

Wizard 242

Chapter 242: Demigod, Legendary, God-Like, Klein! (7)

Therefore, most of the wands, even the best ones, were only in the category of Quasi-Wizard tools and were still not considered official wizard tools.

In terms of value, these wands were not as precious as Levi's Pot of Equal Value. Many official wizards did not even have official wizard tools, let alone apprentice wizards.

But no matter what, he couldn't afford it.

He was poor. He had ten thousand taels of gold, but he could only let them accumulate dust.

Levi shook his head and left the shop with a sigh.

Now that he only had 5 points left, it was better to use them sparingly.

He didn't need the wand for now. After all, he had only mastered one Zero-Ring Cantrip, Insect Controlling Technique.

The spells from the School of Insects didn't really require a wand.

After returning to his residence, Levi took out the Klein Crystal.

This was an item required for wizards' cultivation. It cost 10 Aether Stones outside, but in the organization, it only cost 5 points. This was the benefit of joining the organization.

Levi placed his hand on the Klein Crystal ball.

He entered a state of meditation.

Above the Klein Crystal ball, symbols began to appear.

"Spiritual Force: 4"

"Spell Power: 15"

Looking at the numbers, Levi could not help but frown.

No wonder the Tower Master said that his spiritual power was fine, but his spell power was not enough.

The threshold spiritual force for intermediate apprentice wizards was 5 points, and he was already very close.

According to the general education teacher, the normal spiritual force value of 4 points should be 40, which meant that 1 point of spiritual force represented 10 points of spell power.

The so-called spell power was a product of a wizard's spiritual force cultivation.

If spiritual force was a bucket, then spell power was the water in the bucket.

In the early days, it was said that wizards needed to consume spiritual force to cast spells, including what Tuten had introduced to Levi before. However, after learning in the general education class, Levi knew that this theory had been eliminated.

Wizards were a group that pursued innovation and truth. They would not blindly worship the past and believed that the present was better than the past.

The truth could be infinitely close, but there was no way to truly grasp it. Therefore, the theoretical changes in the wizards' world were also constantly evolving.

Tuten was old history. It was not his fault. After all, he had stayed in the human world for so long, and he had no contact with wizards.

According to the latest research theory of a legendary wizard 300 years ago, it was more accurate to say that casting spells consumed spell power. The relationship between spell power and spiritual force was related.

The higher the spiritual force, the stronger the spell power. Spiritual force determined spell power.

"No wonder I became weak when I use the Insect Controlling Technique a few times because I did not have enough spell power."

Levi recalled the process of practicing the Insect Controlling Technique and came to a realization.

"The Insect Controlling Technique is a simple three-structure spell model. Each casting requires three points of spell power. With my current level of spell power, I can only cast it five times. After that, I need to rest and meditate for a long time to recover my spell power. My upper limit of spell power is too low. I

Need to think of a way to increase my upper limit of spell power. This is the top priority."

Levi put away the Klein Crystal.

So far, there were only two ways to increase the upper limit of one's spell power.

The first was to constantly increase the upper limit of one's spiritual force. This was the most important thing. However, because everyone's talent was different and their physiques were different, the upper limit of one's spiritual force would often differ greatly.

The upper limit of a Children of the Elements' spell power would be far higher than a Children of Chaos' if they had the same spell power and realm.

With the help of the proficiency panel, Levi's cultivation of Meditation Art improved, so his spiritual force also increased very quickly. Although it was still not as good as some of the Children of the Elements, at least he had a dual-element affinity, far surpassing that of ordinary Children of Chaos.

However, as his spiritual force increased rapidly, Levi's upper limit of spell power also increased.

At this time, there was only one way to increase the upper limit of his spell power in the short term, and that was to take potions.

The potion that increased the upper limit of spell power was sold in the potion shop in White Sail Alley. It was called Green Elf's Tears.

However, Levi took a look. A bottle of low-grade [Green Elf's Tears] that could increase one spell power point cost a total of two points. If Levi wanted to increase his maximum spell power to the level that his spiritual force should have, which was 1+0 points, he would need 50 points.

This made Levi feel like he was about to lose his balance. In the Gray Tower, any important cultivation resources required points.

Therefore, he had to think of a way to earn some points.

Levi did not go to class in the afternoon. The classes in the afternoon were all advanced spell classes. With his current points, he could not exchange for a new spell model. Insect Controlling Technique was not taught here, so there was no need for him to go to class.

After practicing the breathing technique and Meditation Art, he went to the hall on the first floor of the White Tower to see if there were any missions to

Earn points..
