out who the scientist behind this is. It's actually a security guard of that Scenic Area.

the people this time are all elites that I've personally selected. They're different from the inferior goods last time. We'll definitely achieve our goal!

"Mm, don't worry!" The Mister was very satisfied with adoxi's attitude, and said, " as for those Department students 'perfunctory behavior, I'll go and warn them.

.

Linlin's laboratory.

The animal geneticists had been looking for suitable cells to express their NDAs and accommodate the brachyponera's gene strands.

As time passed, they found several types of animal cells that could achieve this goal.

However, after these cells were fused with the Brachiosaurus 'genetic cells, their faces turned ugly. This was because the fused cells were all in the same bad condition.

[Chapter 1693 I Must Find More Bones For Boss Qin \(1\)](#)

After the animal geneticists discovered the problem, they also tried to solve it.

However, they discovered an even more thorny problem.

They had no way to solve this problem, as it involved the habits and nature of animals.

These animals 'cells contained a special enzyme that would make animals irritable and fierce.

In other words, it was ferocity and beastly nature.

If the dinosaurs had been ferocious in ancient times, it would not have been a problem.

however, in modern society, if the dinosaur was animalistic, it would hunt after being provoked. It might even hurt people.

This was definitely not a good thing.

However, this beastly nature was an animal's instinct, and they had no way to solve it for the time being.

Therefore, they could only ask Qin Lin for help.

When Qin Lin heard the news, he rushed to Linlin's laboratory as soon as possible to check the cells.

To his surprise, he discovered that the Brachiosaurus gene could still be affected by these special enzymes.

This was unbelievable.

However, people could conclude that brachiosauruses were very gentle and docile more than 100 million years ago because the special enzyme in their cells was very low.

If one were to ask which dinosaur was the most suitable to be kept as a pet, in terms of personality alone, the Brachiosaurus would definitely be the most suitable as long as one had money to feed it.

It was precisely because of this that the bestiality of these cells would affect the Brachiosaurus. After all, even frogs had hunting habits.

Therefore, these cells were not suitable for the Brachiosaurus.

"Are there no suitable cells?" Qin Lin asked.

An expert suddenly said, "academician Qin, I've tested some data about the blood you brought. The cells seem to be very mild. It seems that we can give it a try, but we didn't try it out at that time. Now, the blood has been used up.

"Yes, I know." Qin Lin nodded and immediately left Linlin's laboratory with a large syringe in his hand.

His destination was Linlin Manor again.

As soon as he arrived at Linlin Manor, he had been looking for Xiao Yang's location. In the end, he found Xiao Yang being ridden around by his son, little Qin Feng.

"Little yang, come here!" Qin Lin shouted at yang, the dumb crocodile.

When yang heard His Master's Voice, he immediately ran over. Then, he stopped in shock, because he saw the large syringe in his master's hand.

This scared it so much that it retreated.

son! Qin Lin immediately shouted at Qin Feng, "hold Xiao Yang down! Don't move him!

"Dad, why?" Qin Feng asked, puzzled.

"If you don't, I'll find you a tutor." Qin Lin said directly.

"Don't. Don't, I'll press ..." Little Qin Feng immediately hugged little yang and shouted, ""Yang, don't move. I don't want to study ..."

Assistant yang was dumbfounded. He didn't dare to move as he watched his big master approach, afraid that his little master would fall.

It felt like it had been locked down and couldn't do anything. It was so pitiful.

A moment later, little Yang's whimpering sound could be heard again.

Not long after, Qin Lin left with a tube of blood, satisfied, leaving behind assistant yang, who looked very wronged.

Qin Lin also took Yang's blood to Linlin's lab immediately and handed it over to the experts.

Those genetic experts hurriedly entered the laboratory again and began their research.

However, Qin Lin was very confident that the brachyponera's gentle nature, coupled with little Yang's habit, would definitely be extremely gentle.

With Yang's blood, the animal geneticists started their research as quickly as possible.

This time, they extracted little Yang's cells and began to integrate the brachyponera's genes into little Yang's cells to create a complete new cell.

During this process, the three team leaders had conducted many experiments. Finally, after one experiment, they obtained a complete cell.

perfect fusion of genes into cells! A genetic expert said excitedly.

"Quick, check it!" One of the team leaders immediately said.

In an instant, the entire laboratory started to move again. They started to test the complete cells again.

Furthermore, the three groups took turns to test, and the final result was: These cells were simply perfect. There was no need to worry about the brachyponera's beastly nature in the future.

in simple words, based on the data from the cell test, as long as one's family could afford it, one could keep the brachiopod as a pet. It would not harm people, and it did not have hunting habits or animal instincts.

Naturally, this was not to say that it was absolutely complete. Even a rabbit would bite when provoked.

If the brachiosauruses felt that their lives were in danger, even if they didn't attack the person, they would still be in a terrible state if they ran into the person.

However, this result was undoubtedly perfect, and it was also what they wanted.

Hence, all the genetic experts were excited.

haha, we're amazing! We really created such cells!

"It's not that we're amazing, it's that academician Qin is too amazing. If it wasn't for him, how could there be such results?"

"Yeah, academician Qin junior has created history again!"

".."

These animal geneticists couldn't contain their excitement.

One had to know that in the research of animal genes and cell reconstruction, once complete cells were obtained, the next research would be simple. It was nothing more than in-body regeneration.

