

Wizard 264

Chapter 264: Extreme Ostrich Mountain, Maximum Limit Dragon's Might, and Dragon Affinity! (3)

Hence, Levi was still far from becoming an official wizard.

After learning the Night Crow Meditation Art, Levi had completed the spell constitution of the School of Death's Withering Ray.

To cast the Withering Ray, it required something called the Eye of the Gray Snake.

This kind of casting material was not sold in White Sail Alley.

This was because this was a casting material that only the School of Death would use.

This made Levi realize how difficult it was to learn spells from other schools.

This was also why wizards were divided into schools and gathered together.

In the territory of the Ocean School of Thought, finding the casting materials of the School of Death was a difficult problem in itself.

Of course, it could still be found in the Realm of Azure Cloud.

However, it was not that easy.

Levi reckoned that it would be sold in Blacksail Wizard Market.

Fortunately, there were some materials for casting Withering Ray in the storage bags of the few wizards. It was enough for Levi to reach level 2.

Therefore, after upgrading the Withering Ray to level 2, Levi could only temporarily stop the cultivation of this spell.

He switched to Water Arrow and Tidal Grasp.

Of the two spells, Water Arrow did not require casting materials, and it has a low difficulty. It was not even as difficult as Levi's first spell, Insect Controlling Technique, which only had 30 nodes in total.

Therefore, Levi quickly constructed the spell constitution and had already cultivated his Water Arrow to level 2.

As for Tidal Grasp, it required a type of coral rock produced at the bottom of the sea as a casting material. It was sold in White Sail Alley, and it was not expensive.

However, the difficulty of this cantrip was slightly higher, and Levi was still at level 1.

As for the Insect Controlling Technique and the Flower Fairy's Dew, these two cantrips...

After the cultivation reached level 4, it was already at its limit.

There were no special effects after these two cantrips reached their limits.

With the Insect Controlling Technique at the limit of level 4, Levi could control 1,000 Saint Scorpions.

However, after years of natural breeding, there were only about 300 Saint Scorpions in his Bug House.

The breeding cycle of the Saint Scorpion was too long, and some of the damn adults would even eat their own larvae. Levi studied the Saint Insect Defending Technique and found out that the larvae needed to be fed separately.

However, Levi only had one Bug House, so he temporarily kept the larvae in a small room on the ninth floor. He usually bought some sea beast meat from the White Tower Town to feed them.

Although the technique said that Saint Scorpions could evolve faster by eating humans, Levi naturally would not become a true demon and start a massacre just for this.

He would not be able to survive more than a month in that kind of wizard world.

Therefore, he always chose to feed the meat of the sea beasts. It was good enough as their meat was rich in nutrients.

All in all, Without the guidance of the school or Insects, Levi found it difficult to walk on this path and could only fumble around on his own.

The effect of the Flower Fairy's Dew, which was at the limit of level 4, was that the range of watering was a little larger, and the nutrients in the dew were also slightly more. Other than that, there were no qualitative changes. After all, this was just a cantrip. It was already quite good to have such an effect.

Levi was still in charge of the small garden.

Apart from him, the apprentice wizards of the Gray Tower did not have the ability to take care of those precious herbs as well as Levi.

The reason why Levi didn't give up on the small garden quest was to repay Ms. Marlene's kindness. These herbs were all Ms. Marlene's painstaking efforts and many of them were precious raw materials for first-circle potions. Naturally, he couldn't give them up.

Moreover, after Flower Fairy's Dew reached level 4, Levi would not have to spend too much time in the small garden.

For the past six months, he had never left the island or sold medicine to earn money.

After all, just the 500 points awarded by the Tower Master were enough for Levi to spend for a long time.

Life was so unpredictable.

Just a moment ago, Levi was still worrying about the points, and he had come up with all sorts of money-making plans.

However, the next moment, Levi became rich.

Of course, the principle of making money from pharmaceutical production would not waver.

It was only a coincidence that he received 500 points for free.

His future consumption would only increase.

Therefore, Levi was still practicing his pharmacology.

It was estimated that by the end of the year, his Pharmacy skill would be able to reach level 6.

That was the standard of a high-level pharmacy skill.

The success rate of making normal potions such as blue potions and red potions was basically 80% or 90%.

Once he became an official First-Circle Pharmacist, the success rate of these apprentice-level potions would basically be 100%.

Levi did not have many classes during this period of time, so he had a lot of time to cultivate.

Now that Ms. Marlene was in seclusion, the advanced General Education class was temporarily suspended. Levi had already mastered all the basic General Education classes, and he basically finished them with full marks.

He had long mastered the common language of wizards. With this language, he could communicate with other wizards in the Realm of the Unbelievers without hindrance.

As far as Levi knew, due to the influence of some powerful wizard who explored other planes, the common language of wizards had already begun to spread in some places in the Multidimensional Plane.

This was called the cultural invasion before the arrival of the army.

During this period of time, Levi would also attend spell and meditation classes.

After all, he had always been cultivating by himself. It was inevitable that he would make some mistakes and not be able to keep up with the times.

The current Levi had basically mastered all of the spell and meditation theories at the apprentice stage.

In the future, he wouldn't need to attend the basic classes anymore..
