

The Game 541

[Chapter 541 All Thanks To Boss Qin! Professor Li Kai Is Really Amazing! 2](#)

when qin lin arrived at linlin's laboratory, li kai was already fiddling with a heavenly wood tonghui in front of some testing machines.

There were also a few people in uniform helping out.

these were, of course, the researchers recruited by linlin's laboratory.

their previous task was to test the growth of the linlin watermelons planted in the villages and towns.

today, he was acting as li kai's assistant.

These assistants were naturally very excited. They already understood how important the things they were helping professor Li Kai test today were. It was related to a national-level experiment.

Although they were only helping professor Li Kai, they felt like they were very involved.

After that, he asked professor li to take a selfie with him and post it on his moments. His former colleagues and classmates would probably be envious of him.

At the side.

Chief Yan and Shen Li were also fiddling with the multimedia equipment.

Professor Ren and Minister Lu also wanted to see the results when Li Kai was doing the test.

They had the greatest expectations for the heavenly wood passage.

Qin Lin was the only one who was calm and composed.

After all, he already knew the result.

The game's Takagi tortoiseshell had A +1 mental stress effect attribute, so it would definitely achieve the results that the Chinese Academy of Chemical Sciences wanted.

"Boss Qin!" Chief Yan saw Qin Lin and immediately greeted him.

"Chairman Qin!" shen li.

Li Kai also turned to look at Qin Lin and said teasingly, " "Old Brother Qin, you're really good at picking the right time."

...

Chinese Academy of Sciences.

Professor Ren and Minister Lu were already waiting in the multimedia office.

There were some researchers behind the two.

they were all researchers of the u31i drug, and a few of them had participated in the cultivation of the heavenwood tongshi. they had mixed feelings today.

After all, they couldn't make a breakthrough in the cultivation of the heavenly wood Tongshi, so Minister Lu had to find outside help.

However, professor Li Kai seemed to have come up with a result in such a short time. It was a huge blow to them, so they naturally had mixed feelings.

They both hoped that the results were not up to standard and would not make them seem too incompetent, but they also hoped that the results were up to standard so that the U31i drug research could have a breakthrough and proceed to the next step of research.

"why isn't it connected yet?" minister lu looked at the multimedia screen with a slight frown.

"Minister Lu, are you nervous?" professor Ren asked.

Minister Lu admitted, "I'm just nervous."

How much money did he spend to cultivate this Tian Mu Tong Gu?

He was under a lot of pressure, alright? Otherwise, he wouldn't have thought of getting external help.

Moreover, if professor Li Kai's results met the standard this time, how amazing would the speed be? It also proved how good professor Li Kai was in this area.

If he encountered similar problems in the future, he would have more confidence. If the Chinese Academy of chemistry couldn't solve it, he would ask professor Li Kai.

Professor Li Kai could back him up.

At this moment, the image finally appeared on the multimedia screen.

Chief Yan's figure appeared on the screen. "Minister Lu, professor Ren, can you hear me?"

Yan, cut the crap, " Minister Lu said. turn the camera to professor Li Kai. Has he started the test? "

"The test has already begun." Chief Yan didn't dare to hesitate. As he spoke, he turned the camera to Li Kai and his assistants.

When Minister Lu and professor Ren saw Li Kai, they also paid attention to him.

Now, it all depended on professor Li Kai's test results.

if he still didn't reach the target, he didn't know how long it would take for him to make another breakthrough.

Li Kai was already fiddling with a test tube of liquid in his hand. He was also a little nervous.

After all, he knew that he had cheated the world and cheated openly.

Now, because of the special soil, the heavenly wood tonghuang had been affected the first time he had been lucky, causing a genetic mutation. He naturally wanted to complete the mission this time and deal with it.

He was like a student who was taking an exam. Everything would be fine if he passed the exam.

Otherwise, he might have to plant it a second time. By the time the second batch of the heavenly wood Tongshi that was affected by the special soil appeared, he would have to continue to waste his energy and brain to compile new data and thesis knowledge.

This really wasn't something a human should do.

So, he prayed that he would pass this once, so that Minister Lu and the others would not ask him to do such things again.

Otherwise, he would feel that his life span would be reduced if he did this a few more times.

It didn't take much time to test the Heavenwood Tongshi. It only took half a day. With the help of his assistants, Li Kai's test results were out.

One of the assistants exclaimed in joy, " " professor li kai, your training is a success. the mental stress effect is more than twice the standard value. "

Chief Yan heard the voice and immediately ran to Li Kai, full of anticipation, " "Professor Li Kai, any results?"

"Yes, it's more than twice the standard value." li kai's face was also filled with joy, and he secretly heaved a sigh of relief as he spoke.

Fortunately, he didn't have to continue compiling new data and thesis knowledge. It was great to be able to bluff his way through this time. He hadn't spent time with xiuwan in a while, and he kind of missed the smell on her.

"2x2!" Chief Yan couldn't help but be shocked.

Even the Chinese Academy of Sciences was not as good as the ones that had been training for so long.

This time, professor Li Kai had directly doubled the effect.

In the multimedia office of the Chinese Academy of Sciences.

[Chapter 542 All Thanks To Boss Qin! Professor Li Kai Is Really Amazing! 3](#)

Minister Lu and professor Ren stood up almost at the same time when they heard the voice from the video.

"It's twice the effect? I didn't hear it wrong, right?" Minister Lu asked professor Ren with uncertainty.

"En!" professor ren nodded his head in confirmation. " this is really amazing. the mental stress effect is doubled. then, there will be a lot of room for manipulation in the u31i drug research. "

Minister Lu directly looked at the cultivation experts from the Chinese Academy of Sciences and said, " after that, ask professor Li Kai to send over the experimental data and information. You guys must grasp it carefully. Don't wait for professor Li Kai to cultivate the seeds and give them to us. We have ready-made seeds, but they can't be planted.

The few cultivation experts looked embarrassed.

Their abilities were not as strong as professor Li Kai's, but it was not to the extent that professor Li Kai's finished products could not survive.

However, they didn't dare to refute Minister Lu. After all, they had wasted too much money on cultivating the Tianmu Tong Gu before. Now, professor Li Kai had already achieved more than twice the standard effect in such a short time.

this was probably not even the first batch of funds that had been sent over, right?

To be honest, a monster like professor Li Kai was really a blow.

professor ren had also asked li kai to do this kind of important research test several times.

It was not until the evening that professor Ren was completely relieved when he got the same results several times.

After ending the video call, Minister Lu still said with a face full of joy, "Professor Ren, since the results are out, let's inform professor Huang and professor Jin. They have their own experiments to do."

Professor Ren nodded and took out his phone. He added professor Huang and professor Jin into a group and opened a video request.

On the other side, in another laboratory.

Professor Jin was holding a magnifying glass and carefully observing some seedlings.

These seedlings were grown from the seeds of the celestial wood Tongshi that had been sent over by the Chinese Academy of Sciences.

This wasn't the first time he had participated in a cultivation experiment to help the Chinese Academy of Sciences.

However, this time, he was the one who cared the most.