In fact, it was very easy for an animal like a dinosaur to regenerate its body. This was because dinosaurs were oviparous, just like chickens and ducks, they hatched from their eggshells.

[Chapter 1694 I Must Find More Bones For Boss Qin \(2\)](#)

Moreover, in nature, the eggs of many egg-type creatures were very similar in terms of internal composition. Moreover, their structures were similar. Embryo, amniotic sac, egg yolk.

Therefore, he could totally give birth to a child in a borrowed womb.

It could catch some eggs and carry out cell transplantation. The simple thing was to put the egg yolks of many eggs together, then put the egg whites together, find a bigger shell, and transplant the cell embryo into it. A dinosaur egg was assembled.

Next, he just had to wait for it to hatch on its own.

It sounded very simple, but it was a crude description. If it was described by a Science Professional, it would take at least 70000 to 80000 words to describe it.

However, one thing was for sure. This step was very simple for these animal geneticists.

Therefore, when they got the perfect cells, one of the three team leaders called Qin Lin and reported to him. Naturally, someone called Minister Lu.

This good news had to be reported to the leader. After all, the leader had been very concerned about the research progress of academician Qin.

Qin Lin wasn't too surprised when he received the call. It was within his expectations.

With the animal genetic knowledge he had obtained from the mysterious stone tablet, his attainments in this area were very high. He knew that his guess was correct. The only thing he could do was wait for these experts to put it into practice.

And the facts proved that the results of these experts' practice were exactly as he thought.

In the capital, Minister Lu stood up from his office chair when he received the report. He said in disbelief, "'Are you serious? boss Qin has already led you guys to get the Brachiosaurus 'cells out perfectly? Next, we can cultivate brachiosauruses?'"

Minister Lu was stunned by the news.

At first, he was also curious about what kind of research boss Qin was going to do.

When he found out that they were researching dinosaur genes, he was already in disbelief.

Who knew that in such a short time, he had already obtained the dinosaur cells and was about to breed brachiosauruses?

This speed was simply too fast.

Was there really no research that could stump boss Qin?

The Secretary next to him opened his mouth in surprise when he heard what his boss said.

Did Minister Lu just say that boss Qin wanted to breed dinosaurs?

That was a dinosaur.

This wasn't a sci-fi movie. Could someone really create dinosaurs?

But if it's that academician Qin, it seems possible.

Obviously, academician Qin's evilness had already been recognized by the entire Chinese hospital. Even a management Secretary would subconsciously do this.

Minister Lu didn't dare to hesitate. He immediately said to his Secretary, ""Hurry up and book me a ticket to you city."

"Alright, leader." Secretary.

Although the people of you city didn't know what had happened in Linlin's laboratory, they were all excited because the food Festival was about to start in three days.

As the host of you city, many people naturally wanted to make a good fortune at the food Festival, especially those in the food industry. If they were lucky, it was not impossible to make a car at the food Festival.

You city became more and more lively.

Many culinary experts had also arrived in you city to register and prepare to participate in the cooking competition of the food Festival.

Naturally, there were gourmets who had been invited to you city.

These people were all here for the master chef, Qin Lin.

After knowing that the God of cooking was willing to make that kind of glowing beef at the food Festival, they all rushed over.

Some of them had eaten that kind of beef before, and it was still fresh in their minds. Some of them had not eaten that kind of beef before, but they often heard those who had eaten it talk about it.

They were all friends and knew that their friends would not speak nonsense. They would not boast about an Eastern person. Therefore, they knew that this Eastern country's master chef must be really good at cooking.

Therefore, they were here on a pilgrimage.

Because of the publicity from the Western media, many foreign tourists naturally came to you city.

There was no shortage of people who liked to join in the fun all over the world.

Naturally, there were some people among these people.

These people all had ulterior motives.

I've already entered you city. I'm waiting for further arrangements! A foreign tourist stayed in a small hotel after entering you city.

At the same time, similar situations were happening in many places. These people also received a notification, which was to wait for the food Festival to start and then receive information about the target.

At the same time, in the security room of the Linlin Scenic Area, MA Hong was frowning as he read the message in his hand.

Are these people going to stop?

Again.

More importantly, there were quite a few people who came in this time.

However, these people's abilities were too weak, right?

MA Hong couldn't help but frown. It was Chairman Qin's idea to fish those people out last time. Otherwise, those people would have been very strong.

They couldn't find them at first.

Who knew that the people who came this time would be so easily discovered by them? they were simply not on the same level.

Could it be that they were sent by other forces and not that country?

MA Hong was dumbfounded. Normally, if the first attempt failed, they would send someone more powerful, and not someone worse.

MA Hong could not figure it out, but he did not want to think about it. He just had to send someone to keep an eye on them. He wanted to see who these people were targeting. Perhaps it was that unlucky Chen dabeì.

He didn't understand. He was just a Security Manager. He didn't have any abilities. Why did he have to attack this guy?

Linlin's laboratory.

..

Minister Lu soon arrived again.

When he entered the laboratory, he saw a few big eggs that had been prepared. Those eggs were much bigger than ostrich eggs, and he didn't know what kind of animal they were.

Now, the egg had been placed in a special thermal container to hatch, and all that was left was to wait for the dinosaur to hatch.

Minister Lu couldn't help but ask one of the lab leaders, " can a Brachiosaurus really be hatched like this? "

The team leader replied, " yeah, there shouldn't be a problem. If there's a problem, it's not academician Qin's problem. It's what we did wrong in our experiment.

