

The Game 1811

[Chapter 1811 Awesome Power Technology!](#)

Mr. Lu and the others looked at each other. They didn't know what they were thinking when they saw the news from that beautiful girl.

" Are they starting to have sci-fi products like this? " An old man asked.

Another old man also said, " This thing is simply a weapon for individual combat. That pair of wings can actually block all those bullets. It's unbelievable. "

Obviously, they would be very excited when their own country's technology developed rapidly. However, they would also be very anxious when other countries 'technology also produced such products.

After all, no one wanted their country's technology to be surpassed or caught up by others.

And now, the Falcon flying device was a product that surpassed their country's technology.

Moreover, it was not just a little bit better.

If that was the case, the advantage they had gained from Academician Qin's Batmobile would be negated.

"Leaders, could it be that this Falcon flying device isn't beautiful?" Mr. Lu suddenly asked. Just like they think the Batmobile is theirs!"

These words stunned the leaders.

What did he mean?

The Falcon flying device was not from America.

Then why was he there?

"Academician Qin?" An old man asked tentatively. But how did he appear in the beautiful country? If he wants to go out, we will definitely find him. Could it be that he directly flew out wearing that thing?"

Another old man looked at Mr Lu.

Mr. Lu immediately knew what to do. He immediately picked up his phone and called Qin Lin.

"Boss Qin, did you ask us to give you the materials to make the Falcon flying device?" he asked as soon as the call was connected.

This was obviously a direct test, and it was a very natural test.

Qin Lin was not surprised to receive this call. After all, the news of the Falcon flying device had already exploded. The higher-ups must have known.

Therefore, it was not strange that Mr Lu would call.

He did not deny it. " Yes, " he said directly. " I developed the Falcon Flight Device, but I haven't installed the weapon system yet. "

"Can this Falcon Flight Device fly for a long, long distance?" Mr. Lu asked immediately.

"Yes." Qin Lin answered truthfully.

The energy contained in the semi-cold nuclear fusion power electromagnetism was very terrifying.

"Boss Qin, can your Falcon flight device block satellite scanning?" Mr. Lu asked again.

"With this function, it's very difficult to be discovered." "Mr. Lu, I haven't even told you about these functions. You actually know all of them," Qin Lin said in surprise.

When Mr Lu heard this, he subconsciously looked at the few old men.

Now, they knew why Boss Qin was in the beautiful country. He must have flown there by himself.

That was the only explanation.

Boss Qin couldn't have teleported over in an instant, right?

"I have to go to You City again." Mr Lu said immediately.

The elders nodded immediately. If they didn't go now, when would they wait?

That thing must be brought back immediately.

Mr. Lu asked his secretary to prepare a plane ticket again and flew to You City.

Not long after, Mr Lu appeared in You City and rushed to Qinglin Manor.

Qin Lin had already received Mr. Lu's call and was waiting for him here.

"Boss Qin, where is it?" Mr. Lu asked when he saw Qin Lin.

"Here." Qin Lin asked someone to bring out a box. Inside was the technical information he had printed about the Falcon flying device, as well as various data and information about his production process.

According to this information, the Chinese Academy definitely had a way to make the Falcon Flight Device.

Mr. Lu thanked Qin Lin as usual. He was polite and talked to his parents before he left in a hurry with the Falcon flying device.

The people of the beautiful country really thought that Falcon and Batman belonged to them. Now they were jumping around. They definitely didn't know what was going on with Falcon and Batman, right?

He really wanted to create a team of batmen and a team of falcons to deal a blow to them.

At that time, the people of the beautiful country would definitely be dumbfounded, right?

Moreover, the combination of the Batmobile and the Falcon flying device must be very terrifying, right?

At the thought of this, Mr Lu could not help but start to urge him. When he arrived at the airport, he also took a private plane to Beijing at the fastest speed.

Due to the importance of the Falcon flying device, the higher-ups had already arranged everything for Mr Lu.

When they arrived in the capital, Mr Lu also took them to the Eastern Hospital as soon as possible.