Firstly, this was a national-level experiment, and secondly, it was rare for him to be able to participate with professor Huang and professor Li Kai, two top experts.

it was difficult for outsiders to understand such a competition of mutual appreciation, but in terms of research, it was a rare opportunity.

water this batch of seedlings with the No. 3 nutrient solution that I've prepared later. Professor Jin stood up after he was done with his observation and instructed his assistant.

the progress of his cultivation in the growth of the seedlings was not bad.

As for whether the Chinese Academy of Sciences 'requirement for mental stress effectiveness was met, he could only wait until the plant was tested.

He couldn't guarantee anything when it came to experiments. He could only rely on his own knowledge to try his best to cultivate and guide the results in this area.

Otherwise, the experts from the Chinese Academy of chemistry wouldn't have had no results and needed their help.

He just didn't know how professor Huang and professor Li Kai were doing.

Professor Jin was still thinking about it when his phone rang with a video call request. He opened it and saw that it was a video call request from professor Ren.

he immediately clicked 'confirm', and a group video appeared on his phone. professor ren and professor huang were already online.

"Professor Huang, professor Ren," Professor Jin greeted the two.

Professor Huang also said, "professor Jin is here too, so we're only missing professor Li Kai, right?" Professor Jin, how's the training going? my side is growing very well."

Professor Jin replied, " the growth on my side is also going according to plan. As for the effect, we'll have to wait until it's fully grown and test it. If it has an effect on mental stress, I'll use this method to in-depth cultivate it. I just don't know what's the situation on professor Li Kai's side.

Professor Ren couldn't help but sigh when he heard the conversation between the two. These two were top cultivation experts, but they couldn't produce results on the heavenly wood Tongshi in a short time.

So, professor li was really amazing.

professor Huang and professor Jin, " professor Ren said. the results from professor Li's side have come out. The mental stress effect is twice that of the marked value!

" ? ? ? " Professor Jin.

" ? ? ? " Professor Huang.

The two professors looked at professor Ren in the video with the same expression.

There was only one meaning in his eyes, "are you joking?"

[Chapter 543 Pay-To-Buy, Buy, Buy! They're All High-Quality Fish! 1](#)

Professor Huang and professor Jin didn't react to professor Ren's words.

There were still two more months to go before the Tenmu Tonghui's growth cycle. Even if they wanted to test their mental stress value, they should wait until the Tenmu Tonghui was almost mature.

Was professor Ren going to tell them that professor Li Kai's heavenly wood tongshu was about to mature and that the data had been tested?

This should be impossible.

Professor Ren could understand professor Jin and professor Huang's shock. He sighed and said, " professor Li Kai is more experienced in the genetic research of this kind of crop. Some of the Tianmu Tongshi he experimented on should have undergone genetic mutation. It probably only needs a month to grow, and the mental stress effect is twice as strong as the required.

Professor Huang and professor Jin were stunned when they heard the news.

Professor Huang opened his mouth but did not know what to say. After a while, he exclaimed, "Awesome!"

"professor li kai, you're being unreasonable!" professor jin's eyes widened.

"It's indeed a little unreasonable." Professor Ren agreed.

if everyone could solve a cultivation experiment like this, the desert management plan would have been completed a long time ago. perhaps the mars transformation plan could be carried out in ten years.

After professor Ren informed the two of them of the news, he also cut off the video call. He still had to see the detailed test data from professor li.

Therefore, only professor Jin and professor Huang were left in the group video, looking at each other.

"As expected, there's no such thing as a false reputation," "I wanted to compete with professor Li Kai, but who knew this would be the result?" professor Jin said with emotion.

"No matter what, we've really embarrassed ourselves this time," professor Huang agreed.

The two of them chatted for a while before exiting the group.

professor jin took out his phone and looked at the saplings of the tianmu tongtong in the experimental site. he sighed and opened his wechat to send a message to his circle of friends. This time, he admitted defeat to professor Li Kai and did not have any temper at all!

After this post was posted, professor Huang quickly liked and commented on it.

[professor Huang: I admit defeat as well. Let's work hard together next time!]

Professor Jin:

People like professor Jin and professor Huang naturally had the most friends in the scientific community.

Everyone knew that these two professors were experts in the field of genetic crop cultivation. Now that these two professors were both willing to admit defeat to the same person, it was hard not to attract attention.

Moreover, everyone knew that professor Li Kai had been very famous recently.

Seeing this, they couldn't help but comment and ask, "

"it seems like something big has happened!"

"Professors, what's wrong with professor Li Kai?"

"What did professor Li Kai do this time?"

"..."

Professor Jin was an open-minded person, so he didn't hide anything. He replied in unison, ah, I helped professor Huang and professor Li Kai to carry out a National cultivation experiment at the Chinese Academy of Sciences. I wanted to compete with the two professors, but who knew that I would be left so far behind by professor Li Kai.

Professor Huang also replied to this unified reply, " I've been left behind by professor Li Kai too. This is the first time I've admired someone so much.

This time, the people from the scientific community were shocked.

There was a lot of news about professor Li Kai on the internet, and everyone knew that he was amazing. But now, they had a new understanding of how amazing he was.

Professor Jin and professor Huang were big names in gene cultivation research, the top experts. This professor Li Kai was able to make these two professors admit defeat with the help of the Chinese Academy of Sciences once. Wasn't this too awesome?

In the past, it was hard to say whether professor Huang or professor Jin was the leader in the field of gene cultivation in China. However, the leader might be professor Li Kai now.

This news was too shocking. It spread quickly in the scientific research community as if it had wings. In a short time, more than half of the scientific research community knew about this.

Especially when some big names asked around through the Chinese Academy of Sciences and found out that the news was true, they immediately confirmed professor Li Kai's position.

Li Kai didn't know any of this. He hadn't even stepped out of the martial world yet, but there were already legends about him everywhere.

...

Two days passed in the blink of an eye.

In Linlin villa, Qin Lin was sitting in his office. He had just caught the 35 fish that refreshed today when he saw Li Kai leading Shen Li into his office.

"Old brother li, what are you guys doing?" Qin Lin looked at the two of them in confusion.

"Brother Qin, there's a document that I need you to sign." as li kai spoke, he handed a document to the man.

Qin Lin took the document and looked at its contents. He asked in confusion, " "professor evaluation documents, chinese academy of sciences evaluation, brother li, are you sure you need my signature on this document?"

This was a document of brother Li's evaluation as a professor, and it was even from the Chinese Academy of Sciences. This was probably the highest level of evaluation, right?

However, this was given to old brother Li by the Chinese Academy of Sciences, so he didn't need to sign anything.

Old brother li, on the other hand, had been an Associate Professor before, but now he could be considered a real professor.

"A-Qing took the wrong one." Li Kai seemed to have realized what was going on. He put away the professor evaluation document and took out a folded document from his pocket.

“ ? ? ? ” Qin Lin looked at this scene with a trace of suspicion.

Why did he have a feeling that this old brother Li was deliberately letting him see the ranking document?

Versailles was stunned. Did he just say that he was a professor?

Li Kai seemed to have felt Qin Lin's gaze and hurriedly explained, " "Well, brother Li, don't look at me like that. I didn't mean to take the wrong document."

