

Wizard 339

Chapter 339: Group Advancement! Dragon Spine, Lifting Beams, Burning Blood Ember! (4)

In any case, no matter how strong he was, he had the proficiency panel.

When the time was right, Levi and Emperor Mu would exchange breathing techniques and learn the breathing techniques of the golden knight and Emperor Mu.

From Emperor Mu's performance, it was obvious that the breathing technique of a golden knight was defensive. It was exactly what Levi needed.

At that time, when he cultivated this breathing technique to level 11 and fused it with his Black Snake Breathing Technique, he might be able to mutate a very awesome breathing technique.

Levi was looking forward to this day.

Holy Brilliance Calendar Year 1023, Month of Harvest.

Kane had been gone for two and a half years.

In this harvest season.

Levi's path of cultivating experience had also yielded huge gains.

As for the wizards, Levi's sixth cantrip, Stone Skin Technique, had been cultivated to the Maximum Level 4.

Levi's defense was one of the best among the passive cantrips. With the Stone Skin Technique stacked under the Solid State Black Scale to protect him, Levi felt much safer.

Moreover, cultivating the Stone Skin Technique to the limit would also be helpful for Levi to learn the advanced version of the spell Rock Body in the future.

In terms of Meditation Art, the Deep Sea Meditation Art was steadily advancing to level 3. The Burning Faction's Sun Meditation Art was about to reach level 3. It was about to surpass the Deep Sea Meditation Art, which made Levi rather helpless.

He was probably a fake apprentice of the Ocean School of Thought. If only that wizard Ron had assigned him to the Burning Faction or the Earth Faction.

In addition to the path of wizardry, Levi had also gained a lot from being a knight.

After cultivating the newly obtained Black Whale Breathing Technique to level 8, a new Transcendent Power was born.

Level 8 Transcendent Power did not add much to the current Levi. After the Black Whale Breathing Technique reached level 9, Transcendent Power would advance further and be of true use.

In addition, the Hunchback Dragon Breathing Technique and the Undying Bird Breathing Technique had both been cultivated to level 9.

After level 9 of the Hunchback Dragon Breathing Technique was the Maximum.

Levi—

Hunchback Dragon Breathing Technique: Level 9 (Maximum), Special Effect:

Dragon Spine (Gas)

Level 9 Hunchback Dragon. The original Transcendent Endurance had been upgraded to a new Special Effect, Dragon Spine.

[Dragon Spine: As a powerful Dragon Clan, the spine of a Hunchback Dragon contains endless power that will never be exhausted. Black gas converges on your spine. You have a trace of the endurance of a hunchbacked dragon!]

With the circulation of the Hunchback Dragon Breathing Technique, black gas kept emerging from Levi's body. The black gas passed through Levi's body and finally converged on Levi's "girder", which was his spine.

This made Levi's spine look like a pitch-black pillar. It was terrifying and demonic.

Levi took a deep breath and exhaled two long streams of white smoke from his nostrils. His back protruded like a dragon's back!

If one looked from behind, one could vaguely see a huge black pillar penetrating Levi's back.

This was the Dragon Spine!

Levi estimated that his endurance was at least twice that of Transcendent Endurance!

Originally, Levi's Transcendent Endurance was already powerful enough. Now that he had transformed into a dragon spine, his endurance in battle would become even more abnormal. He could only be described as inhuman or a monster.

The Hunchback Dragon Breathing Technique was very powerful. Levi did not hesitate.

He immediately integrated the Blood Whale Breathing Technique and the few shallow-level breathing techniques he had obtained into the Hunchback Dragon Breathing Technique, allowing it to break through the limit.

After the Blood Whale breathing technique merged with the Hunchback Dragon Breathing Technique, Levi noticed that the Blood Whale's sac did not disappear. It was still in his body.

This organ born from the Blood Whale Breathing Technique had now become a part of Levi's body. Together with his internal organs, they formed Levi's internal organs.

This was good news for Levi.

With the Blood Whale's sac and the camel's hump, he could provide endless energy support for his dragon spine!

Levi could now live for three years without eating. It was the benefits that these two organs brought him.

It basically eliminated the possibility of Levi becoming a Lunatic Knight.

After the ninth level of the Undying Bird Breathing Technique, Levi was even more surprised.

Levi—

Undying Bird Breathing Technique: Level 9 (11,235/150,000). Special Effect: Blood Ember (Gas), Resurrection.

[Blood Ember: The black gas from the Undying Bird fills your body, strengthens your blood, strengthens your physique, and reconstructs your body. Your physique has undergone a complete transformation. Broken limbs have regenerated, and bones have turned white. It's not a legend!]

A Level 9 Undying Bird actually had such a powerful Special Effect. It was worthy of its name.

Levi finally understood why the family behind this breathing technique had been destroyed. It was because this breathing technique was too powerful and heaven-defying!

Broken limbs regenerated, and bones grew new flesh. This ability was comparable to a mid-level spell, but it came from a mortal breathing technique. Such an existence was definitely a huge threat to the Church.

If the Blood Ember Special Effect continued to evolve, how strong would his physique be?

Beheaded and reborn? Reborn from a drop of blood? Immortality?

In short, there were endless possibilities!

Perhaps, the knights could help Levi realize the path of immortality that he sought.

After all, the Undying Bird was known to be an undying existence.

The second Special Effect of the Undying Bird Breathing Technique was even more abnormal.

[Resurrection: Where the ashes dance, the fire will also grow endlessly. When your body is fatally injured, it will forcefully replenish your breath to prevent you from dying from excessive injuries. However, it is ineffective against destructive attacks. This Special Effect can't be upgraded, but the effect will increase as your realm increases..]
