

Wizard 310

Chapter 310: Blood Beast Breakthrough, Third Special Effect, Thousand Faces! (6)

"Yes, Teacher. He was killed by an evil spirit with three heads and six arms," Jagri said truthfully.

"What evil spirit with three heads and six arms? I've never heard of it," Angus said.

"I'm not sure either. That evil spirit killed three senior brothers in the blink of an eye. Teacher Bane went to chase after the evil spirit and never returned. I took the opportunity to use the Wizard Tool you gave me to escape the battlefield," Jagri said with lingering fear.

He knew that the evil spirit was most likely Levi.

Levi must have killed Senior Brother Deli and learned of their plan. Then, he used the Shifting Scroll to kill Bane and three Senior Brothers. If not for the sudden appearance of the green-robed wizard, he might have been killed too.

After some thought, Jagri said, "That evil spirit might be Levi from the Gray Tower."

He knew that Levi wanted to kill him. After all, his fellow disciples wanted to kill Levi. Although he did not want to kill Levi, he would still kill him if he had the chance.

It couldn't be helped. This was the Island Master's order.

Morpheus was his teacher. The reason why he could be where he was today was because of Morpheus's support. Before entering the Shadow Realm to explore,

Morpheus had even given him a real Wizard Tool to save his life.

No matter what, he could not betray Whale Song Island.

"I didn't expect a mere legendary knight to kill Bane and four high-level apprentice wizards. Angus, don't you think this is ridiculous?" Morpheus was so angry that he laughed.

Angus's heart trembled as he hurriedly echoed, "Perhaps that old fellow

Herman gave him some trump card. Otherwise, it would indeed be unbelievable. However, that Green Ghost Carter is really useless. I just received news from Demon Harland that Green Ghost Carter was confirmed to have died in the Shadow Realm. There's a high chance that it was Levi who did it. Now,

Demon Harland is still asking us for an explanation."

"No matter what, we underestimated him. In the future, you have to be careful when facing this person," Morpheus said coldly.

Whale Song Island had suffered heavy losses this time. A senior first-circle wizard was already their backbone. Although there were more than ten wizards on Whale Song Island, they could not withstand such a consumption.

Moreover, four elite high-level apprentice wizards had also died inside. This was simply adding insult to injury.

The only thing that made Morpheus a little glad was that his apprentice whom he had high hopes for, Jagri, had returned alive and brought out a lot of resources.

While Whale Song Island was brewing a new scheme...

Levi had returned to his normal cultivation life.

Half a month later, Levi's internal injuries were almost healed.

His strength had returned to its peak.

He had agreed to spar with the Fist of the Empire a year later.

He planned to focus on cultivating the breathing technique that had yet to reach the maximum during this period of time.

Three months later, Levi's Blood Beast Breathing Technique was successfully cultivated to the Maximum Level 10.

Levi—

Blood Beast Breathing Technique: Rank 10 (Maximum), Special Effect: Blood Wings (Liquid), Blood Contract.

Levi stood in front of the mirror and looked at the two-meter-long Blood Wings on his back with a calm expression.

The blood energy gathered behind Levi's back like a pool of blood, forming a pair of liquid bat wings.

Levi tried it out. Now that his Blood Wings had accelerated, his speed had increased by half compared to before.

His current speed was almost as fast as Ms. Marlene's flying spell.

However, the liquid blood wings were still not enough to fly.

He estimated that he would only be able to master the ability to fly short distances after reaching the Solid State.

Levi tidied up the proficiency panel.

He was determined to integrate the Siren Breathing Technique and some shallow-grade speed -type breathing techniques that he had learned previously into the Blood Beast Breathing Technique so that it could break through the limit.

After the breakthrough, Levi's Blood Beast Breathing Technique underwent an unexpected change.

Levi—

Blood Beast Breathing Technique: Level 10 (1/200,000). Special Effects: Blood Wings (Liquid), Blood Contract, Thousand Faces.