[Chapter 544 Pay-To-Buy, Buy, Buy! They're All High-Quality Fish! 2](#)

"I'm confessing." Qin Lin teased as he took the document from Li Kai. After taking a look, he was surprised. "The first batch of funds from the Chinese Academy of Sciences is as much as 5 million?"

"President Qin, there aren't many national-level assisting experiments left, and this is only the first one." Under normal circumstances, " Shen Li explained immediately, " the 5 million might not be enough to assist in cultivation experiments. The Institute of Chemistry needs to make a few more sums.

After all, it's difficult for the Chinese Academy of Sciences to find outside help. It's just that it's amazing that Professor Li came up with results so quickly. The Chinese Academy of Sciences might still be surprised.

Qin Lin roughly understood what Shen Li meant.

A national-level experiment wasn't easy to complete. Often, a national-level experiment would cost hundreds of millions, or even tens of billions.

For example, if he didn't take out the game seeds for the cultivation experiment this time, it would be impossible to complete it so quickly. There wasn't even any special soil for Old Brother Li to get it himself. Let alone 5 million for one, it might not even be enough for 10, 20, or 30 of them.

Now, because he had taken out the planting shuai guo from the game, the results of the experiment were all done in one go.

Even if Old Brother Li used those expensive materials to produce those nutrient solutions, it would only cost him 500,000 Yuan.

The first batch of money from the Chinese Academy of Sciences still had 4.5 million Yuan left.

Shen Li also smiled and said, " the results of this National cultivation experiment are out. There are still 4.5 million left from the first batch of 5 million. I'm afraid only Professor Li Kai has such a thing.

Qin Lin looked at the document in his hand and asked in confusion, " "President Shen, are you sure it's okay not to return the money?"

Li Kai's document was to use up the money.

Shen Li asked, " Chairman Qin, this money has to be settled with the Chinese Academy of Sciences in the end. But returning it would break the rules. In our case, we produce results in advance. There are unspoken rules about the surplus funds of the entire scientific research community.

"there are unspoken rules?" Qin Lin was surprised.

it's a kind of reward for the research team, " Li Kai explained. usually, if a research project is completed early and there's a surplus of funds, the experimental unit will buy and buy before settlement. They try to use up the funds as much as possible.

of course, this paid money has to be slightly related to the project. Even if you say that you need to buy an Audi to transport materials, it's fine.

so, I need a low-temperature experimental site for my cultivation experiment. It's not a problem to spend 4.5 million to build this experimental site, right? "

"in any case, it's fine as long as we spend all the money before the money is paid for the celestial wood tongshi."

"I understand now." Qin Lin felt that Li Kai and Shen Li's words made sense.

after all, those who were able to spend money on their own must have completed their tasks within their plans. compared to those who were always short of funds and had to keep applying for funds, these people who could spend money on a whim should be praised.

For example, this time, old brother li had used the remaining 4.5 million Yuan from the 5 million Yuan He had earned from this kind of cultivation experiment to buy and buy.

If it was someone else, they might need 5 million for 10 or 20 of them and still not get any results.

in this case, the chinese academy of sciences would rather you pay for it!

This kind of unspoken rule was also a privilege of the big shots of science. After all, only the big shots of science had the opportunity to buy and buy.

Qin Lin signed the document after understanding it. The money wouldn't be returned to the Chinese Academy of Sciences anyway, so it would be left for Linlin's laboratory to build a low-temperature experimental site.

Li Kai's face lit up when he received the document that Qin Lin had signed.

This low-temperature environment was naturally for his low-temperature genetic research experiment.

Although he had been receiving praise from the outside world during this period of time, he knew that none of this belonged to him. It was all too unreal.

Now, because of these compliments, he was a full professor at the Chinese Academy of Sciences.

This made him feel more and more that he had deceived the world to gain fame, and the pressure was huge.

therefore, he was eager to return to the low-temperature genetic experiment.

With Qin Mo's ready-made watermelons that were not limited by seasons, he did not believe that he would not be able to research results.

This was the only result that truly belonged to him, and it could more or less give him some confidence.

As he thought about it, Li Kai passed the document to Shen Li and said, "President Shen, I'll have to trouble you to quickly build this low-temperature experimental site."

"Yes, don't worry, professor Li," Shen Li nodded.

When Qin Lin saw the low-temperature environment, he had already guessed that brother Li was doing this for the low-temperature genetic experiment.

Moreover, old brother Li's fighting spirit was obviously very high now, and he hoped that old brother Li's experiment would be successful.

A few days passed in the blink of an eye, and this batch of celestial wood Tongshi had also matured, entering the cultivation and planting stage.

Shen Li spent the remaining 4.5 million Yuan in the shortest time possible, claiming that it was an experimental site needed for the cultivation of the heavenly wood Tonghui.

Meanwhile, Qin Lin had received a call from the aquarium director, Ling Xuan, and arrived at the aquarium.

The aquarium looked a lot different from before. Through the glass, he could see all kinds of aquatic plants in the water. There were also special stone landscapes and some aquarium-specific underwater lamps.

Other than the lack of fish, this was already an underwater world.

Seeing him, Ling Xuan trotted forward and said, boss, the other aspects of the aquarium have been fully prepared. We're just waiting for your ornamental fish.

"Alright, I got it." After Qin Lin left the aquarium, he went to Zhao moyin's office and told her about the ornamental fish. Then, he went to Ming city.

[Chapter 545 Pay-To-Buy, Buy, Buy! They're All High-Quality Fish! 3](#)

It was much more difficult to bring out 2000 ornamental fish in one go than wild fish of 1 or 2 grades.

First of all, some ornamental fish were delicate, and many of them were aggressive. Some of them also had high requirements for water quality.

So, before he moved the ornamental fish, he had to prepare enough aquarium tanks, fill them with fresh water, and divide them into categories.

This time, Qin Lin rented a warehouse in the suburbs of Ming city without a surveillance camera. He ordered an aquarium with enough space to store 2000 ornamental fish and filled it with water.

It was already afternoon when he was done with his preparations. He checked the warehouse a few times and found that there were no surveillance cameras, so he locked the door and entered the game to move the 2000 ornamental fish.

This was definitely not a small project.

It was already evening when he moved all 2000 ornamental fish out of the game. He then contacted Zhao Liyuan, the transport team, and asked him to bring some people over to transport the fish tomorrow.

Early the next morning, Zhao Liyuan arrived with his men and loaded the 2000 ornamental fish from the game into a truck.

Zhao Liyuan looked at the fish in the aquarium and said, "President Qin, all the fish are beautiful this time. They're all ornamental fish."

there's a new aquarium project in the villa," Qin Lin explained. I bought these to put in the aquarium.

The size of the aquarium that had been transformed from the original Hall had been expanded, and 2000 ornamental fish was obviously too little. However, they could catch ornamental fish every day, and they could slowly replenish their stock later. There was no need to worry about not having enough.

Moreover, it was so troublesome this time because he had accumulated more than 2000.

After that, he would move it from the game once every few days. From the warehouse in you city, he would directly move it to the mountain villa. That would be simple.