On the Chinese Academy of Sciences 'side, a group of academicians were already waiting to analyze the Falcon flying device.

When Mr Lu arrived, he immediately instructed, ""Everyone, take a look at this information and digest it. Then, we'll start experimenting. Boss Qin can do it alone, and we won't lose to him with so many people."

These academicians smiled when they heard this. They were convinced by Academician Qin.

Now, there was no one in the Chinese Academy who was not convinced by that person.

However, they still replied one after another,

Don't worry, we won't lose to Academician Qin! "

" That's right. There are so many of us. Can't we learn from Academician Qin? "

"Alright, everyone, let's get started!"

The academicians also started to move.

Moreover, it was rare for so many academicians to gather together for a single technology. Naturally, these academicians exclaimed,

" The mechanical bones and flexibility of these wings are incredible. "

[Chapter 1812 Awesome Power Technology! Devil Area?](#)

" Although the hardness of this material is not comparable to the Batmobile's Nord steel, its flexibility and malleability far exceed it. "

" Academician Qin, you're amazing with your flight balance technology..."

"Ah...This ... This ..." An academician's exclamation attracted everyone's attention.

"Academician Chen, what's wrong?" Mr. Lu asked anxiously.

The other party was a dynamics academician, and he was also looking at technical information on power.

Academician Chen said excitedly, " Mr. Lu, the Falcon Flight Device's semi-cold nuclear fusion power is amazing. You won't be able to imagine how powerful it is. "

"How powerful is he? Tell me." Mr Lu hurriedly asked. He didn't know, but he didn't want to keep him in suspense.

Academician Chen hurriedly explained, " Mr. Lu, this semi-cold nuclear fusion power can completely replace all kinds of existing power devices. Even the rocket power devices that Academician Chu and the others are researching might not be as powerful. "

" Moreover, according to my calculations, this Falcon flying device has such a large amount of power and stored energy with just a small amount of battery. If this thing is used on an aircraft carrier, it can completely conquer the devil zone of Bermuda. "

" Devil's Territory of Bermuda. " Mr Lu exclaimed in surprise.

At this moment, even the other academicians looked over.

They naturally knew what Bermuda was.

Also known as the Devil's Triangle and Hell of Death, Bermuda was one of the most dangerous sea areas in the world and one of the top ten forbidden areas in the world. It covered an area of about 3.9 million square kilometers.

The earliest recorded incident was that of Columbus, who mentioned in his notes: The weather was originally fine and the sky was clear. However, God suddenly changed his face. There was a storm, and the sky suddenly turned dark. The navigation equipment on the ship also failed, and a huge wave dozens of meters high swept towards them. Although they were in a sorry state, they managed to escape in the end and save their lives.

Later, in a letter to the king, Colombo said that he had never seen such a terrible storm in his life. It lasted for eight or nine days!

Luckily for him, the crew of his ship was lucky.

Because there were still many unfortunate fleets in Bermuda, and there were even some strange things that happened.

For example, a sailboat, the Lochary, was "floating" aimlessly on the surface of the ocean in the Bermuda Triangle. When people rowed over to take a look, they found that there was no one on board, only a starving canary!

There was also a brig named " Maria Celeste " that was " floating " 100 nautical miles west of the Azores. When people found it, there was no one on board, but the food on board was still good, and the water and coffee were not finished.

And the cargo ship One-Eye (542 feet long, with 309 sailors) had disappeared on its way back through Bermuda.

.

Strange incidents like this happened in the Caribbean Bermuda, so this area was treated as a restricted area by all the fleets.

However, this was only announced to the outside world. Every country was conducting an investigation into the Bermuda. Some countries even tried to conquer it.

Without any public announcement, the aircraft carriers of various countries were unable to safely pass through the devil's zone in Bermuda.

Even the beautiful aircraft carrier was directly damaged inside. There was even a storm there, and even planes could not fly in.

The moment a plane or helicopter arrived, it would be surrounded by dark clouds. The lightning and thunder were terrifying, and even the aircraft's instruments would be affected and damaged.

Therefore, every country wanted to conquer this Devil District. Unfortunately, no country could conquer this place.