Minister Lu nodded his head and said with certainty, ""Yeah, it's definitely not boss Qin's fault."

"..The team leader was at a loss for words.

Although what Minister Lu said was the truth, could he not be so direct? they were very embarrassed.

At this time, the other two team leaders also came over and reported, "

Minister Lu, the other dinosaur gene has been extracted!

that's right. If we can perfectly replicate the gene fragments of this saichalong, we can research two types of dinosaurs.

Minister Lu heard this and asked subconsciously, "what are you talking about?" There's another dinosaur gene?"

He really didn't know about this. He had always thought that boss Qin's experiment was only on brachyponera genes. Who knew that he would hear such a pleasant surprise?

Minister Lu was surprised, "boss Qin, where did you get the dinosaur gene?" There's actually a second one."

One of the team leaders immediately said, " Minister Lu, it was academician Qin junior who spent a lot of money to buy some dinosaur fossils. Then, he tried to extract the genes. He was lucky and there were always some bones that contained the genes. However, the probability of this was very low. Academician Qin junior spent tens of billions to maintain it!

"Tens of billions ..." Even Minister Lu was shocked by the number.

Then, a thought appeared in his mind. If he had enough dinosaur bones, would he be able to extract even more genes?

Don't count on the Chinese Academy, but find some dinosaur bones and send them to boss Qin.

If they could really create a dinosaur community, it would not only have a great impact on modern society, but it might also be used in planet transformation.

The planet's transformation would definitely require the migration of life. If there was a dinosaur community, that would be the most suitable.

At the thought of this, Minister Lu couldn't help but take out his phone and make a call.

He had to immediately arrange for someone to deal with this matter.

To an individual, it was difficult to find dinosaur bones. However, to the higher-ups, there were too many resources and power at their disposal, so it was not a difficult task.

[Chapter 1695 785-Almost Fooled](#)

Linlin Manor.

Qin Lin looked at the excited Minister Lu and then at the things in the transparent boxes beside him. They were pieces of bone fossils.

Why did Minister Lu suddenly give him these bone fossils?

What the hell did he want these things for? These things couldn't be used to extract dinosaur genes.

boss Qin, I know how you got the dinosaur genes, " Minister Lu said to Qin Feng immediately. I've also found many dinosaur fossils for you. I hope you can extract new genes with your ability.

When he had heard that boss Qin had spent tens of billions to purchase the fossil, he had wanted to ask why boss Qin had not asked him for help.

He could find so many bone fossils with just a little effort.

As for where boss Qin had spent the ten billion Yuan, he did not care. Firstly, boss Qin had so much money. Secondly, boss Qin had many ways to buy things.

They could pay by themselves, by the companies in the Linlin Department, by the Linlin laboratory, or by the scenic Area.

Instead of spending time to investigate this, he might as well find a few more dinosaur fossils.

If she investigated boss Qin, she would be hated by him.

He would not do such an annoying thing.

Qin Lin looked at the dinosaur skeletons and seemed to know what Minister Lu was thinking.

There was an advantage to this. It would be a good excuse if he were to dig up things like Brachiosaurus 'skeleton in the game in the future.

After all, this was the skeleton that Minister Lu had found, and he had extracted the gene from it. So, he could ask Minister Lu if he had any doubts.

Minister Lu suggested, " boss Qin, I hope you can research more dinosaurs. The planet has already begun to change its gravity. In the near future, we will definitely have to move some living creatures there. By then, animals will be the main force.

this dinosaur should be a pretty good choice. Once there are enough of them, we can experiment on whether dinosaur meat is edible or not. We can also instruct the people on what kind of meat to choose.

Qin Lin didn't expect Minister Lu to have thought so far ahead.

However, this was also good. Minister Lu would be the scapegoat anyway.

When the time came, he would just say Minister Lu's bold words. He wanted the people to have more meat, so he found a lot of dinosaur bones and let him extract the genes.

At the thought of this, Qin Lin looked at Minister Lu with a smile.

Minister Lu looked at Qin Lin in confusion.

He felt that there was something wrong with boss Qin's gaze.

After that, Qin Lin also took all the dinosaur skeletons and fossils into the workshop in the inner area of the manor.

He also used the Jade of truth to check the remarks of the fossilized bones. Almost every bone had turned into a fossil.

Therefore, there was no possibility of gene extraction.

In other words, these fossils had no use other than for display.

Minister Lu also received a call from a leader. When the leader called, he asked, "Xiao Lu, what's wrong with you? a few animal fossil museums have called, saying that you've abused your authority and taken away dinosaur fossils from them.

"I know that you people from the Chinese Academy of Sciences have some special privileges sometimes for the sake of research, but we have to unite and follow the procedures. We can't act recklessly and let others say that we're wrong!"

When Minister Lu heard that the leader was here for this matter, he immediately explained, "leader, these dinosaur fossils are for boss Qin. He has already extracted two types of dinosaur genes from some of them. Moreover, he should be able to breed dinosaurs soon.

"Breed dinosaurs?" The leader's voice on the other side obviously became a lot louder. After a moment, he said, the people at the museum are also complaining all the time. Do they have any sense of unity? they already said that in scientific research, as long as there is a need, anyone should cooperate with the research. These people still came to complain. They must have a problem with their thinking.