Soon, all the ornamental fish were loaded into the car, which was then started to transport them to Linlin Manor.

Qin Lin got into Zhao Liyuan's car and sat in the passenger's seat. He looked at the game in his mind's screen the whole way, planning to finish what he had to do today.

The mountain products of Mount goddesses did not spawn.

However, he found a yellow rosewood tree today and got three pieces of quality 2 yellow Rosewood wood.

After that, it was fishing.

His luck seemed to be pretty good today. He had just caught his first fish when a system notification rang in his mind.

[the fishing rod has met the upgrade requirements. You may head to the smithing shop to upgrade the fishing rod to Level 3!]

Qin Lin was stunned.

The fishing rod had been upgraded again.

When it leveled up, it could catch a quality 1 ornamental fish, and now it could catch a quality 2?

if that was the case, it was great news that the aquarium was about to be opened.

However, he couldn't enter the game now, so he could only wait until he got back.

When the convoy arrived at Linlin villa, he had already called Ling Xuan and Chen dabei to wait in the parking lot with their men.

Chen Dabeai's security team was still in charge of moving the things. As for how to move and put the fish into the aquarium, it was up to Ling Xuan, the director.

After Qin Lin got out of the car, Chen Dabeai came up to him with a group of security guards. "Boss!"

After giving his greetings, he directed his experienced men to start moving the fish.

The aquarium tanks were unloaded one by one and placed in the open space in the parking lot. They would be moved to the aquarium later.

Ling Xuan's eyes lit up when she saw the ornamental fish being transported down. "Boss, where did you buy these fish? These are all the best ornamental fish."

It's not just the appearance, but also the color and the aesthetic value. It's much better than ordinary ornamental fish. Boss, you can buy so many high-quality fish at once. You're amazing.

"There will be more in the future," Qin Lin said with a smile.

Ling Xuan observed, and suddenly revealed a look of disbelief. Boss, quickly come and look at these exquisite Arhat fish. There are actually fish eggs.

"Is it strange for Arhat fish to have eggs?" Qin Lin asked, puzzled.

Ling Xuan looked at Qin Yu in surprise. Boss, it's not strange for Arhat fish to have eggs, but a premium Arhat fish is at least 10,000 to 20,000 Yuan. Also, to control the source of these premium ornamental fish, the breeding companies will add coloring and so on to prevent them from reproducing.

These Arhat fish can actually lay eggs, which means we can reproduce. These fish are all high-quality fish, and even if we can only reproduce a few of them, our Linlin villa will have the chance to become a high-quality ornamental fish supplier.

"Boss, do you know what the value of our ornamental fish industry was last year? It reached 26 billion in 2021."

Qin Lin's eyes lit up when he heard this.

This was something that he had never thought of. It was reasonable for expensive fish cultivation companies to control the reproduction ability of the fish, which could monopolize the market.

However, his fish was a wild fish caught in the game, and its reproductive ability was not affected at all.

The most important thing was that these were all Grade 1 ornamental fish, which added +1 to the view. They were prettier and more beautiful than the ordinary ornamental fish outside.

If these fish could be bred, they would definitely be more popular than ordinary ornamental fish, right?

Thinking about the 26 billion RMB ornamental fish industry that Ling Xuan had mentioned, it was definitely worth doing. It could add another special feature to the villa.

Ling Xuan walked around the boxes and looked at them one by one. She said with a little regret, boss, these are all high-quality ornamental fish. The aquarium will definitely attract people if there are more

than 2000 of them. The only good thing is that not a single one is enough to be the highlight of the aquarium.

[Chapter 546 A Slightly Awesome Level 3 Silver Fishing Rod! Skill: Koi! 1](#)

Qin Lin knew what "the school's most prized fish" meant.

It was the rare and expensive fish.

Although quality 1 ornamental fish were more beautiful than ordinary ornamental fish, they were still not qualified to be the highlight of an aquarium.

Moreover, the most important fish in the restaurant had to be the kind of fish that stood tall in the flock and was very expensive, such as the White Yellow tiger that the dwarf Ah Ni had given him.

Most importantly, his fish were all at grade 1, and ordinary White Yellow Tigers might not be able to hold on.

This reminded him of the upgraded fishing rod.

After upgrading his fishing rod to Level 3 silver fishing rod, if he could catch quality 2 ornamental fish as he had guessed, then wouldn't he have the highlight of the school?

After moving the 2000 ornamental fish out of the car, Chen Dabeai brought his men to the aquarium. Then, under the instructions of Ling Xuan and the aquarium manager, they put all the ornamental fish into the water.

More than 2000 quality 1 ornamental fish were swimming in the water, and the school of fish was indeed quite spectacular.

The only problem was that there were quite a number of Arhat fish. Even if there was a large area that was specially isolated, some Arhat fish would still bump into each other.

The Arhat fish was an iron-headed doll. When they met their companions, the male would beat the other party, and the female would beat the other party. They had to beat each other up.

"You guys have to think of a way to get this Arhat fish." Qin Lin looked helplessly at the two Arhat fish that were bumping their big heads against each other.

This guy was really stubborn. No wonder he had such a big bump on his head.

"We'll think of a way to deal with it." Ling Xuan nodded. Indeed, she couldn't let these Arhat fish fight as soon as they met.

boss," she continued, "if we want to cultivate ornamental fish, I'll need to hire a very professional ornamental fish cultivator.

well, if you have a suitable candidate, poach him first. I'll explain it to human resources. The treatment is not a problem. When Qin Lin heard that the ornamental fish market was worth more than 26 billion Yuan, he wanted to try it out.

Therefore, it was necessary to hire a professional ornamental fish trainer.

It didn't matter how big it was. It was good to let Linlin Manor have another specialty product.

After handing everything over to Ling Xuan, he left the aquarium and went to the warehouse as soon as possible to move today's items out of the game to the villa to replenish his stock.

It was already too late for her to return from Ming city today.

After returning to the villa, Qin Lin hurriedly returned to his office. He looked at the screen in his mind and controlled his game character to go to the forging shop in the ore town.

He clicked on the NPC in the forging shop, and his game character received a notification:

your fishing rod meets the requirements for an upgrade. Would you like to upgrade it? "

Qin Lin felt that this question was nonsense.

It would definitely be upgraded!

Not long after, he received another system notification.

[the copper fishing rod has been successfully upgraded to the silver fishing rod. The seed store owner is now able to make special level 3 bait that can be used with the silver fishing rod!]

After the fishing rod was upgraded, the level of the bait that could be purchased in the seed store had also been upgraded.

He immediately controlled his game character to return to the farm, then closed the office door and entered the game to see the upgraded silverfish rod.

The level 3 silver fishing rod was more beautiful than the copper fishing rod. It was made of silver and gave people a sense of magnificence.

Silver fishing rod

[power accumulation lvl 3, able to fish deeper. With lvl 3 bait, able to fish a wide variety of fish, able to fish higher quality ornamental fish, and even have a chance of catching some very special fish!]

The silver fishing rod could catch fish of higher quality.

In other words, this silver fishing rod could really catch quality 2 ornamental fish?

