

Wizard 265

Chapter 265: Extreme Ostrich Mountain, Maximum Limit Dragon's Might, and Dragon Affinity! (4)

He would be able to save time to do his cultivation.

Furthermore, with his relationship with Ms. Marlene, he could consult her if he has any difficult questions.

One-on-one teaching was more efficient.

Among the four great seals that Levi had obtained in the early days, the Seal of Hell was already at its maximum, but there was no suitable living dead for Levi to command.

In the Gray Tower, it was not convenient for Levi to use the living dead, so this seal was temporarily useless.

Seal of Flame was also cultivated to level 4.

The flame had evolved into purple flames , and its temperature was increasing. The range of the flame flow had also reached seven meters.

The power of the current Seal of Flame was no less than the cantrip of the Burning School of Thought mastered by high-level apprentice wizards. When he advanced it to level 5, it would probably not be

much weaker than the first-ring Burning Palm. At that time, it would be equivalent to Levi mastering a First-Ring Spell in advance.

As for the Seal of Dragon Might, it was the maximum when it was cultivated to level 3.

The level 3 Dragon's Might dealt even more damage to the evil spirits. Unfortunately, no evil spirits dared to appear in the Gray Tower, so Levi could not test it out.

However, just the side effect of the level 3 Dragon's Might, the spiritual assault, was enough to make the enemy suffer.

Apart from that, the level 3 Dragon's Might also gave birth to a special effect called Dragon Affinity.

This special effect could increase Levi's affinity with dragons and any dragon bloodline creatures, including purebloods, sub-dragons, hybrids, and so on.

In short, the biggest effect of this special effect was that Levi could now touch the head of the white snake Jorman Gund, a dragon hybrid.

This made Levi guess that if Senior Sister Winnie could touch the white snake's head, could it be that she also had the talent of Dragon Affinity?

The final Seal of Protection was still at level 2.

It was also the skill that Levi planned to focus on upgrading this time.

As long as he raised this seal to level 3, he could reach the maximum.

Levi looked forward to the level 3 Seal of Protection's special effect.

From the current pattern, Levi guessed that this special effect was most likely an affinity-type special effect.

The Seal of Hell has an affinity with hell creatures, while the Seal of Dragon has an affinity with dragons.

He did not know what kind of affinity the Seal of Protection had, but it was most likely related to the Earth School of Thought.

In short, Levi was more interested in the passive special effect of seals. This was something that could be used in the later stages of his life. The seal itself would definitely be eliminated as Levi's strength increased.

After leaving the ninth-story Gray Tower, he stood up and went to White Sail Alley.

Some time ago, Levi had asked the owner of the material store from the alley to purchase a large piece of Pyroxene from the Blacksail Wizard Market.

Pyroxene was relatively rare in the human world, but it was still rather abundant in the world of wizards.

It was difficult to find it in the Realm of Azure Cloud.

Levi was quite the influence, and he had the ability to make money.

After giving the shop owner a few Aether Stones as a tip, the boss used his connections to get a piece from the Blacksail Wizard Market.

Today, Levi was there to take the goods.

He arrived at the materials store.

The boss was a fat man called Manla.

He was also an apprentice wizard and has a pretty good talent, which was triple affinity.

He was once an influential figure in the Gray Tower, and the Tower Master had high hopes for him. He believed that he had the hope of breaking through to an official wizard.

However, because he had fought with the apprentices of the Undead Ship when he was young, his spiritual force had been severely damaged, making it impossible for him to advance to an official wizard. He had decided to retire to help with the shop management for the tower and also to earn some points. "Hey, look who's here. Our legendary knight, the great hero Levi!"

The boss joked.

Levi smiled and asked, "Has the Pyroxene arrived?"

The boss nodded. "It's not easy to find this thing in the Realm of Azure Cloud. I asked my friend at the Blacksail Wizard Market to look for it for a long time."

Then, he took out a large piece of Pyroxene. Levi looked at it and found that this amount was enough for him to cultivate the Seal of Protection to the maximum. "How much?"

"20 Aether Stones."

Pyroxene was only a basic casting material, so it was not very expensive.

However, Pyroxene, a non-Ocean School of Thought item, could not be bought with points.

Levi paid the price without hesitation.

Then, he said, "Boss, help me look for breathing technique inheritance diagrams in the nearby wizard market. I like to collect breathing techniques. I won't reject any type of breathing technique. I'll pay you gold coins. If the quality is high enough, I can also pay for it with Aether Stones."

"No problem. I, Manla, admire you for killing the wizards of the Undead Ship," the boss replied with a smile.

His bright future was ruined by the Undead Ship.

Therefore, he hated the Undead Ship to the core.

Unfortunately, his strength was average and he could not take revenge on them.

Levi thanked the boss and left with the Pyroxene.

In this way, among the four great seals, other than the Seal of Flame, the other three seals were about to reach their maximum limit.

In the next month, Levi focused on cultivating the proficiency of the Seal of Protection.

Soon, the Seal of Protection was cultivated to its maximum.

Levi—

Seal of Protection: Level 3 (Maximum), Special Effect: Earth Pulse.

"Earth Pulse: You can feel the pulse of the earth. Your affinity with the earth elements will increase, and your cultivation speed for Earth School of Thought's Meditation Art and spells will increase significantly."

Levi looked at the special effect.

As expected, it was related to the earth element.

Without a doubt, the remaining special effect of the Seal of Flame should have a flame-related affinity..