Minister Lu was a little stunned when he heard this. He had only mentioned boss Qin's name, and the effect seemed to be surprisingly good.

Clearly, the higher-ups were still very reasonable.

Qin Lin left the dinosaur fossils in the workshop. They were only useful now for when he dug up the bones and extracted the genes.

After that, Qin Lin also left the inner area again. When he was outside, he saw Zhao moyin watching the live broadcast of the food Festival in the hall.

Zhao Moyu was also in the hall. When he saw him, he said, "hubby, the food Festival is really lively. Many people came this year, and the food night is in two days. You're going to make beef. Have you prepared the ingredients? "

"I'm ready," Qin Lin nodded.

Actually, the ingredients were no different from the ones he had prepared for Master Lin. The only reason he could make glowing +4 quality food was because of the food Festival. After all, that skill could only be used at the food Festival.

You city's Food Festival this year was indeed lively. There were Five Rings that were banned, and the entire road was filled with food. There were mountains and seas of people, shoulder to shoulder, and it was impossible to walk.

Fortunately, you city's airport was completed, and the train station was finally free of traffic. The bad thing was that you city was stuck in traffic again.

Moreover, there were three TV stations broadcasting live this year, so the traffic jam in you city and the scene of ants moving house were all broadcasted live on TV.

[Chapter 1696 785-Almost Fooled](#)

The whole country would probably be afraid of that terrible scene.

But the entire country was envious. To be able to block Chen, how many people had gone? It was all about the development of the economy and fame.

This was the effect of a Festival on a city.

Unfortunately, they had no way of coming up with such a Festival. They didn't have a Scenic Area like Linlin Scenic Area that had the free and terrifying appeal.

Many leaders were thinking, if they had found the Linlin Scenic Area before it was fully developed and brought it to their city, what would have happened?

This was just like what many people were thinking. If they signed a certain celebrity before he became rich, or if they replaced him in a movie, what would happen?

Or, what would happen if he snatched the other party's opportunity to make a fortune before they did?

Not only would ordinary people think about this problem, but leaders would also think about it. This was human nature.

However, one thing was for sure. Similarly, if it was done by another person, the result would be different.

The Linlin Scenic Area would change to a new city and a new person-in-charge. They would not be as patient, enthusiastic, or ostentatious as Chen Li ...

As long as the person-in-charge changed to someone with a higher profile, or someone who took himself too seriously, Qin Lin might just leave and not serve him.

Why can't I stay when I have a hack? Where could he not develop?

Therefore, there was no point in being envious. The same thing done by different people could sometimes lead to different results.

However, one thing was for sure, and that was if one person succeeded, he would become the object of everyone's envy.

You Cheng had succeeded.

Qin Lin also succeeded.

Therefore, the food Festival was also a success, attracting countless internet celebrities and celebrities, making you city's Food Festival extremely popular.

It was a pity that the food Festival was too short, or for many people, the food Festival passed too quickly.

They had taken a long time off to come here, but time seemed to pass so quickly.

The night of delicious food soon arrived.

Chen dabei had been waiting for Qin Lin since dark. When he saw Qin Lin, he immediately went up to him and said, "boss, Chen Xian is asking when you can go there again. I'll Take You There!"

Since his boss was going to be a chef, the company naturally had to send someone to be the driver.

As the security Manager, he naturally did not want to pass the responsibility on.

"Let's go!" Qin Lin nodded and said something to Chen dabei before walking towards the parking lot.

Before he got into the car, he suddenly received a call from MA Hong, "Chairman Qin, are we leaving now?"

"Captain MA, is there something wrong with the food Festival?" Qin Lin asked with a frown.

With MA Hong's phone ringing at this time, Qin Lin knew what was going on.

It's from Chairman Qin, "MA Hong said immediately. Another group of people came to the food Festival. If I'm not wrong, the target should be Chen dabei.

"Eh!" Qin Lin looked at Chen dabei in shock. Was he here for this guy again?

He guessed that Chen dabei might have been targeted for some reason.

But this guy was too unlucky.

He immediately understood the meaning behind MA Hong's call.

Captain MA, "Qin Lin said, "you can make the arrangements. It's best if we can find out why they keep picking on Chen dabei.

"Alright!" MA Hong answered.

Chen dabei also got into the car and asked curiously, "Boss, who's going against me? I didn't offend anyone, did I? Someone must be jealous of my good relationship with the boss."

"It's fine, let's go!" Qin Lin said with a smile.

It was better not to let Chen dabei say such things, lest he be frightened and reveal some flaws.

Chen dabei had already started the car, but he did not forget to say, "Boss, I know I don't have much ability, but I'm absolutely serious about my work, and I'm not scheming against anyone ..."

When he heard that someone was targeting him, he was in a hurry to express it. He now understood what it meant that the workplace was a battlefield. He didn't offend anyone in the past two days, so why was he being reported to the boss?

Chen dabei drove out of Linlin Manor and headed to you city.

Even though it was the night of food, the end of the food Festival, and only a few lucky people could participate in the night of food, the streets of you city were still very congested.

Fortunately, they had a special passage to the new district's Stadium. Otherwise, they didn't know how long they would be stuck in the traffic.

When they arrived at the stadium, it was even more lively inside. It was filled with the fragrance of various delicacies.

Because this was a gourmet night, those who could come here to show off their cooking skills were the best chefs.

This time, it was different from the first one. There were also foreign Western chefs participating. They treated everyone equally and showed the beauty of food culture.