Moreover, the fishing rod had another attribute, which was that it could catch some very special fish.

This made him a little curious.

A quality 2 ornamental fish isn't special enough? There's actually an additional attribute?

After reading the information of the fishing rod, Qin Lin immediately exited the game and returned to the office to look at the light screen in his mind. Then, he controlled his game character to go to the seed store to buy LV3 bait.

[bait: LV3]

[the owner of the seed shop is a fishing enthusiast. This is a special bait that he made. It needs to be used with the level 3 silver fishing rod in the game to work!]

After buying the bait, Qin Lin immediately controlled his character to return to the river and start fishing again.

When he caught his first fish today, there was a notification that his fishing rod had been upgraded.

There were still 34 fish to catch.

Bait.

He threw out the fishing rod.

Almost in an instant, a fish was caught.

[you've harvested a wild black carp (quality 2)]

The speed at which this bait took the bait was obviously faster than a level 2 fishing rod.

He cast the bait again and continued to cast the fishing rod!

[you've caught an ornamental Arhat fish (quality 1)]

[you have harvested a wild grass carp (quality 2)]

[you've obtained an ornamental swallow (quality 1)]

...

[you've obtained an ornamental albino yellow tiger (quality 2)]

After catching nine fish in a row, Qin Lin's eyes lit up when he saw the grade 2 white Yellow croaker.

Of the money he had spent on the Linlin villa, more than 600000 had been from selling this Grade 2 white Yellow tiger.

Now, a level 3 fishing rod could directly catch an albino yellow tiger from the river, which meant that the level 3 silver fishing rod could indeed catch quality 2 ornamental fish.

Qin Lin didn't hesitate and continued to cast the fishing rod. He could still catch 20 more fish today.

[you have harvested a wild grass carp (quality 2)]

...

[you've harvested a wild ornamental zebra fish (quality 1)]

...

Using a level 3 fishing rod, he caught 25 fish in a row, and there were no more normal quality 1 wild fish.

The lowest quality was wild fish of 2.

Was this a Grade 1 wild fish that had already been eliminated and was no longer qualified to appear?

It must be known that even in reality, a Grade 1 wild fish was something that ordinary people could rarely eat. This was a little extravagant.

He continued to cast the fishing rod and finished the last 10 fish.

[you've caught a wild carp (quality 2)]

[you've obtained a wild sightseeing golden pineapple (quality 1)]

...

[you've obtained a wild albino yellow tiger (quality 2)]

[there doesn't seem to be any more fish in the river. Please wait for the refresh to resume!]

When the last fish of the day was caught, it was another Grade 2 white Yellow tiger.

He managed to catch two white Yellow Tigers in one day.

The probability didn't seem low.

Moreover, the two white Yellow Tigers were worth 1.3 million in total.

If he could fish like this in the beginning, why would he still sell watermelons?

Qin Lin did a quick calculation. After the fishing rod was upgraded to Level 3, he had caught a total of eight quality 1 ornamental fish, two quality 2 white Yellow Tigers, and the rest were quality 2 normal wild fish.

Sure enough, the level 3 fishing rod no longer looked down on the quality 1 wild fish, and even the number of ornamental fish it could catch had changed from 3 to 10.

He didn't know if the number was fixed or random.

Then, Qin Lin entered the game and went to the pond. He saw the remarks of the two Grade 2 white Yellow Tigers:

[wild albino yellow tiger: Grade 2!]

[this is a very beautiful fish. Aesthetics +2, taste +2, deliciousness +2, desire to buy +2!]

The remarks were almost exactly the same as the one that the dwarf ah ni had given.

...

The next day.

Qin Lin was transporting the game's items to the villa. Because of the two white Yellow Tigers 'harvest yesterday, he immediately went to the office to start fishing.

[you received a gu]

...

[you received a Gu]

[you've harvested a Wild Blood red fish (Grade 2)]

He caught 10 fish in a row. When he saw the grade 2 blood red fish, he stopped subconsciously.

"This fish," Qin Lin muttered.

I've read about Scarlet fish before when I was looking up ornamental fish. It seems to be a very powerful fish.

The first thing he did was to search for the blood red fish, and the information popped up very quickly.

The blood-red fish was a foreign name, but in China, it was called the blood-red Dragon. It was a variant of Arowana. Its physical characteristics were very beautiful, and its color was very bright. The key was that the blood-red scales on its body were very hard, like dragon scales.

moreover, the red fish only appeared in the north of lake syntarram in Indonesia, and there were very few of them.

This was not the most important thing.

This fish was one of the most popular ornamental fish in the upper-class society, and it was also one of the three biggest IQ taxes for ornamental fish in the eyes of ordinary people.

This was because a blood-red Dragon like this was worth at least three million.

in two auctions, the price of the two exquisite blood dragons had reached 5 million, which was like a fish for a house in a big city.

Things in the world were so wonderful. Ordinary people would ridicule this fish as intelligence tax and say that it would be the same if it was braised. They even defined the rich people who bought this fish as people with brain damage.

However, if there was a way, the supply of this fish would be in short supply in the circle of rich people. Ordinary people would not even have the chance to see it.

And just now, he had fished up a house in a big city!

after all, the blood red dragon produced by the game wouldn't be any worse than the two at the auction, right?

Qin Lin continued to fish. He planned to finish all the fish for the day and then enter the game to take a look at the blood Arowana.

As soon as the fishing rod was thrown out, there was a movement immediately.

[you've caught a Wild Blood red fish (Grade 2)]

"? ? ?"Qin Lin was stunned when he saw the fish he caught again.

This ...

Two rooms?

the probability of a 2 grade ornamental fish was a bit high.

With such a probability, if he could catch two blood red fish a day, he would get 60 fish a month, which meant 60 houses in the big city. There were more than 700 houses in the city in a year.

However, there shouldn't be such a probability. Even if he could catch that many, the rarer something was, the more expensive it would be. If he caught more, it would definitely become worthless. Perhaps if he took out more than 700 fish, each fish would only be worth tens of thousands of dollars.

Therefore, it wasn't appropriate to take out too many of these top-class ornamental fish. Otherwise, not only would they become worthless, but they also wouldn't be able to explain their origins.

He continued to throw out his fishing rod to fish.

Next were normal ornamental fish and quality 2 wild fish.

until the last fish was caught.

[you've obtained a skill, koi (special)!]

[there doesn't seem to be any fish in the river!]

“ ? ? ? ”Qin Lin subconsciously looked at the last fish he caught.

He could understand the koi fish.

He didn't understand the skill koi, and there was an additional word " special " at the end of the notification. Was this the special fish mentioned in the remarks of the fishing rod?

Qin Lin was very curious. He immediately got up and locked the office door, wanting to enter the game to check the remarks.

The first was the two Blood Dragons.

The two blood-red Dragons were indeed very beautiful. They were completely red and had a hint of gold.

The most important thing was that the fish scales on their bodies were very beautiful. They didn't look like fish scales at all. The shape was strange, but it was very beautiful.

This was probably the reason why it was regarded as a dragon scale!

mutated Blood Red Dragon: Grade 2!