The biggest reason was motivation.

The current power was simply not enough to allow the aircraft carrier to have enough power to break free from the whirlpool of water in the demon zone.

What was Academician Chen saying now?

Academician Qin's semi-water-cooled nuclear fusion power could actually solve this problem and allow their aircraft carriers to conquer the Bermuda devil zone?

This wasn't something Academician Qin had specially researched. It was just the technology that provided power to the Falcon flying device. How could it have such a terrifying effect?

"Academician Chen, are you sure this is true?" Mr Lu immediately began to ask.

The matter of the devil zone in Bermuda was not a secret to the various countries, and there was even competition between the various countries.

It was a kind of scientific research competition and military training competition.

Every country wanted to conquer the devil zone in Bermuda.

And there was no doubt that the country that conquered Bermuda devil zone first would definitely be superior to other countries in terms of technology.

This was a good way to increase one's self-confidence and display one's strength to attack the opponent.

Therefore, if they could rely on the power developed by Boss Qin, it would be of great significance for the aircraft carrier to conquer the devil zone in Bermuda.

Actually, Mr Lu believed Academician Chen.

After all, Academician Chen was an expert in this field, but it was precisely because of this that he couldn't help but ask again. This was indeed unbelievable to him.

He originally wanted to analyze and study the Falcon flying device. Who knew that the technology of the Falcon flying device could be used in other places? This was an unexpected surprise.

Therefore, if this matter could be confirmed, he had to report it to his superiors immediately.

Although the Falcon flying device was awesome, compared to the matter in the Bermuda Devil Zone, this technology could be used immediately to show off.

To a certain extent, this was more significant than the Falcon flying device.

" Mr. Lu, how could I say that? It's definitely confirmed. There's no need to make any changes. We just need to follow Academician Qin's technical design. We just need to increase the scale and enhance the power effect. " Academician Chen immediately replied. He sounded very certain.

After Mr. Lu received the confirmation, he immediately went to a meeting hall. There were already a few old people waiting there.

They were the leaders from before.

After knowing that the Falcon flying device had been brought back, they gathered here and waited for news from Mr Lu.

With the Falcon Flight Device, the Batmobile, and the Body-Enhancing Liquid, they could essentially create a superhero army.

They hadn't displayed their power yet, but once they did, it would shock everyone.

Seeing Mr Lu enter, an old man immediately asked, "Xiao Lu, I brought back the Falcon flying device. How is it?"

Mr. Lu immediately said, " Leader, the Falcon flying device is still being analyzed and manufactured. I have something to report to you. Also, I need to write a scientific research application. I need the leaders to sign it. "

"What is it?" The leader who had just spoken asked.

Mr. Lu immediately explained, " It's the power that Boss Qin developed for the Falcon Flight Device. This power can be used on the aircraft carrier to conquer the Bermuda Devil Zone. "

"Conquer the devil zone in Bermuda?"

A few leaders stood up at once. They knew where it was.

It could be said that humans were the rulers of the Earth. Almost every part of the Earth had been conquered, but there were only a few places that humans could not do anything about.

For example, the Devil Zone in Bermuda.

There was no need to talk about planes, helicopters, fighter jets, and the like. They could not enter the storm at all. If they entered, they would not be able to see anything. Their equipment would also go out of control. In the end, without a direction, they would end up with a plane crash and death.

However, their most advanced aircraft carriers were unable to enter that area in the sea. They were also unable to do anything about the Bermuda Devil Zone.

Now, the power technology that Boss Qin had developed for the Falcon could actually have such an effect?

Academician Qin was indeed Academician Qin.

This thought appeared in the heads of the leaders almost at the same time.

Then, one of them immediately ordered, "Xiao Lu, make the arrangements immediately and get this done as soon as possible. When the time comes, we'll show the world how we conquered the Bermuda Devil Zone. "

"Moreover, it is the first country to be conquered. " Mr Lu immediately nodded and added.

[Chapter 1813 How Could It Be So Fast?](#)

After confirming it, Mr Lu hurriedly left again.