These chefs could make the most delicious food.

The tourists who participated in the food Festival and entered the food night were naturally the lucky ones. They could taste the most delicious food here.

Naturally, they also had a mission, which was to vote for these chefs and help the chefs they thought were good at cooking become the Champions.

This year's champion would not receive the title of God of cooking. Everyone knew that there was only one God of cooking. That glowing beef, that delicious taste, it was unparalleled.

Therefore, even the first place could only win the title of the champion of the second International food festival's food night in you city. Moreover, they would also be issued a certificate.

Don't look down on this certificate. It's more useful than a star chef's certificate, because it will be signed by the gourmets who participated in the festival.

Many of these gourmets were very famous and well-known internationally.

Therefore, you Cheng's certificate for this food night was very impressive.

The outcome of these chefs would be decided very quickly.

Then, he moved it to the certificate.

However, everyone knew that the real core of the food Festival was coming, and that was the cooking skills of the God of cooking.

Everyone in the country knew that he was academician Qin.

The foreign tourists had also investigated and knew that the other party was a young man.

So, when Qin Lin appeared, the stadium suddenly burst into a loud applause. Whether it was domestic or foreign tourists, a person who could be crowned with the title of God would definitely cause a sensation.

The foreign tourists were especially excited. They took out their phones and started taking pictures of Qin Lin. They didn't want to miss out on this master chef's cooking skills. They also wanted to know why the gourmets were so attracted to him.

Qin Lin had already asked Chen dabei to prepare the ingredients and help him. Soon, he began to cook the +4 beef.

Those gourmets had been tasting the food made by those chefs at the special judging panel.

But now, he still ran out and wanted to watch from a close distance.

Qin Lin was very serious when he was cooking, especially when he used his cooking skills. It was very cool, even like movie special effects.

This scene was seen by many people at the scene, as well as countless people who were watching the live broadcast on television.

This scene probably made everyone understand why the God of cooking was called the God of cooking. Some people couldn't even create such a gaudy scene with special effects.

This scene was naturally seen by people with ulterior motives.

In the beautiful country, Adoxi was watching the live broadcast. He saw Qin Lin in the live broadcast. He knew that this young man had been found out to hide his identity. His cooking skills were very good, so it was not strange for him to attend the food Festival.

However, he also saw Chen Dabeai. This made him confused. After all, he was the target. Why would the target be the young man's assistant?

This shouldn't be the case. Could it be that he was wrong and the other party wasn't the target at all?

Adoxi immediately became suspicious.

It wasn't until Qin Lin finished cooking the pot of beef and opened the lid that he saw a burst of light. He saw a pair of eyes impatiently holding a bowl to fill it with beef and then eating it in a hurry that he finally understood the reason.

The target was a glutton, and he was almost cheated.

Perhaps this was the other party's method, another form of protection.

He was really scheming.

Soon, the glowing beef was finished by the gourmets and some lucky tourists.

These people had finally experienced how unbelievably delicious the glowing beef was.

Unfortunately, there was nothing left before he even ate a little.

After the dinner party ended, Chen Dabeai brought Qin Lin back to the manor.

However, as soon as they left the stadium, a car inadvertently followed them.

[Chapter 1697 Breaking Through The Limit? The Texture Of The Meat Is Very Good? 1](#)

Before Chen Dabeai's car could get far, another car followed behind him. Naturally, MA Hong and the others saw this car as well.

MA Hong knew that these people couldn't help but make a move.

Chen Dabeai, however, did not know about this. He still drove to Linlin Manor.

By the time the food Festival ended, it was already late at night. There were very few cars on the street, so when they reached a deserted Street, the car came over and forced Chen dabeis car to stop.

Chen dabeis stopped the car and cursed, ""What the hell? How do you drive?"

However, just as the two of them got out of the car and Chen dabeis was about to argue with them, a few burly men had already gotten out of the car.

The few big men quickly talked to each other.

its him! Hes the scientist behind this!

"Yes, hes the one who impersonated the security guard!"

"Catch him!"

Qin Lin understood these words.

What did that mean?

The scientist behind the security guards?

Chen dabeis?

Hes a scientist?

Qin Lin suddenly understood why Chen dabeis had always been the target of some people.

Chen dabeis had become the scientist behind the scenes ...

What was he then?

It was suddenly a little chaotic, and it seemed a little magical.

Was there something wrong with these people's brains?

Just as he was feeling puzzled, the few burly men had already surrounded him. One of them even threw a punch at Qin Lin.

Qin Lin didnt hesitate. He subconsciously punched back, and his fist hit the other party's head.

The man was stunned. Then, he slowly fell down and fainted.

He had wanted to knock Qin Lin out. After all, he did not need to take a useless person with him. He was just a burden. Who knew ...

This scene shocked the others.

damn it, hes not just a cover-up, hes also a bodyguard!

"Hes very strong!"

"Kill him!"

The others shouted and surrounded Qin Lin.

They now knew why this young man had become the one to cover up.

It was because of the other party's skills. If someone who didn't know the situation found the other party, they would be fooled and suffer a great loss!

The people from the eastern countries were too treacherous.

Qin Lin shrugged his shoulders, but he was a little eager to try. To be honest, after eating two fruits of the tree of strength, his strength was very strong.

However, after learning from MA Hong and the others, he could only practice with them. He had no chance to actually fight.