[this is a very beautiful mutated Arowana. It is very rare and expensive: [aesthetics +2, taste +2, deliciousness +2, desire to buy +2, odd-shaped scales +2!]

As expected, the taste and deliciousness of any ornamental fish were essential.

This also meant that the ornamental fish's first priority was to be eaten.

The other attributes were +2 in viewing and desire to buy, just like the White Yellow tiger, which was very attractive.

On the other hand, the blood-red Dragon had an additional attribute of odd-shaped scales +2.

After all, since the scales were treated as Dragon scales, they had to carry some special attributes.

Then, Qin Lin looked at the last skill koi he caught. When he saw the skill koi, his face was full of disbelief.

This fish was quite impressive. No wonder it was a special fish.

[Chapter 547 The Magical Koi Fish! The Shop Owner's Connections Are A Bit Awesome! 1](#)

Koi fish could grow very big. 50 centimeters was very common, and the biggest koi fish in the world was two meters.

The koi fish in front of Qin Lin was probably two meters long. It was well-built, colorful, and had many patterns.

He had never seen such a big fish before.

Such a huge koi, just its figure alone was very attractive, right?

Qin Lin was even more surprised when he saw the remark of the koi fish:

[skill: koi fish: special]

[this is a very special koi fish. It's two meters long and very beautiful. It has +2 in appearance,+2 in viewing ability, and +2 in attractiveness to children!]

[this is a greedy koi, and it also has a special skill: As long as the children threw a coin at it, it would play with the children, blow a love-shaped bubble at them, and then take the coin away and put it somewhere else.]

Qin Lin was a little dumbfounded when he saw the note.

a greedy koi?

Legend had it that in the tuibei map, there was a map of carps transporting money to build a nest. It was said that carps had the ability to transport money to build a nest, which represented wealth.

this wasn't a f * cking legend?

In addition, this skill of spitting bubbles after receiving money was quite awesome.

It was normal for fish to blow bubbles, but there were very few fish that would play with children and blow bubbles at them.

There was almost no one who would take money from a child and then blow bubbles, right?

More importantly, the bubbles that he spat out were in the shape of a love heart, which was even more incredible.

Most importantly, children made up the majority of the Aquarium's customer base.

In fact, in many aquariums in Shanghai, children's tickets were more expensive than adults'.

Many parents only went to aquariums because of their children.

The fish also had an attribute of +2 attraction to children, so it would definitely be very popular with children in the aquarium.

In addition, the +2 appearance and +2 aesthetic attributes were also effective for adults. It was even one more attribute than the blood-red dragon and the albino yellow tiger, which were purely for aesthetic purposes.

Qin Lin had thought that the two quality 2 blood-red Dragon ornamental fish would be the highlight of the Linlin aquarium.

Who knew that the system would give him such a big surprise.

The big guy in front of him was the real treasure.

Although this skill koi had no price in the outside world, the world's most expensive ornamental fish, Loulan, was a koi fish. It was worth more than 20 million yuan, which was more than the blood red dragon.

One of the reasons why Loulan koi fish were so expensive was their beauty. It was said that the colors of the Loulan koi fish were as beautiful as a Loulan girl, hence the name Loulan.

In fact, no one had been able to cultivate the same alternating colors so far.

Of course, the most important reason why Lou LAN was so expensive was that he had won the koi fish tasting conference from a country with a good life 23 times in a row. Every book about koi fish had been reprinted and printed.

Therefore, this fish was actually a popular fish promoted by a country that had a good life. Its great reputation made it the highest value.

For example, if a street girl participated in a talent show and became a popular group or star, the price would naturally rise, not just 300 or 500 yuan.

What was the difference between his skills now?

Aesthetic +2, exquisite appearance +2, and 2 meters in size, how could it be inferior to the koi fish from a country he lived in?

Attraction to children +2. As long as the children liked him, would his reputation be worse than his country's?

Moreover, the bubbles that his koi fish skill blew out were in the shape of a heart, and he was a fish with a skill.

Qin Lin was curious about what the Koi's love bubble skill looked like.

However, he was not a child. Even if he threw a coin, the koi would not spit it at him.

Therefore, he could only put the koi with this skill in the aquarium and get the children to visit it, then see how it went.

He did as he said.

Qin Lin exited the game and went straight out of the office. Then, he went to the aquarium warehouse and took a few aquarium boxes that he had brought back from Ming city before. He left the villa and went to the warehouse to transport the fish.

Of the 35 fish he caught today, apart from the special type of fish, the skill koi, there were still 10 ornamental fish. Two of them were blood red Dragons of Level 2, and the other eight were all Level 1 ornamental fish.

In other words, he could catch 10 ornamental fish with 35 new fish every day. He just didn't know if the number of two quality and two ornamental fish per day was fixed.

This would have to wait and see.

They arrived at the warehouse.

Qin Lin brought the aquarium into the game as soon as he could. He put the 16 quality 1 ornamental fish, two quality 2 albino yellow Tigers, and two quality 2 blood red Dragons he had caught in the past two days into the aquarium and moved them out of the game.

It took some effort to transport the skill koi, as they were too big.

if he had not eaten two fruits of the tree of power, he would not have been able to put the big koi into the aquarium alone.

After taking the fish out of the game, Qin Lin didn't go back to the villa right away. Instead, he waited for a while before he transported them back.

this was enough time for a time difference. if someone asked, they could just say that they went outside you city to transport the fish.

...

Qin Lin Mountain Villa.

In the aquarium.

The head of the aquarium, Ling Xuan, was also accompanying the middle-aged man on a tour of the aquarium.

"Uncle, how's the fish in our aquarium?" Ling Xuan asked the middle-aged man.

The other party was her uncle, Ling Chong, because she had followed her mother's surname.

Her uncle, Ling Chong, was a very good ornamental fish cultivator.

The boss's high-quality ornamental fish still had the ability to reproduce. She suggested that the boss should breed and cultivate these ornamental fish, and a good trainer was the key.

[Chapter 548 The Magical Koi Fish! The Shop Owner's Connections Are A Little Awesome! 2](#)

Therefore, she directly targeted her uncle.

If this ornamental fish cultivation project could be developed and become a good project, her value as the director would also rise.

After all, the projects she created would definitely be managed by the aquarium, and the income of the aquarium was not only from the tourists 'tickets, but also from the projects.

Ling Chong looked at the ornamental fish and said in agreement, " the fish are all high-quality fish, and high-quality ornamental fish of this scale are rare. The owner of Linlin villa must have a lot of connections to be able to buy so many.

However, Ling Chong suddenly changed the topic, but Xiao Xuan, you really don't have a single fish that is qualified to be the center of the aquarium. Besides, you also know that Xia city's Hongjing aquarium has imported a Blood Red Dragon and is trying to crossbreed it. It's not easy for your uncle to get the opportunity to participate in this kind of rare breeding. I can't give up. Otherwise, I don't know how many trainers are eyeing this opportunity ...

Ling Xuan was a little helpless when she heard this.

In the aquarium industry, she naturally knew about the Blood Red Dragon, which was known by ordinary people as the second most expensive fish in the three IQ taxes.

