

The Growth 267

Chapter 267 3: A Genius Is a Genius Everywhere (3/3)

"All these model artifacts... were made by my brother?"

Staring in astonishment at the wall cabinet filled with all sorts of model artifacts and figurines, Li Yun had never so clearly realized Li Hao's genius as she did now.

Even a complete outsider could see the precision and detail of those model artifacts.

Being somewhat of a tomboy herself, Li Yun's eyes were immediately drawn to the manually transformable Superpower Warrior.

In addition, there was a brand new "mechanical arm" on the workbench not far away, which also looked like it was 3D printed.

"Haha, well, you could say that..."

"The boss provided the design blueprints and the materials, but I was responsible for assembling and painting them."

Muttering softly, Xiang Chong seemed evidently lacking confidence when saying this.

After all, he had left most of the difficult tasks to Li Hao, and the finishing work he was responsible for hardly counted as anything more than odd jobs.

"Even so, you're really amazing!"

Li Yun was speaking the truth; she had never seen such a comprehensive and trendy store before.

If not guided by Li Hao, Li Yun would never have believed that such a store existed in the city she lived in.

"So, according to you, does that mean that as long as there are blueprints, anything can be printed?"

Faced with Li Yun's question, Xiang Chong instinctively wanted to boast.

But after glancing at the smiling Li Hao not far away, he decided to speak the truth.

"Well, not everything can be printed. For regular plastic and resin models, my shop's printers can handle them without a problem."

"But for somewhat larger parts, these printers would struggle."

"And the hardness of the models and parts printed by the printer is also a bit lacking..."

Though they had just met, Xiang Chong and Li Yun were already chatting pleasantly.

This was partly thanks to Xiang Chong's nature to chat with anyone he met.

But also because they shared common interests.

Seeing this scene, Li Hao raised an eyebrow slightly, but didn't say much and instead walked directly towards the workbench Xiang Chong had specially prepared for him.

"Huh?"

It wasn't until Li Hao entered the workbench that he realized Xiang Chong had indeed put a lot of effort into it.

In addition to several industrial-grade 3D printers, that guy had also acquired a small CNC machine.

You have to know, CNC machines are different from 3D printers; they can directly shape metal materials.

At this stage, where 3D metal printers haven't entered the consumer market and are still theoretical products, a complete CNC machine is practically a dream device for most engineering students.

Of course, even with a CNC machine around, Li Hao still planned to DIY his own 3D metal printer as per his original plan.

After all, the principle of a 3D metal printer is not complex, mainly involving using high-temperature lasers to shape metal powders to create the desired structure and parts.

Compared to CNC machines, 3D metal printers have many advantages when it comes to printing small parts.

It's no exaggeration to say, with these complete sets of equipment, an ordinary person could directly download blueprints online to print a complete firearm.

Let alone someone like Li Hao, who could independently handle the entire process of designing, modeling, shaping, and assembling.

As for why Li Hao got into this field?

The reason is quite simple, it was purely out of a boy's interest.

In fact, if it weren't for becoming the Creator accidentally, Li Hao's future university choices and career direction would most likely develop in this direction.

After becoming the Creator, Li Hao's interest in this area has only increased.

Especially after encountering so much advanced technology and artifacts, Li Hao became curious whether he could recreate them in real life.

Not by using his ability as the Creator to forcibly pull these artifacts into this dimension.

But by using the existing materials and technology on Earth to reset and reproduce those technological or mechanical products.

Considering the differences between worlds, this is quite a challenging task.

Li Hao didn't even dare to be sure if he could find the corresponding materials on Earth.

"Fortunately, no matter how world rules change, mathematical logic remains consistent..."

"As for the laws of physics?"

"As long as it doesn't involve dimensions, the most fundamental laws of physics shouldn't vary too much."

Sitting down onto the workbench, Li Hao skillfully opened the design blueprints he had sent to Xiang Chong last night.

It was a set of design blueprints for a 3D metal printer, designed by Li Hao through online open-source data and his own ideas, creating a unique 3D metal printer.

From the basic model to the circuit layout and the operating program, all steps and processes were completed independently by Li Hao.

Thus, whether this 3D metal printer can be successfully created also symbolizes whether Li Hao is equally outstanding as a mortal beyond being the Creator.

.....

"Has he... always been like this?"

Standing outside the workbench, Li Yun, who had unknowingly finished touring the shop, asked in a low voice.

This was a side of Li Hao that Li Yun had never seen before, a side he never showed in front of family.

The skillful movements, the calm aura...

For a moment, Li Yun seemed to see a truly versatile talent.

Not only excelling in studies and ranking at the top in all subjects, but also impressively skilled in hands-on abilities.

"Of course!"

"In our little circle, who doesn't know how amazing the boss is?"

Xiang Chong had already learned from the previous conversation about Li Hao's basic family situation from Li Yun.

So while surprised by how obedient and gentle someone of Li Hao's caliber appeared in front of his family, Xiang Chong spoke with pride.

"It's said that as early as a year ago, a professor from a top university invited the boss to collaborate on research together."

"Unfortunately, the boss didn't agree at the time and then disappeared for a whole year."

"It wasn't until recently that I found out the boss wasn't silent all year, he was fully preparing for the college entrance exams."

Hearing how highly Xiang Chong admired Li Hao, Li Yun felt an inexplicable sense of pride arise in her heart.

This was her brother, a genius outstanding in every aspect.

"In that case, I'm relieved."

Letting out a long sigh, Li Yun smiled sincerely.

"For the next two months, I'll be relying on you to take care of my little brother. If anything comes up, just give me a call."