This was the perfect opportunity.

Therefore, he made the first move. He took two steps forward and quickly threw two punches.

The two punches were thrown out with full force, and shadows almost appeared. Therefore, the two men could not take the two punches and took them with their heads.

Then, the two of them felt a violent impact on their heads and flew back two meters. They hit the ground hard and passed out. The place where they were hit by Qin Lin's punch was swollen.

This made the remaining two people turn pale with fright. They subconsciously took out their weapons and shot at Qin Lin, but they were fine without their weapons, as they still had a chance to fight with Qin Lin.

However, almost at the same time that they took out their weapons, blood suddenly burst out of their heads and they fell to the ground. In the distance, someone had already aimed at them, ready to let them pose any threat to Qin Lin.

This scene made Chen dabeij, an ordinary person, faint.

When had he, an ordinary person, ever seen such a bloody scene?

However, Qin Lin felt nauseated when faced with such a scene. He vomited for a long time before he could catch his breath.

Even if he had a strong physical quality and had taken 2 fruits of the tree of strength, it was still his first time to experience such a thing. Therefore, he had to be stimulated both physically and mentally subconsciously.

MA Hong immediately brought his men to the scene and sent Chen dabeij to the hospital. He then sent Qin Lin back to the manor.

"They're treating Chen dabeij as the scientist behind the scenes! He should be the scientist who developed the Transformers." Qin Lin said to MA Hong with a bitter smile.

"Then what are you, Chairman Qin?" MA Hong was stunned. He now knew why those people were targeting a security guard like Chen dabeij.

But were those people idiots?

Only a fool would do such a thing.

However, the truth had indeed happened. Could he call these people fools?

That was impossible.

It could only be said that this was too sci-fi. Even movies would not dare to act like this.

However, it was necessary to give a warning.

Therefore, a few days later, a piece of news was broadcasted. A group of foreign thieves had been caught red-handed by the Linlin security company.

Moreover, the news even released photos and videos of those people.

This was naturally for some people to see.

As soon as this news came out, it immediately became a hot search and the internet was suddenly lively.

The netizens naturally believed that the news was true. A thief had really appeared in Linlin Scenic Area and had been caught. Only a few people's faces changed when they saw the news and they quickly spread the news.

Not long after, in the United States, ADOS and the man saw the news.

"There's actually such a thing ..." Adoxi sat on the chair in a daze. He naturally recognized those people.

All of a sudden, he felt a deep sense of powerlessness.

This feeling was the same as when he tried to crack or obtain the technology of that Eastern country. He was as powerless as he was unable to crack it.

[Chapter 1698 Breaking Through The Limit? The Texture Of The Meat Is Very Good? 2](#)

Why was it like this?

..

Time passed.

You city's Food Festival had ended, but it had a huge impact on you city.

The first was the customer flow, the second was the economy, and the third was the future.

This year's Food Festival had also allowed the three live broadcast stations to earn enough traffic and advertising fees.

Therefore, as soon as the food Festival ended, the three TV stations signed the contract with you Cheng for the next Food Festival. This was probably the first time a TV station in a County had put so much effort into it.

However, this County would soon become you city.

After all, the inspection team would still be conducting a long-term inspection in you city, which would be next year or the year after that. This change of city was already in place.

At that time, many things in your city would change. The most obvious change would be the rise in house prices, rent, shop rent, and other things.

Linlin Manor.

As soon as Qin Lin walked out of the inner area, he saw MA Hong waiting for him with some other people. Academician Hao and the other two academicians were also waiting curiously.

He could see team leader Chu, who was a gravity researcher, walking in and out of the hall.

Qin Lin naturally knew the reason. After the planetary gravity technology came out, team leader Chu and the other experts developed the extension of the technology, and they were able to build small gravity gyms.

Most people might not understand that the gravity fitness center was actually the kind of Training Center that Bulma had built for Vegeta and the others in the Dragon Ball.

It was different from the initial laboratory experiment.

This gravity fitness center could provide ordinary people with training. So, as long as there was enough gravity, even if you were just walking inside, you could achieve a very high intensity training effect.

Therefore, with this technology, even military training wouldn't need to be too fancy in the future. They could just go straight to the gravity gym, which would be full physical training.

After all, gravity was applied to every part of the body.

Naturally, MA Hong and the others were looking forward to it the most.

After all, MA Hong had taken the time to go back to the capital to take the body-strengthening medicinal liquid.

In other words, his physique was far beyond that of ordinary people. Normal training was no longer very effective for him.

If it was in the past, he would have thought that a human's physical fitness was already very terrifying and should have reached its limit.

However, he knew how terrifying Chairman Qin's physical fitness was.

This wasn't their limit, and they could still break through.

With a stronger power in front of him, he always had a goal and motivation.

Therefore, he had been looking forward to this gravity fitness center.

Team leader Chu came out with his men. This time, he didn't go in but went straight to Qin Lin. "Academician Qin, the gravity fitness center has been completed. Do you want us to find people to experience it or do you want to arrange it?"

Obviously, it had become a habit for him to subconsciously ask academician Qin when it came to experiments.

Qin Lin had already seen MA Hong and the others, who were eager to give it a try, and said, ""Let MA Hong and the others go in and try!"

MA Hong immediately nodded. that's right. We're here. Just let us experience it. There's no need to trouble others.

Team leader Chu nodded and led MA Hong and the others into the gravity fitness center.