There were only a few real blood red Dragons, and each one was worth a house. There were only a few in the country.

Only the Grand View aquarium in Xia city, which was one of the top-ranked aquariums in the country, could get one.

Countless ornamental fish cultivators wanted to be involved in the breeding of Blood Dragons, even if it was just cross-breeding other fish.

If his uncle got this opportunity, he would never poach him to the Linlin aquarium again.

An aquarium staff member came over and reported, " curator, the boss has bought 21 ornamental fish. Manager Chen from the security Department is moving them in with some people. He's asking you to make the arrangements.

"I know." Ling Xuan nodded, and then said to Ling Chong, uncle, please wait for a moment. I'll go to the boss 'place to deal with it and then entertain you.

when ling chong saw ling xuan walk out, he followed her out of curiosity to see what was going on.

after all, he was the owner of linlin villa, and he was also curious about what he looked like.

Who didn't know how powerful the owner of Linlin villa was?

Moreover, the evaluation of the owner of Linlin villa on the internet was getting better and better, especially with the continuous expansion of Linlin tomato sauce and Linlin leisure tea into a larger market. The value of Linlin food company in the outside world was also getting higher and higher.

When Ling Xuan arrived at the door, she saw Chen dabei and the security guards carrying in a few aquarium boxes.

The first thing she saw was the two white figures in the first aquarium.

"There are two white Yellow Tigers!" She exclaimed in surprise.

"A White Yellow tiger?" Ling Chong, who had followed them out, was a little surprised. He was attracted over and looked at the aquarium. It's really an albino yellow tiger. Its appearance and color are both top-grade. It's impossible to get one without a market price of 600000. It's a pity that it's too coincidental now. Otherwise, these two albino yellow Tigers might be a male and a female, and we could try to breed them.

The albino yellow tiger was already a super noble among ornamental fish and was very rare, not to mention this one that looked like a high-quality one.

If it wasn't for the temptation of the blood-red Dragon, he would have definitely come to the Linlin aquarium for the two white Yellow Tigers.

That was why it was such a pity. It would have been great if the albino yellow tiger and the blood-red Dragon had not appeared at this time.

This was probably a case of not having your cake and eat it all.

As Ling Chong was thinking, he suddenly saw two blood-red figures in an aquarium behind him, and disbelief immediately appeared on his face. "That's impossible, right? Two blood-red Dragons!"

"? ? ?" even Ling Xuan was attracted by his words, and she looked at the aquarium.

Ling Chong had already rushed forward, and when he saw the scene in the aquarium, he was truly shocked. It's really a blood-red Dragon. This appearance, this appearance, and this fish-scaled Jackal are all far better than the one from the Grand View aquarium in Xia city.

How could he believe that?

Xia city Grand View aquarium was a well-known aquarium in the country. They had spent a lot of money to get a Blood Red Dragon.

Now, the owner of Linlin villa had two blood-red Dragons of such high quality. More importantly, he had also obtained two white Yellow Tigers of very high quality.

This Linlin villa's boss's connections weren't small, but they were too awesome.

It could be said that even the top-ranked aquariums in the country would find it difficult to get these four fish at the same time. It wasn't that they didn't have the money, but that ornamental fish of this level were really rare.

Ling Xuan also walked to the aquarium and looked at the two Blood Dragons in disbelief.

to be honest, this was the first time she had seen two blood-red dragons after being in the aquarium industry for so long.

There were only a few real blood red Dragons in the country.

Yesterday, she had just told the boss that the aquarium was short of the highlight fish, and the boss had brought this kind of fish today. His actions were too fast and too fierce, and it was too shocking.

then, she looked at her shocked uncle with a half-smile, "Aren't these two Blood Dragons pretty?"

"Yes, perfect!" Ling Chong nodded his head decisively. Then, as if recalling something, he immediately said, "Xuan, you said you wanted me to come to the Linlin aquarium to train ornamental fish, right? Then when can I start?"

He didn't care about the blood-red Dragon from Xia city's Grand View aquarium anymore. Wasn't the one in front of him more fragrant? he could have both fish and bear paw.

[Chapter 549 The Magical Koi Fish! The Shop Owner's Connections Are A Bit Awesome! 3](#)

At this moment, Ling Xuan was a little proud, and said with a faint smile, uncle, you know how popular Linlin villa is. You can't just join as you please. I have to report this to the boss. I'm not sure if the boss will agree.

"? ? ? ?" Ling Chong was dumbfounded. "That's not what you said just now. You were clearly looking forward to me quickly getting hired."

At this moment.

qin lin came in with two security guards carrying a large aquarium.

When he saw Ling Xuan, he said, "director Ling, come over and take a look. I got the Aquarium's highlight fish." &Nbsp;

Hearing Qin Lin's words, Ling Xuan immediately said, "Boss, didn't you say four? I've seen the two albinism yellow Tigers and the two blood-red Dragons. They can all be the highlight of the school."

"Not those four," "I'm talking about this koi fish." Qin Lin shook his head and explained, "put it in the display box reserved in the middle!"

In the middle of the aquarium was a reserved exhibition box, which was also an aquarium box. However, compared to the average aquarium box, this exhibition box was as big as a pool.

The aquarium in the booth was also a facility that many aquariums had. It was used to store the most important fish.

Simply put, it was a detached villa, unlike other ornamental fish, which were all placed in water with glass.

Naturally, aquariums that didn't have a need for the most prized fish didn't have such facilities.

After all, fish of that level could not be obtained in any aquarium, and the boss would not take the risk. After all, a simple white Yellow tiger was worth 600000 Yuan, and the others could easily be worth millions.

If something went wrong, it would be harder to cure than a human. If it died, it would be a huge loss. Not many aquariums' owners would take this risk.

Qin Lin's words obviously stunned Ling Xuan and Ling Chong.

After all, the Blood Red Dragon was already the king of the ornamental fish world. The only fish more expensive than the Blood Red Dragon was the Loulan koi fish from a good country.

now that he was saying that two blood red dragons were not qualified to be the highlight of the museum, did he have to get the loulan koi fish from a country that lived a good life?

this was impossible.

however, since the boss said so, ling xuan also walked up curiously. when she saw the skill koi in the aquarium, her eyes immediately revealed a look of disbelief. "This koi fish is so big. Is there such a big koi? Moreover, this pattern is very beautiful!"

ling chong also walked forward curiously, and was equally shocked when he saw the two-meter body of the skill koi. "It's two meters long, right? I remember that the largest koi fish in the world is two meters long, right? But that koi fish died in an earthquake."

In other words, this koi fish might be the largest koi fish in the world.

"Boss, this koi is big, but are you sure you want it to be the highlight of the restaurant?" Although Ling Xuan was surprised, she also said, compared to the Blood Red Dragon, other than the Loulan koi, the other koi fish can't be compared to it even if they are big. At least in terms of price, this koi can't compare to the Blood Red Dragon, right? "

"Not necessarily. The Loulan koi is a celebrity fish, and its value is mostly due to its good life and the country's support," Ling Chong said.

with the size of this koi fish, it's probably the largest in the world. If we use this to hype it up, it'll be one of a kind. Its value might just rise.

