

Uzumaki 83

Chapter 83 - Housing Problem

"The house doesn't need to be so good, it just need to be sheltered from the cold wind and rain, and it must be sufficient."

There are too few Earth Attribute Ninja of the Uzumaki Clan now, and the control ability is no good enough, so it is impossible to make a good exquisite house at all

Wood Release is also good in building House, but the main job of Third Elder is making food, and making food require huge amount of energy, he can't stop and help to build house when making house is easier than making food.

The Senju also help a lot making house, but because of poor control, the house they made is all poor standard.

The roof is leaking, the floor is full of mud, there's no window, the door is so huge, and other problem can be seen.

And Wood Release is not permanent, when they stop putting chakra on the Wood, the Wood start to rot.

Not like Hashirama Wood Release is that can stay for so many years, the Wood Release of Senju and Third Elder can boost the growth of plant.

Without any choice, he can only find Shinobi who can use Earth and Wind Release.

"Use Wind Release to cut wood, Earth Release to build the foundation and eall of the house."

Xin pointed the geographic map of th Uzumaki Kingdom and said." In this open space, we can build here."

"You only need to build a model that is draw in the plan, use your chakra to press the soil to make the wall and pillar stronger ,x

"And build as many as you can.,x

Xin said seriously." We must bild enough house while the snow is still not plenty.'

Once the snow start to fall heavy, it will be quite troublesome to build a house.

"Yes!"

"St the same time, give the finish house to all refugees, separate them apart from those who is sick, and weak from healthy and still good."

"We must prevent any illness spreading in the camp, one of the major cause of death in this kind of situation is the illness that spread around when someone I'll stay to the other health one."

"And also, the relief only works until three days, after that they need to work to get food and shelter, remind them."

"Whether it is a Ninja it a Civilian, only those work eat."

Now it's an emergency, there is absolutely no possible of accident right now, and if there is something to do, they need to do it calmly so everyone will think everything is under control.

"And also before a forgot old, children below 13, disable, pregnant, etc... is excluded to work, they will get relief until we find suitable job for them."

Xin is not fool or a saint, he knows the strength and weakness of each people, and he know that young and old people can work heavy because of the age and physical condition, pushing them to do hard work will only cause trouble for them.

"Because the School is still constructed, we can start recruiting students, I already prepared everything they need to know and way to enter the school, just ask Great Elder and my father for further explanation."

"That's all, we will do this until the refugees stop coming, please bear with me guys."

"Yes!"

....

The problem in building materials is not huge problem, Xin have some knowledge building strong house and making cement.

Cement is combination of hearted mix ground limestone, and clay, bake it on stove then pulverized the concoction into fine powder.

It's the prehistoric type of cement but the application is same as modern cement, with brick, and sand, Xin can create a modern looking house that is strong toevey type of situation.

In Ninja World, there's no stolen structure except to the Daimyo Palace, and the place who know how to use Earth Style.

Even Konoha use Wood to their own home, and mud and brick to create wall, not single house made from pure stone.

Maybe because of war, the progressive of this world is slow, almost non-existent to get he point that fifty years later, only then game boy created.