This fitness center was made up of two large empty rooms.

As soon as MA Hong and his men entered the fitness center, team leader Chu and his men began to test it out. They started the equipment, and at the same time, one of MA Hong's men was learning how to operate it from team leader Chu.

At the same time, MA Hong and the others also put on their gravity-canceling equipment.

As long as it was overloaded or something happened to the gravity room, this device could be used to avoid being affected by the gravity.

A moment later, MA Hong and the others felt a heavy weight on their bodies, which was slowly increasing.

Outside, team leader Chu, Qin Lin, and the others also saw that the degree in the gravity room began to increase rapidly, 4,5,6,7 ... 23、 24、 25.. 30..

At this point, MA Hong's men couldn't hold on any longer.

Only MA Hong was still persisting.

"Captain MA, can you still hold on?" Team leader Chu immediately asked.

"Continue!" MA Hong said.

Very quickly, he adjusted the degree and continued to increase it:31、 32、 33、 34、 35..

At this moment, MA Hong was gritting his teeth, and his veins were visible on his face. He looked ferocious, and it was obvious that he had endured a great deal of pressure.

When team leader Chu saw the various values, he immediately said, " Captain MA, your attributes have reached their limits. I don't recommend you continue!

MA Hong's eyes widened, and he insisted, ""Continue, I ... He wanted to ... Challenge ... Lower the limit ..."

When team leader Chu heard this, he frowned and immediately instructed a researcher beside him, " contact the hospital and get ready for emergency treatment! "Slowly increase the weight!" He said.

After a while, the number of points in the gravity fitness center began to increase slowly. Soon, it reached 36,37,38 ...

This level of weight was not something that an ordinary person could withstand. None of the soldiers who had come from all over the world could withstand this level of weight.

This also showed that MA Hong was really strong. No wonder he was able to become the captain of the special case Department and was highly regarded by the higher-ups.

However, this was his limit. If this continued, he was afraid that his blood vessels would burst, or he would die from some other condition.

Just as team leader Chu was about to ask them to stop, he suddenly discovered to his surprise that MA Hong's value had started to drop.

[Chapter 1699 Breaking Through The Limit? The Texture Of The Meat Is Very Good? 3](#)

That's right, the physical values for the test had dropped a little. Originally, they were all red, but now they had become light red.

In the gravity fitness center, MA Hong suddenly felt different. He could clearly feel that his entire body had become lighter.

It was a strange feeling, and he seemed to have realized something.

"Increase the gravity!" MA Hong immediately ordered.

Qin Lin was a little surprised to see this. This level of force was already beyond the tolerance of ordinary people, but MA Hong was still able to withstand it and was even increasing the force.

It was a little shocking.

When team leader Chu saw this, he looked at MA Hong's data and said, ""Increase the force!"

The next moment, the force increased again. This time, the force was 45. MA Hong let out a loud cry before falling to the ground.

The equipment on his body was no longer affected by gravity, and he was panting heavily.

Team leader Chu was completely shocked. It should be known that an ordinary person would not be able to withstand four or five layers of force. Even soldiers and strong security guards could only withstand up to ten layers of force.

Even the soldiers who had taken the potion could only reach 30 points.

And now, this Captain MA Hong was able to see a score of 45.

The endurance was almost ten times that of an ordinary person. Although this did not mean that his physique was ten times that of an ordinary person, it was definitely very terrifying.

"Hehehe!" After a short rest, MA Hong suddenly laughed. He stood up and hurried out of the room to report to Qin Lin, " Chairman Qin, you're right. I really haven't reached my body's limit. I can feel it. This time, I've broken through my body's limit a little and my physique has improved.

Qin Lin was shocked to hear this.

He had only been trying to cover up the fact that he had taken the fruit of the tree of power, and had made up a story that he could break through the human body's limits. Now, MA Hong had really broken through the human body's limits.

The gravity technique had such an effect?

Team leader Chu and the others were all shocked and looked at Qin Lin in surprise.

"Academician Qin, you even thought of this?" "Is this your new research?" team leader Chu asked.

"That's right, academician Qin. Is this your new research project?"

"Eh!" Qin Lin was stunned. He hurriedly shook his head. no, I don't plan to do this kind of research.

Damn it, these people were really talking about research.

He didn't have a new mysterious stone book, so how could he study these things?

MA Hong's team members all gathered around him, asking him questions. Their faces were filled with anticipation. It was obvious that they had used the body-enhancing potion and experienced the feeling of power. They were all looking forward to breaking through the limits of the human body.

Academician Hao had already taken out his phone to contact Minister Lu. He knew how important this matter was. If he could really find a way to use this gravity fitness center to help soldiers break through their human limits, what would be the point?

The body-increasing potion and the special combat suit already had the potential to become a super soldier. What if he could become even stronger?

Qin Lin, on the other hand, went straight back to his office, in case he was involved in the matter of breaking through the limits of the human body again.

Back in the office, Qin Lin looked at the game and began to control the game character to go to the mine to mine. There were still many levels that had not been explored.

Qin Lin controlled his game character to go to the lake mine to dig. However, this time, after the first dig, a small anime scene appeared on the game screen.

A bright light appeared under the game character's feet, and then another bone appeared in the game character's hand. At the same time, a notification appeared:

[congratulations, you've found a special piece of the skeleton of a giant Ford Rafal Dragon. This is a special dinosaur fossil. You can extract special dinosaur genes and it is possible to research and experiment on a special Ford Rafal Dragon. This is a dinosaur with excellent meat texture!]