"This is?" Qin Lin looked at Ling Chong in surprise. This man was knowledgeable and thought the same as him. Besides, the skill koi fish wasn't just big in size.

It was a koi with skills. How could the Lou LAN koi, which was produced by a country with a good life, compare to it?

When Ling Chong heard Qin Lin's question, he hurriedly said, " mr. qin, i'm ling chong, your daughter's uncle. i'm also an ornamental fish cultivator. "

There was a trace of respect in his tone. After all, the difference in status between him and the other party was too big. He should have a trace of respect, which had nothing to do with age.

Moreover, the other party was his future boss.

Hearing Ling Chong's identity, Qin Lin thought he was a master of ornamental fish cultivation that Ling Xuan had poached. He immediately reached out his hand and said, " master Ling, welcome to Linlin aquarium. We're just getting started, and we're in need of talents to cultivate ornamental fish.

Ling Chong didn't hesitate at all when he heard this, and he immediately went along with the flow, promising, "boss, don't worry. i'll take care of the albinism yellow tiger, the blood-red dragon, and the koi with all my heart. i won't let anything happen to them."

After saying that, he glanced at Ling Xuan smugly, as if saying, "I'm already employed without your asking."

Ling Xuan naturally understood what her uncle meant, and couldn't help but roll her eyes at him.

However, she knew her uncle's skills. Now that he was employed, there wouldn't be any problems with the ornamental fish cultivation plan. It would be best if her uncle could help train more ornamental fish cultivators. It would be a pity if her uncle didn't exploit her.

director Ling, " Qin Lin said, " put all these fish in the water, especially this koi fish. Chen dabei, go and find Yaoyao. Tell her to bring some tourists with their children to the aquarium.

He didn't forget his goal, which was to test the koi fish's skills.

Ling Xuan didn't think too much about the boss looking for a tourist with a child, and she ordered her people to get to work.

After all, the children in the aquarium group was the largest group. She had no idea how amazing the koi was.

Chen dabei did not think too much about it. He had always done whatever his boss told him to do. He immediately left the aquarium to look for Gao Yaoyao.

[Chapter 550 This Koi Fish Is Too Awesome! Little Qin Is Forced To Open His Business!](#)

Chen dabei quickly reached Gao Yaoyao's office.

As a manager, both of them had their own security Manager and service Manager offices.

The moment Chen dabei saw Gao Yaoyao, he said, " Gao, the boss wants you to find some tourists with children to go to the aquarium.

"Is the aquarium about to open?" Gao Yaoyao could guess the reason after hearing Chen dabei's words.

This was all experience.

After all, this was not the first time he had done something like this.

Chen dabei nodded. I think so. The boss brought some more fish over. It seems like those fish are very precious. The head of the aquarium was so excited to see those fish that he almost jumped up.

"Okay, I'll find someone immediately." gao yaoyao said as she got up and went to the multimedia department.

Linlin Manor had a Broadcasting System that could broadcast the recorded sound of the trees to all parts of the manor and Ranch. Naturally, if anything happened, it could also be manually broadcasted to inform the others.

Previously, there had been Tiger Mothers who had lost their children, and they had found them through manual broadcast notifications.

When Gao Yaoyao arrived at the multimedia department, she went straight to Lin Lanzi's office. "Sister LAN Zi, I need you to help broadcast a notice. The boss needs some tourists with their children. Tell them that we have prepared a special surprise for their children. Parents with children can go to the hall to register."

"Yes, I'll arrange for someone to do it: " Lin Lanzi said with: smile:

As she spoke, she called for the staff in charge of broadcasting in the multimedia department.

Not long after, an announcement could be heard throughout the Linlin villa and Linlin Ranch, respected tourists, Hello. Today, our Linlin villa has a surprise for a child. Tourists who are bringing their children can now go to the main hall to register.

If it was a surprise from another scenic spot, the tourists might not be interested, but many people from Linlin villa would be interested.

Everyone knew that Linlin Manor must be having some sort of event.

In Linlin Manor, no matter if it was a big event or a small one, according to past experience, it was always very attractive.

Therefore, many tourists who had children with them would bring their children to the main hall at the first moment.

Those who could bring their children here to play naturally valued their children quite a lot. If there was such a small surprise, they would naturally be willing to go and take a look.

Gao Yaoyao had already arrived at the main hall from the media department. She was waiting for the visitors with the children.

.....

in the linlin aquarium.

The school of fish swayed. 2000 quality 1 ornamental fish. Although it wasn't a lot and could be replenished slowly, there were still too few types of aquatic animals. They still needed to replenish some other animals later.

The two Grade 2 white Yellow Tigers and two blood Arowana were placed in the water inside the isolation glass.

The area where the four fish were located was also in the sub-central area of the aquarium, and there was a separate area.

A fish worth hundreds of thousands or millions couldn't be put together with a school of fish worth thousands or tens of thousands.

This was like putting an internationally renowned Heavenly Queen with a group of talent show players. It was really not appropriate.

the skill koi was also placed in the super large aquarium on the display.

The two-meter long body was already swimming briskly in the water. The rippling water and the swaying fishtail looked quite elegant.

Qin Lin and Ling Xuan were standing outside the glass partition. He took out a coin and tried to throw it into the feeding trough.

The feeding trough was a very magical facility because the exhibition box was very high and filled with water. There was an additional gap in the middle, so the water wouldn't overflow from there and food could be put in.

For the bad students, this was really high-tech. For the top students, this was just a negative pressure principle, just high school physics knowledge.

As for the specific principle of negative pressure, Qin Lin had almost forgotten it.

He had already returned his University knowledge to the school, let alone his high school knowledge.

Because of the special skill of the koi, one of the feeding slots had to be changed into an interactive coin slot.

It was a pity that the koi fish ignored his coin and let it fall into the water.

Sure enough, it wasn't the child who couldn't use the coin.

The koi had no eyesight. He was the boss, and if they treated him like a child, would it kill them to pick up the coin and blow a bubble for him?

This fish was proud of its status and had no emotional intelligence at all.

"Boss, what's the name of this koi fish?" Ling Xuan looked at the skill koi and asked.

Since he wanted to be the highlight of the restaurant, he needed to have a loud name.

Even the two albinism yellow Tigers and the two blood-red Dragons were the same.

"Let's call it bubble!" Qin Lin gave a random name. After all, this fish could spit bubbles, so it was reasonable to call it bubble.

"Then why is it called bubble?" Ling Xuan asked curiously. It wasn't that she was asking her boss questions, but that it would be better to write down the reason for the name when it was time to make the fish Card introduction.

Many fish were named because of their own characteristics or some special meaning, which could be used as a publicity point for tourists.

"Keep it a secret for now. You'll know when the visitors arrive." Qin Lin also kept her in suspense, and then asked her, chief Ling, can you get someone to prepare some coins? also, what are they normally used to disinfect ornamental fish? "

He remembered something. The coin had been touched by so many people and was very dirty. There were too many bacteria on it.

If he threw too much of it into the water, it would definitely affect the skill of the koi, so he had to disinfect it first.
