

Wizard 109

Chapter 109: Advanced Waves! (1)

Peak knight.

In the entire kingdom, it was an extremely rare existence.

"With my strength as a peak knight, the Top-tier Defense of a level 7 Black

Snake, the Advanced Speed of a level 6 Siren Breathing Technique, the

Advanced Strength of level 6 Giant Rhinoceros, the level 6 Golden Cross Slash, and the Frost Giant Armor, even if I don't use Frost Giant's Sigh, I should be able to fight against Magic Shark at his peak."

Of course, this was only Levi's assumption. He would use Frost Giant's Sigh in actual combat. He would be a fool not to use a spell.

Other than the seventh level of the Black Snake Breathing Technique during this period, the other three were still in the same state.

The Golden Cross Slash that knight Fred had taught him had reached level 6, and the Intermediate Ripple had become Advanced Waves.

Next up was the most difficult skill, Revolving Force. Levi was not in a hurry.

The Intermediate Ripple alone, coupled with mithril-fused Frostmourne, could achieve the effect of cutting through iron. The Advanced Waves could even cut through iron like mud!

Now, unless his opponents' armor were mixed with mithril, they would not be protected effectively.

Levi guessed that even the Dawn Swordsman Sir Fred's Ripple Force realm should not be comparable to his current level.

On the path of the Golden Cross Slash, there was a high chance that only the creator had gone further than him.

At the same time, Levi's Blood Whale Breathing Technique had reached level 4, and a Special Effect was born: Beginner Endurance.

However, with Levi's strength and physical fitness as a peak knight, the basic endurance did not add much to him, so he had to continue practicing the breathing technique.

This was an excellent breathing technique. It should not be a problem for him to reach level 7, but it was hard to say for level 8.

Among all Levi's breathing techniques, he was sure that only the Giant Breathing Technique and the Black Snake Breathing Technique could reach level 8. His father and the grand knight of the Mellon family verified these two breathing techniques. They were likely to be the upper limit of the excellent breathing technique.

Above that, it should be the perfect-grade breathing technique.

Although the Beginner Endurance of the Blood Whale Breathing Technique did not give Levi much of a boost, what he was looking forward to the most was not this Special Effect but another magical aspect of the Blood Whale Breathing

Technique.

Whale sac.

After reaching the fourth level, his body also developed this new organ.

He could go a month without eating with his current peak knight realm once his whale sac was filled, just like a camel. This saved much time for Levi to cultivate the breathing technique.

Time was like the water in a sponge; it was squeezed out.

For a master of time management like Levi, the ultimate Liver Emperor, every little bit of time saved would mean he could create a shallow breathing technique.

Of course, to enjoy delicious food, Levi would still eat to satisfy his appetite.

The Siren Breathing Technique had also fused with the three speed-type breathing techniques that Levi had learned. He had successfully broken through the limit and could continue to gain experience points.

Levi's strength would increase every month, which was impossible for ordinary fighters who might need years or even decades to break through. However, with the proficiency panel, all of this happened naturally.

Although Fred was no longer around, Levi knew he was stronger than before with the Magic Shark as his experimental subject.

Without using his trump cards like the seals and the Frost Giant's Sigh, Levi could suppress Magic Shark from a draw to a stable one. His strength was improving at a visible rate.

Now, he still had a lot of Black Snake Secret Medicine. Levi was confident that he could become a grand knight by the end of next year before he turned 21.

The only thing that Levi was not satisfied with was the Giant Breathing Technique and the Vortex Beast Breathing Technique.

Because he did not have their secret medicines and out of consideration for efficiency, Levi did not cultivate these two excellent-grade breathing techniques much. Up until now, he had not even reached level 3.

It was not that he did not look for their secret medicines, but he had been in the Shining Tavern for so long, but there was still no news about the Turbellarian Egg and the Frost Ape.

On the other hand, after Levi changed the bounty's name to the "Frost Heart" that everyone easily knew, he obtained a few more Cores of the Undead.

Levi also saw hope in upgrading Seal of Hell to level 2.

According to the Spirit Exorcism Manual, if the Seal of Hell were at level 2, the living dead that could be revived and controlled simultaneously would multiply. According to Constantine's description, his ancestor could control five living dead simultaneously at his peak. Therefore, Levi guessed that the limit of this skill should be level 5 or above.

"If I can control five living dead grand knights simultaneously, it will be something worth looking forward to," Levi fantasized.

Even if the living dead weren't as strong as when they were alive, they had the advantage in numbers. In this era, they would still kill anyone who stood in their way. They could be used as laborers if they weren't strong enough.

A level 5 Seal of Hell was not a fantasy. Now that the disaster of the Snow Demons had deepened, more Cores of the Undead would gradually flow from the Evernight Kingdom to the northern Icewind City. Reaching the fifth level would not be difficult as long as there were enough Cores.

As for the remaining two seals...

The Flame Seal had recently advanced to level 2, and its orange-red flames had been upgraded to yellow-white flames. Its range had also increased from two meters to three meters. Its power had increased significantly..