Naturally, he had to apply the semi-cold nuclear fusion power to the aircraft carrier first. As for the Falcon flight device, he could deal with it later.

Mr. Lu called Academician Chen over and rushed to the aircraft carrier power research department.

The person in charge of aircraft carrier propulsion research was Academician Zhao. He was also an old academician who had contributed to the construction of aircraft carriers for his entire life and was also a national scientific research hero.

Academician Zhao was surprised to see Academician Chen and Mr. Lu together.

After all, one of them had his own scientific research, while the other was responsible for the entire Chinese Academy.

Why did these two have the time to come to his place together?

Besides, he didn't need Academician Chen's help with his recent research, so he didn't need to trouble Mr. Lu.

"Academician Zhao, take a look at this document." When Mr Lu saw Academician Zhao, he didn't say much and directly handed the document in his hand to Academician Zhao.

Academician Zhao took the documents in confusion.

He could roughly guess why these two were here.

That was probably because the institute had obtained some new technology.

Academician Chen couldn't finish the analysis alone, so he needed his help.

This was normal.

After all, they were not the only ones doing research. There were also various laboratories in the country and countless laboratories internationally.

These laboratories could also obtain technology. If the higher-ups needed it and obtained the technology, they would have to bring it back to the institute for analysis, then research and make their own things, or even improve them.

Some of these technologies were easy to solve, but some were difficult for a single academician to complete. In that case, they would need the help of another academician.

After all, even though they were academicians, they were different in their specialties.

It was very difficult to be proficient in scientific research.

After all, a person's energy was limited.

Not everyone was as monstrous as Academician Qin.

He had lived for so long, but Academician Qin had only just heard of such a case.

However, when he finished reading the information, an incredulous expression appeared on his face. This seemed to be different from what he had expected. The information was actually about nuclear fusion, and the information about the cold nuclear fusion power was actually complete.

" Mr. Lu, this is..." Zhao Leshi asked in disbelief.

Mr. Lu nodded. " You guessed it right. Nuclear power technology is indeed used on aircraft carriers. According to Academician Chen's guess, holding a nuclear power birthday celebration will make our aircraft carriers helpless. It's the devil's zone in Bermuda. "

When Zhao Yuan heard this, she immediately said, " Mr. Lu's fortune is not bad. This technology can indeed achieve this goal. Oh my god, who came up with this technology? It's too perfect. It doesn't seem like it can be found in this era. At least according to the information, it will take another 20 years before the concept and research direction of nuclear power technology can appear. However, this technology is complete now. "

"This is the technology that Academician Qin came up with," said Mr. Lu immediately.

"Oh, that's not normal." Academician Zhao was stunned for a moment, then said as usual.

Everyone in the modern Chinese Academy of Sciences knew about Academician Qin.

Especially in the internal academician group chat, more and more academicians began to talk about Academician Qin's power and his magic.

Some of the academicians who had worked with Academician Qin treated themselves as Academician Qin's students.

Thinking about it, it was amazing that a group of old academicians thought of themselves as young students. But more importantly, Academician Qin was very talented.

Zhao Leshi, arriving immediately. " Mr Lu, this is the complete technology. Let's not waste any more time. Let's quickly study how to transport this thing to the aircraft carrier. "

This was naturally Mr Lu's goal, so he immediately followed Academician Zhao to a meeting.

Academician Zhao immediately called over all the researchers in the department. He made a copy of the information and distributed it to the researchers. He said,"You are only allowed to read these

documents in this meeting room. You are not allowed to take out any piece of paper, not even a single word."

When the researchers heard this, they immediately became serious.

They all worked in the Chinese Academy of Sciences. How could they not know that this situation meant that it was extremely confidential and that they could not reveal any information to the outside world? Otherwise, the consequences would be very serious. Not only would they lose their future, but they might also face some very serious punishments.

Every country was very strict about such matters.

However, the more this was the case, the more excited and curious they looked. After all, they had no intention of bringing this thing out, so they naturally felt very relaxed. The fact that they needed such a rigorous research data meant that they were definitely not simple. Being able to participate in it would also be very beneficial to their qualifications.

