

## The Growth 103

Chapter 103 - 6: Mountain and Sea MinAseerpentg She (1/5)

In the eyes of outsiders, Bone Chant is a veritable master of "Good Seed Cultivation".

He personally led the cultivation of a new type of Bone Beast and established a standard model specification for the bones generated by Bone Beasts.

Which bones are suitable for building walls...

Which bones are suitable for replacing the bodies of Skeletons...

Which bones are suitable for cultivating a new generation of Bone Beasts...

Which bones are suitable for nurturing and helping the newborn Skeletons grow...

From shape to color, and then to hardness and adaptability, Bone Chant established a standard for each bone and then selected bones of the same type for uniform distribution according to these standards.

This set of standards was applicable to almost all bones, allowing the Skeletons for the first time to choose their required bones based on intuitive data rather than feelings.

Most importantly, through these standards, which have been popularized among the Skeletons, Bone Chant can even make Bone Beasts grow bones with specific structures.

From Li Hao's perspective, this is essentially a bone version of a 3D printer.

If the Skeletons were to illuminate technologies like gunpowder, springs, and bolts, it would not be impossible to have a Bone Beast directly grow into a firearm.

Of course, even though the Skeletons haven't illuminated humanity's technology tree, they have a habit of taming Explosive Insects.

Since the death of Tyrant Pi, the technique of taming Explosive Insects has gradually spread among the Skeletons and has now become another branch of animal husbandry.

Although it is not as important as Bone Beasts, the Zhiku of the Skeletons is already considering further advancing this technology.

Bone Chant is one of the main persons responsible for this technological advancement.

As for why he is only one of the main responsible persons and not the sole responsible person?

This is certainly not because of insufficient ability, but because his identity is too awkward.

Clearly bestowed with the surname "Bone".

Yet Bone Chant is not of the Skeletons but an extremely peculiar existence among the Hundred Races of Mountains and Seas—a Minaseerpentg She.

.....

A Minaseerpentg She is a serpent with four wings and can emit sounds like bells and chimes.

Before it sprouted wisdom, Minaseerpentg She was a predator at the top of the food chain.

They soared between heaven and earth, tussling with mountain eagles and battling tigers, almost all animals' natural enemies.

Until one day, the first Minaseerpentg She with wisdom was born.

As it became the lord of the mountains and forests, this Minaseerpentg She became perplexed by its uniqueness.

Then it discovered the Skeletons, those beings who seemed to share its intelligence but were vastly different in form.

Unfortunately, the Skeletons at that time were in the initial expansion stage, with a strong stress response.

The moment they discovered the Minaseerpentg She, they considered it a member of the Hundred Races of Mountains and Seas and engaged in combat.

The outcome was predictable, that group of Skeletons was inevitably annihilated, and the Minaseerpentg She thus became aware of the war between the Skeletons and the Hundred Races of Mountains and Seas.

With anger, curiosity, and a hint of hope...

Minaseerpentg She officially began its rise as a species and, in the process, discovered the existence of Hua She.

Or more precisely, Hua She noticed this unique group of Minaseerpentg She.

As an Ancient God from an Exotic Realm, Hua She's original form was a Winged Serpent—a flying serpent with wings.

Although Minaseerpentg She didn't grow feathers but rather reptilian-like flesh wings.

Nevertheless, the similarity was undeniable, and Hua She's affection eventually led to it becoming an object of belief for the Minaseerpentg She.

Whether or not this is a step by Hua She to prepare for Ascension to Divinity.

In terms of results, it indeed became a tremendous opportunity for the Minaseerpentg She race.

Under Hua She's protection and guidance, more and more wise individuals were born among the Minaseerpentg She, eventually making them a member of the Hundred Races of Mountains and Seas.

With a strong individual strength, an ecological niche at the top of the food chain, and intellect surpassing ordinary creatures...

Even among the Hundred Races of Mountains and Seas, Minaseerpentg She is quite a special existence.

Among them, Bone Chant, who left the Minaseerpentg She tribe a hundred years ago and voluntarily went to White Bone City, is the most special.

Although it is a Minaseerpentg She, it is very familiar with the various technologies and systems of the Skeleton race.

With Bone Chant's help, the Skeleton race, originally stagnating in development, once again sparked a leap in civilization.

First was the development of the region.

Leveraging its ability to fly in the sky, Bone Chant helped the Skeleton race re-plan and expand cities and roads.

Bypassing the complex terrain of mountains and rivers and remodeling rivers by building artificial canals...

This was the first time the Skeletons realized they could change nature in such a way.

From passively accepting environmental changes to actively making the environment adapt to their needs.

This is the most convincing evidence of civilization entering a new stage.

If left to the Skeletons to develop on their own, in their state of desirelessness, it would take at least a few hundred years to achieve this.

Next was the unification of measurement standards.

Even in flourishing human civilizations, unified measurement standards can be recorded as a great achievement in history.

Not to mention, for the Skeletons who were just emerging from the primitive tribe phase, they weren't even aware of what unifying measurement standards meant.

The only certain thing is that life among the Skeletons did indeed become much easier once they had a unified measurement system.

Trading no longer required quarrels, curses, or even fights...

Descriptions of distance and places no longer needed various vague adjectives...

Even large projects like building city walls and excavating canals became simple and convenient...

Thanks to this, White Bone City, as a trading center for members of the Hundred Races, far exceeded the population capacity that a primitive civilization could support.

Every day, tens of thousands of people come and go within it...

Every day, a huge amount of goods are traded in the city...

To tell the truth, the current civilization stage presented by the Skeletons, or the Hundred Races of Mountains and Seas, is no longer something Li Hao can understand by referencing human civilization.

Institutions, technology, population, resources...

In all aspects, this unique civilization appears to be so incredible.

Clearly, they have not yet moved beyond reliance on natural resources, yet they have prematurely obtained bone versions of 3D printing technology.

As for population...

The total number of wise individuals among the Skeletons and all members of the Hundred Races of Mountains and Seas does not exceed one million.

On Earth, this is at most the population of a large city during the peak of a feudal dynasty.

As for the institution?

Aside from the "Zhiku members" responsible for directing civilization's progress...

It is truly difficult to identify a ruling class in the explicitly divided Skeletons.

After experiencing the eras of the Virtuous King, the Tyrant, and the Prophet, the vast majority of Skeletons have understood their needs.

And this is the fundamental reason why Bone Chant can lead the Skeletons, and even the entire Hundred Races Alliance, with the identity of a "Minaseerpentg She" who is an outsider.