After fusing the Level 8 Maximum Siren Breathing Technique with the Blood

Beast Breathing Technique, the original Transcendent Speed disappeared. Like Transcendent Defense, Transcendent Speed overlapped with Blood Wings and was absorbed.

As for the second Special Effect of the Siren Breathing Technique, "Bone Shrinking Transformation", after fusing with the Blood Beast Breathing Technique, it shockingly became a new Special Effect.

[Thousand Faces: It evolved from the Bone Shrinking Transformation and the characteristics of the Blood Beast. You have the ability to change the appearance of the Blood Beast at will. In the eyes of a thousand people, there are a thousand different versions of you. This Special Effect cannot be upgraded.]

"Isn't this the ability of the Blood Clan to change their appearance?" Levi knew that the Blood Clan could change their appearance at will. Anyone they had seen could change their appearance and body shape.

This was also why the Blood Clan could hide so deeply in the human world.

He never expected that after incorporating the second Special Effect of the Siren Breathing Technique, he would actually activate the third Special Effect of the Blood Beast Breathing Technique.

This ability was much stronger than the Bone Shrinking Transformation.

Bone Shrinking Transformation was just a simple change in body shape. By changing his body shape and makeup, he could slightly change his appearance. As long as one looked carefully, one could still see Levi's appearance.

However, this was a complete Blood Clan superpower.

"This Blood Beast Breathing Technique is constantly evolving in the direction of the Blood Clan. Although I'm not a member of the Blood Clan, I now have bat wings, a Blood Contract, and the ability to change my appearance."

Moreover, while Levi had these abilities, he did not have the weaknesses of the Blood Clan. He was bloodthirsty and did not like sunlight.

After breaking through the limit, the Blood Beast Breathing Technique allowed Levi's strength to advance further. The next step was to slowly cultivate to level

11.

By then, he would be a legendary knight in both defense and speed. His overall strength would not be as simple as two legendary knights combined.

After the Blood Beasts broke through, Levi's focus was on the Red Lotus Breathing Technique and the Undying Bird Breathing Technique.

Although the Red Lotus Breathing Technique was the most difficult, with a high-quality secret medicine, it was not slow to cultivate. He could cultivate to Level 10 this year.

The Undying Bird Breathing Technique only gradually improved after Levi completely tamed the Black Flame Demonic Bird a month ago.

The Black Flame Demonic Bird was not big, so Levi did not dare to take its blood wantonly. The production of the Undying Bird secret medicine was relatively limited.

However, compared to before, the speed of his cultivation experience was still much faster.

Holy Brilliance Calendar Year 1020, Month of Northern Wind.

The Undying Bird Breathing Technique had successfully reached Level 8, giving birth to the Special Effect that Levi had been looking forward to for a long time.

Levi—

Undying Bird Breathing Technique: Level 8 (1/100,000). Special Effect: Transcendent Physique.

After giving birth to the Transcendent Physique, Levi finally possessed an extraordinary and powerful physique. Most poisons in the mortal world were ineffective against him, and plagues and viruses could not do anything to him. Moreover, his body had super strong self-healing abilities.

The most exaggerated thing was that theoretically, even if Levi's finger was cut off, it could grow back within a month.

Although such a Transcendent Physique was far inferior to the Blood Clan's immortal body that relied on the Blood River.

However, this ability to regenerate broken limbs was already a qualitative leap.

As far as Levi knew, only low-level spells from the Life School of Thought or the School of Death had such abilities. After all, they studied these fields all day long, so they were very good at it.

Apart from the two schools above, Levi had never heard of any low-level spells from the other schools. For example, the Broken Limb Regeneration spell of the Ocean School of Thought was above the third-circle spell. Levi believed that as long as his Transcendent Physique continued to evolve, In the future, even if he lost an arm or a leg, it would grow back.

While Levi was cultivating, Manla had also spent more than half a year slowly getting rid of the spoils of war.

In the end, after deducting Manla's share, Levi earned 2,000 Aether Stones, in addition to his previous accumulation.

Levi had more than 8,000 Aether Stones.

Now that he had money, Levi could breathe more freely..