Soon, these people began to read the information about the nuclear fusion power. Their faces were also filled with disbelief.

[Chapter 1814 How Could It Be So Fast?\(2\)](#)

Academician Zhao immediately chided, " Don't act like you haven't seen the world. This technology was created by Academician Qin. Now, we're going to put it into practice and use it on the aircraft carrier. "

These words immediately silenced the researchers.

They had naturally heard of Academician Qin.

Naturally, he knew how powerful that person was.

However, they didn't expect that they would be able to come into contact with that person's technology.

Previously, he had only heard about it from his colleagues and researchers. He hadn't interacted with it personally and couldn't understand it too well.

Now that he had personally come into contact with Academician Qin's technology, he knew how amazing he was.

Even in the world, few laboratories dared to say that they could make this thing within 20 years.

However, Academician Qin had already developed the complete technology and handed it over to the Chinese Academy of Sciences.

Now, Mr Lu was even using it for them to analyze and produce.

Under such circumstances, they were extremely enthusiastic.

If they couldn't produce such a complete piece of technology, then they really weren't worthy of doing this research. They could just resign and go home to farm.

All of a sudden, all the researchers in the aircraft carrier power research department started to move.

They all looked at the information seriously and cooperated with Academician Zhao's planning. Even if they had complete technology, how to proceed, materials, structure, size, mold ... Everything had to be done at the same time.

Moreover, these researchers were all elites. They had ready-made technology. To them, it was already the answer of $1+1 = 2$.

Therefore, they acted very quickly. It didn't take long for them to work together to plan the proportion of the semi-cold nuclear fusion power technology to be used on the aircraft carrier. They also needed to use the strengthening materials, components, and data...

"Since we've already come up with a plan, let's hurry up." Mr Lu immediately urged him. For this matter, he did not even pay attention to the Falcon flying device.

"Alright, Mr. Lu," Academician Zhao immediately said.

After that, the entire aircraft carrier's power department was mobilized. Regardless of whether it was researchers of all sizes or technicians of all kinds, they were all gathered.

Everyone worked together. Be it modeling or department production, everything was done very quickly.

Soon, a large semi-cold nuclear fusion power battery was produced.

After that, they conducted a collision experiment on the battery. It had to reach a certain degree of anti-collision ability before it could be installed on the aircraft carrier.

However, for the power of the aircraft carrier, it was not enough to rely on a semi-cold nuclear fusion power electromagnetic.

Therefore, Mr. Lu, Academician Zhao, and the others quickly rushed to make a few more semi-cold nuclear fusion power batteries. Then, they called the technicians and asked them to move all the batteries to the aircraft carrier.

Then, the top aircraft carrier technicians in the country were mobilized here and began to install the batteries on the aircraft carrier.

After the aircraft carrier was equipped with the semi-cold nuclear fusion power battery, Mr. Lu also instructed Academician Zhao to arrange for the aircraft carrier to conduct data testing.

When the test data was sent to him, Mr. Lu was shocked. In terms of power, after using this semi-cold nuclear fusion power technology, the enhancement was not just a little bit, but to a terrifying extent.

He immediately sent the data to the higher-ups. When the higher-ups saw the test data, they were equally shocked.

This semi-cold nuclear fusion power technology is actually so powerful?

Or rather, Academician Qin was actually so terrifying. After all, this was the technology he developed.

If one had to compare, the original driving force was an electric bicycle, but now it was a super sports car.

A leader immediately made a call and made a series of arrangements.

Since it was really possible, it was time to show it.

For so many years, every country had tried to conquer the Bermuda devil zone, but all of them had failed.

The losers included them.

The moment their aircraft carrier approached that area, their power would not be able to keep up. If they had not retreated quickly, they would have been like Beautiful's aircraft carrier, completely silent in that area of the sea.

This time, he could give it a try.

As long as they succeeded, they would be able to show off their fists to the other countries in the world and make them fear their aircraft carriers.

..

Time passed.

Not long after, all the countries received news that the aircraft carriers of the Eastern countries had applied for the Bermuda route.