Qin Lin was stunned. He inexplicably thought of the dinosaur fossils sent by Minister Lu.

This could be used.

More importantly, what the hell did he mean by the texture of the meat was very good?

[Chapter 1700 787-Complete With Pig's Genes!](#)

When Qin Lin saw the attributes of the giant Ford Raphael Dragon skeleton, he only wanted to say that it was very cowardly, very cowardly.

Was the pork, mutton, or beef not good?

If he had a choice, he would choose to eat dinosaur meat.

Qin Lin's interest was inexplicably piqued. Who had ever eaten dinosaur meat before?

He immediately controlled his game character to go back to the farm. He could not enter the game while he was in the mine.

When his game character returned to the farm, he entered the game with a thought. After confirming the remarks, he took the fortal dinosaur skeleton out of the game.

He did some research and finally understood why the poor dinosaur's meat was so delicious. It was because it was huge, much larger than the brachyponera.

What can a chubby one think of?

Wasn't that the same as a pig?

With the size of this huge Ford Raphael Dragon, even a pig would lose its job if it was really raised.

Qin Lin brought the fortal dragon's skeleton back to the studio and began to pick up the tools to extract the genes from the skeleton.

As he had already extracted the genes more than once, Qin Lin's extraction this time was very smooth. Soon, he extracted the genes of the giant wuba, Ford Rafal.

Qin Lin put the gene dish into the experiment box and then took it out of the inner area.

Now that the genes had been extracted, he still needed to produce the gene body fluid first. Otherwise, these genes wouldn't be able to survive for long.

He had just left the inner area when he was surprised to see Minister Lu in the hall.

When did this person arrive? Now, every time he came, he would give people a kind of surprise and mystery.

"Boss Qin!" When Minister Lu saw Qin Lin, he hurriedly went up to him and asked, "MA Hong has broken through some of his body's limits, and his Constitution has increased again. Are you sure you're not going to continue your research on the limits of the human body? "

This was also the reason why he had rushed to you city at the first moment.

After all, the topic of the human body's limits had always been carried out internationally.

Everyone said that the black men in the 100-meter race were the limits of the human body.

It was also a fact that no one had been able to break the world record set by the black man before.

However, that wasn't the truth either because they had the body-strengthening medicinal liquid. No one would have thought that there would be such a terrifying formula in Chinese medicine that could increase one's physique.

After all, Chinese medicine had always been something that they had abandoned. They had even almost eliminated Chinese medicine.

If those soldiers who had taken the body-increasing liquid were allowed to participate in the competition, they would be able to break the record in minutes.

In order to keep it a secret, they didn't make it public. They only allowed some athletes who had used the body-increasing liquid to participate in the competition.

But even so, the results of these athletes were still very terrifying. Now, all countries were trying to find out how their athletes trained, but the only thing the athletes knew was that they had taken Chinese medicine.

If the public knew about it, they would only know that it was because of Chinese medicine. If they wanted to investigate, they could do so. That was if they could understand Chinese medicine.

Who would have thought that MA Hong would actually make a breakthrough with the help of the gravity fitness center and the body-strengthening liquid?

Moreover, MA Hong's physique was definitely the best among the human race, right?

This was a controllable breakthrough. If MA Hong gave birth to his children, would they inherit this physique? or could he use this method of breakthrough as a reference?

These were all worth studying.

Therefore, he wanted to know if boss Qin had studied this topic. If boss Qin had, then it would be a sure thing.

Qin Lin shook his head. Minister Lu, I haven't done any practical research on this subject. Besides, I'm really not good at this subject!

"Boss Qin, you can learn it. If you learn it, you'll be good at it," Minister Lu said subconsciously.

"..""Minister Lu, do you think it's that easy?" Qin Lin asked, stunned.

"Isn't it that easy for you, boss Qin?" Minister Lu said seriously.

"I can't learn it." Qin Lin rejected him outright. Did he really think that he was a demon? if he wanted to learn it, he would need the mysterious stone book.

Seeing Qin Lin's firm attitude, Minister Lu also said, ""Then, I'll organize a group of relevant experts in the Chinese hospital to conduct research."

In fact, he had come to you city to confirm this.

When academician Hao called him, he said that boss Qin had no intention of researching in this area.

However, he had to confirm it in person so that he could arrange for people to carry out specialized research.

In fact, he also knew that boss Qin couldn't do every kind of research. Otherwise, even if the other party was a smart demon, there was always a limit to a person's energy.

Now, the research could only be arranged for people from the Chinese Academy of Sciences to carry out.

At this moment, Minister Lu finally saw the experiment box in Qin Lin's hand and the gene dish inside. "Boss Qin, what's in the gene dish?"

Qin Lin immediately made up a story. It's all thanks to Minister Lu. The dinosaur gene was extracted from a piece of dinosaur bone you sent over.

"Really?" Minister Lu was surprised to hear this.

Although he knew that the dinosaur fossils he had sent would definitely allow boss Qin to extract the genes, he was still very confident. However, he had never expected boss Qin to be able to extract it so quickly.

During this period of time, the heads of the museums were still nagging. They even hired some genetic experts to tell the leaders that it was impossible to extract the genes from those dinosaur fossils. If they were to forcefully study them, it would only destroy the historical records.
