

Wizard 340

Chapter 340: Group Advancement! Dragon Spine, Lifting Beams, Burning Blood Ember! (5)

Simply put, this Special Effect was a destructive blow as long as Levi's head was not chopped off in an instant, or his bones were shattered and his body disintegrated.

With the Special Effect Resurrection, Levi would be able to keep his last breath. It was equivalent to installing a famous sword. Then, Levi could use the powerful recovery power brought by the Blood Ember to accelerate the recovery of his injuries and return to his peak state in a short period of time! It was similar to the "Turtle Breathing Technique" in some novels.

It was simply a life-saving divine skill!

After half a year of hibernation, Levi's strength had increased again. Especially after level 9 of the Undying Bird Breathing Technique, his strength had undergone a qualitative change.

Kane had been dead for two and a half years. Everything should be settled now.

He felt that it was time to turn Kane into a living dead.

After packing up, he rode on Leviathan and changed his appearance before setting off.

He searched for the coordinates. When he was close to the island where Kane was buried, he got off the Dragon King Whale and asked Leviathan to wait for him in the Deep Sea. He swam over.

He relied on the Black Snake's Message to Perception from afar.

He could still sense Kane's aura. Kane was still buried on this island, which relieved Levi. It seemed that those people had not found Kane's corpse.

Levi carefully swam towards the island. When he was two kilometers away from the island, he used his Advanced Perception to investigate the situation above.

"Not a soul. No one's been here since I left."

Levi was fully armed and protected by the Solid State Black Scale. The Stone Skin Technique flickered with a green light below, ready to activate the defensive spells and flying techniques in the Wizard Tool at any time. However, it was obvious that Levi's worries were unnecessary.

In the end, Levi dug Kane's body out.

Because of the embalming, Kane's corpse did not rot. Instead, it looked lifeless and expressionless.

He carefully checked Kane's body inside and out. It was exactly the same as before he left. There was no difference. There was no mark.

Then, he inserted a Core of the Undead into Kane's mind. Kane's deep black eyes, which had been silent for a long time, opened and flickered with a green

Light.

After Levi's experiment, Kane, who had become a living dead, had no problem using First-Ring Spells like the Big Fireball Technique and the Fireball

Technique. Unfortunately, he could not use the powerful second-ring spell.

Regardless, the living dead of a First-Circle Wizard greatly enhanced Levi's strength in this sea area.

In the end, Levi didn't dare to delay and put Kane's corpse into the Giant Squid Ring. This was a storage ring that Levi had specially used to store various corpses.

Levi's strength had increased greatly, but he had not advanced to an official wizard. In this Wizard World, he had not left the novice village.

Now that he had gained a lot in terms of breathing techniques, he had to work hard to become an official wizard.

He returned to the Gray Tower and obtained all the ingredients that Manla had collected for him from the ingredient shop for the Sandman Potion. Manla was very efficient and completed Levi's mission in just half a year.

Of course, there was still no news of the Gray Naga's Tears that made Naga's Blessing.

Levi had already expected this. This kind of ingredient for potions to break through realms was rare to begin with. Even if it occasionally appeared on the market, it would definitely be taken away by some old pharmacists with more channels and resources. It would not be Levi's turn at all. This was equivalent to the "Foundation Establishment Pill" in the cultivation world. The supply could not meet the demand at all. As long as it appeared in this sea area, it would definitely cause a bloodbath.

However, there was still some time before he became an official wizard, so Levi was not in a hurry.

As long as he could refine [Naga's Blessing] before his Meditation Art reached the Maximum Level 3, it would be fine.

After the last month of special attacks, Levi had cultivated his pharmaceutical skills to level 7.

During this period, there were no obstacles or shackles.

According to his judgment, level 7 was the realm of an official pharmacist.

Therefore, he could start trying to refine the first-circle potion.

He now had about 60 portions of ingredients for the Sandman Potion. This had cost Levi 3,000 Aether Stones and more than 60,000 gold coins. The cost of refining the Sandman Potion was shocking.

Ordinary official wizards could not afford 3,000 Aether Stones, and this was only the raw materials. If one potion was refined into a potion, it would cost at least 150 to 200 Aether Stones on the market. There were only five wizards who could refine the Sandman Potion in this sea area, including Levi.

The potions made by Teacher Marlene were all prioritized for their own use. The rest were bought by the tower and would not be traded on the market at all. It was the same for the official pharmacists of other organizations.

Therefore, very few Sandman Potions were sold in the Blacksail Wizard Market, and the Celestial Circle Shop usually did not sell them.

Levi did not immediately start refining the Sandman Potion. He had just stepped into the official pharmacist realm. If he refined the Sandman Potion now, the success rate would definitely not be high.

In order not to waste the materials that he had painstakingly collected, Levi could only use some first-circle potions with a lower cost to practice. For example, the first-circle red and blue mana potion. The cost of these potions was relatively low, and the cost of refining one potion was only about one-twentieth of the cost of the Sandman Potion.

Just the practice time alone took Levi three months and cost him more than a thousand Aether Stones.

He had refined enough first-circle red and blue mana potions for official wizards to use for a long time.

In the past three months, Levi had no choice but to pause his cultivation of some unimportant Meditation Arts and breathing techniques for the sake of

Pharmacy, such as the Deep Sea Meditation Art and the Black Whale Breathing

Technique.

He calmed down and focused on his Pharmacy profession.

Levi's Level 7 Pharmacy Proficiency had increased by one-fifth in three months.

He estimated that after level 8, he would be a senior first-circle pharmacist. Level 9 should be a second-circle pharmacist.

The current him could already achieve a success rate of 80% with a simple first-circle potion. The consumption rate among First-Circle Pharmacists was already very low.

Levi felt that now was the right time.

He did not want to trouble Ms. Marlene. Otherwise, with Marlene's skills, she would definitely succeed in refining the Sandman Potion, and the quality would be better. Marlene handed the formula to Levi so that Levi could improve independently and become a First-Circle Pharmacist as soon as possible, instead of being Marlene's apprentice. Levi also needed to continuously increase his Proficiency by refining

these potions, so that he could step into the ranks of a First-Circle Pharmacist or even a Second-Circle Pharmacist as soon as possible.

However, before preparing to refine the Sandman Potion, Levi still went to find Marlene and told her that he had broken through to become an official pharmacist. He was also prepared and planned to try to refine the Sandman Potion. He wanted his teacher to teach him some experience skills in refining the Sandman Potion.

This made Marlene excited for a while because Levi was the first and only official pharmacist she had personally taught.

This also meant that there were two official pharmacists, Marlene and Levi, in the small second-circle organization of the Gray Tower!

If not for the fact that the Tower Master was in seclusion, Marlene would have shared this joy with him immediately.

Marlene directly gave Levi the notes she had accumulated from her experience, skills, and mistakes when she was refining the Sandman Potion.

Levi paid a symbolic 500 points. The true value of such a notebook was far from what 500 points could measure. However, in order to prevent the points from depreciating too much, the tower would periodically take back a portion of the points in the hands of apprentices in various forms.

With Marlene's help, Levi's success rate in refining the Sandman Potion increased significantly.

When he was ready, he locked himself in the Pharmacy Room on the ninth floor of the Gray Tower and prepared to go into seclusion for a period of time.

Levi took a deep breath and calmed himself down.

"Good luck. If you fail once, you will throw away 50 Aether Stones and 1,000 gold coins.. This is not alchemy, but burning money!"