This was also a signed rule.

As long as they applied for this route, it meant that they were trying to conquer the Territory of Bermuda. During this period, there was no friction between the aircraft carriers entering this area.

This news naturally caught the attention of all countries, and they all pointed their satellites in the direction of Bermuda.

Under the arrangements, the domestic aircraft carrier set off. Soon, they reached the international waters and quickly sailed towards the location of Bermuda.

This scene was also quickly transmitted to all parts of the world through satellites.

Very soon, the aircraft carrier entered the region of Bermuda.

Ordinary ships didn't dare to approach this area. Any slightly smaller ship would definitely be sucked into the Bermuda area.

This was definitely a very frightening thing. Therefore, ships would usually go far away when they reached the nearby area.

Mr. Lu, Academician Zhao, and some other leaders were already watching the situation from the satellite in front of a screen in the Chinese Academy of Sciences.

However, just as the aircraft carrier entered the Bermuda area, they realized that there were several aircraft carriers approaching from not far away.

This was the aircraft carrier of another country. Naturally, when they arrived in this area, they had no ill intentions. Instead, they were here to observe. Every time such a situation occurred, there would always be people who came to join in the fun.

Moreover, there were even times when there was competition.

The reason why the beautiful aircraft carrier had an accident was because he was in a hurry to prove himself. Unfortunately, he was not strong enough.

Next, everyone drove together towards the devil zone in bermuda. This scene was very harmonious and spread to all countries in the world.

It was so beautiful.

In the Research Strategy Department, Grace also saw the scene. Without hesitation, she gave the order, ""Are you confident in going in with them later? We invested a lot of money in this ship. Moreover, we upgraded it and installed that thing."

The order was immediately answered.

She clenched her fists tightly.

Previously, when Aurelia put out the fire, it could be said that their technology had been completely defeated and they had lost all face.

She had also lost a lot of face in front of those gentlemen. Now that they felt that she was inferior to Adolf, she naturally wanted to salvage the situation.

This was an opportunity.

After all, their current aircraft carriers used black technology. Although the technology was not perfect and would be scrapped after one use, it was not important. After all, no one knew.

As long as the results were out, it would be glory.

At this moment, a voice sounded, "" Ms. Grace, their aircraft carrier has begun to accelerate. It's obviously going to sprint towards Bermuda. "

Hearing this, Jiayis quickly looked at the satellite video. Sure enough, she saw the other party's aircraft carrier begin to move quickly.

Seeing this, she immediately gave an order. " Quick, speed up and catch up. This time, we'll have a fair and square battle with them. Let's see who can conquer this Bermuda Devil District. "

Very soon, Beautiful also began to speed up.

This scene naturally attracted everyone's attention.

Everyone understood what was going on.

Beautiful was causing trouble again.

The other party seemed to have just lost the match in the fire extinguishing incident in Aulia, and they were trying to get back at him.

This also made the onlookers excited. It seemed that they could eat melons again.

However, just as this thought came to their minds, they looked at the video that had been forwarded back, and their faces were filled with shock.

Inside the beautiful room.

Seeing what happened in the video, Jiayis's eyes widened in shock. "How could it be so fast?"

[Chapter 1815 An Unbelievable Scene!](#)

In the video, a scene that was unbelievable to Jiayis and the entire department appeared. As their aircraft carrier chased after the aircraft carrier of the Eastern country, the aircraft carrier of the Eastern country actually accelerated.

Moreover, the speed at which they accelerated was so shocking that everyone's jaws dropped. They actually left their aircraft carrier behind at a speed visible to the naked eye.

The people from other countries were still waiting to watch a good show through the video. The two sides were definitely going to compete again.

However, who knew that in the blink of an eye, the aircraft carrier of the Eastern country shot out like a rocket. It was so beautiful that it could not catch up at all. It was getting further and further away.

God, was he seeing things?

Although they were a little confused, they knew that they were not mistaken. The aircraft carrier of the Eastern country was so fast.

But what was the point of competing?

The victor had already been decided before the match even started, alright?

It was just like comparing the speed of a bicycle and a sports car. The bicycle would eat the exhaust gas as soon as it started running, and then it could only watch as the sports car disappeared without a trace.

Wasn't this the current situation?

In the blink of an eye, the aircraft carrier of the Eastern countries disappeared.

The aircraft carriers of various countries could no longer capture the images and could only lock onto them through satellites.

It was the same for Jiayis. Through the satellite footage, she could see that the aircraft carrier of the Eastern Huo country had quickly passed through the outer circle of Bermuda.

Soon, the satellite images began to blur.

This was because the enemy was about to enter the core region of Bermuda.

There was a storm here, and there was also a special magnetic field that affected the satellite's shooting. The satellite could not capture the image inside at all.

"Damn it!" Grace's expression was ugly. At the same time, she heard the exclamations coming from Fang Hang's side.

" Oh my god, what's going on? How can it be so fast? "

"Why are they flying so fast? We can't catch up at all."

" It's fake. Our speed should be the fastest in the world. Why is this happening? "

".."

These voices also stimulated Jiayis.

She also wanted to know why this was the case.

Why did that eastern country have every technology that was better than theirs? Once they wanted to compete with the other party, they would find themselves completely crushed by the other party.

This shouldn't be the case.

They were the true overlords of science.

" The enemy is definitely only this fast, " she immediately ordered. " You guys go ahead at full speed. Don't worry about anything else. Follow our original goal. After all, we installed that technology to conquer the devil zone in Beirut. "

" Only conquering the devil's zone in Beirut is the real winner. As long as we conquer it, we win. "

Jiayis 'words had obviously boosted the confidence of the people on the ship.

That's right, so what if the other party's speed was fast?

Their goal was not to compete in speed, but to see who could conquer the Bermuda Devil Zone.

At this moment, the other countries had already lost sight of the eastern country's fleet. The other party had entered the core region.

Unfortunately, their speed was too slow. They couldn't catch up or investigate.

..

The Devil Zone of Bermuda was known as the forbidden area of this planet.

No one knew when the Bermuda devil zone had appeared, because before it was first discovered, no one had ever set foot here.

However, after this place was discovered, it had never been conquered by anyone for more than 200 years. In fact, no one even had the right to conquer it.

This was because humans did not even have the ability to enter the core area.

Today, an aircraft carrier with incredible speed was approaching the demon zone.

The aircraft carrier had completely lost contact with Mr Lu and the rest, so it was up to the people on the aircraft carrier to decide what to do next.

The person in charge of this aircraft carrier was called Chen Dongliang, who was also a veteran navigator and navy officer.

He had a wealth of experience in all kinds of harsh sea environments.

Now, he had to make a choice in the terrifying environment of the Bermuda devil zone and conquer this place.

This matter was very important to him and everyone else.

Unfortunately, after being nervous for a long time, he finally discovered something very shocking. After the aircraft carrier entered Bermuda devil zone, he did not need to make any decisions at all. It actually rushed straight ahead.

Because the power was too terrifying, the complex environment did not affect the aircraft carrier at all.

Therefore, all he needed to do was to instruct his men to avoid the obstacles.

One had to know that once the beautiful aircraft carrier reached this place, it would have difficulty moving forward. After moving forward for a while, it would be the place where the beautiful aircraft carrier sank.

However, he could feel that the power of the aircraft carrier was enough to run amok in these places.

As expected, they soon arrived at the place where the beautiful aircraft carrier sank. However, after arriving here, the aircraft carrier was normal and was not affected.

No, the impact was that the speed of the aircraft carrier had decreased. After all, the environment here was too terrifying. The whirlpool of water tore at the aircraft carrier, affecting its speed.

Moreover, the further they went, the more they realized that the effect was greater and their speed was slower.

Even so, their speed was much faster than before.

After an unknown period of time, the beautiful aircraft carrier also arrived.

At this moment, their expressions were a little ugly because they did not see the aircraft carrier of the eastern country at all.

They didn't even see their wreckage. In other words, the enemy's aircraft carrier didn't sink and had safely passed through this area.
