

Wizard 387

Chapter 387: First-Circle Wizard and Official Wizard (5)

Only with such a scientific and reasonable spell combination could the strength of a First-Circle Wizard be maximized.

It was very difficult for another wizard to do this because they could not learn so much Meditation Art at the same time as Levi. This was the special feature of the proficiency panel.

Levi had already mastered four First-Ring spells. He was almost at the level of a wizard, but he still lacked a lot of spiritual force. After all, he had only become an official wizard for a short period of time, and it was impossible for him to improve too much in a short period of time.

Apart from the four spells mentioned above, Levi planned to cultivate Undead Summoning and Sacred Insect Touch after he moved into his island. He would not cultivate them in the tower, especially Undead Summoning. He did not want to summon some strange things from hell and cause trouble for the organization.

Levi's spiritual force was 22 points, and his maximum spell power was 440 points. Ordinary First-Ring spells, such as Water Prison and Fireball Technique, would only consume about 30 points of spell power. The more difficult the spells were, the more spell power they would consume. For example, Green Smoke Escape and Big Fireball Technique would consume 50 points of spell power. As for the most difficult spell, Body of Ghost Fire, it would consume 100 points of spell power each time.

Although spell power could be recovered in a short period of time with green potions, it would definitely require a short period of meditation. There was no way to recover it quickly in battle. Potions that could recover magic power in battle were especially expensive. Even Levi, a First-Circle Pharmacist, did not have the formula, let alone others.

Therefore, before every battle, a qualified wizard would calculate which First-Ring Spell to use in the battle, how to match the spells to kill the enemy, etc. In a battle between wizards, skills were not randomly thrown around. One had to plan and think carefully before moving. Of course, if he advanced to an intermediate wizard and could solidify his innate spells on top of his spiritual power, this awkward situation would be better. Innate spells were the same as the innate spells of many extraordinary creatures. They were convenient and fast. They did not need casting materials to cast spells and consumed very little spell power.

Apart from these First-Ring spells, Levi had also learned a lot of common cantrips that he might be able to use in the future, such as “Light”, “Sound of Silence”, “Grease,” and so on. Anyway, now that he had advanced to an official wizard, there was no limit to the number of cantrip spell slots. These cantrips that did not consume much magic power were naturally the more the better. They would be useful in the future. These cantrips were mainly for support purposes. There were very few offensive ones. It was obviously unrealistic to expect cantrips to fight against the official wizard.

After systematically mastering the spell of these mainstream factions, Levi informed Marlene and set off on the Dragon King Whale. This time, he was going to the [House of Archipelagos] under the Star Tower to buy an island that belonged to him. He wanted to open up a medicinal garden on this island and build some special breeding bases for Saint Scorpions. Then, he would start his research on alchemy and magic circles. From now on, this place would become his second home. Anything that was inconvenient to do in the Gray Tower, Levi would do it here.

Apart from that, when Levi left the Gray Tower, he also used all his points and 3000 Aether Stones to obtain the [Spider Witch], a Second-Circle Wizard’s School of Insects inheritance from the Island Master. This inheritance included the Spider Witch’s Insect Control Notes, as well as the spell to control the Red - Faced Sea Ghost Spider, the breeding methods of spiders, and so on. In short, whether Levi wanted to use the Red-Faced Sea Ghost Spider as his main insect in the future or not, this knowledge was priceless to him.

After all, Levi did not kill the Spider Witch himself, so he could not get the inheritance for free. However, to be honest, 3000 Aether Stones was no different from getting the inheritance of a second-circle School of Insects wizard. For wizards, the most valuable thing was knowledge inheritance. Just the 1,000 or so low-grade insects [Red-Faced Sea Ghost Spider] in the Spider Witch’s bug house alone would cost at least 10,000 Aether Stones on the market.

Seven days later, Levi arrived at the island where the Stellar Resource Committee was located on the Dragon King Whale.

In his previous life, Levi had struggled in the Imperial Capital for many years and could not even afford a house.

In this life, he would buy an island and become the island owner himself. Wouldn't that be great?

"Hello sir, are you buying an island? Please show me your membership card for the Pan-Plane Wizard Council."

A black-haired witch wearing a short witch dress had her eyes lit up. When she saw Levi, it was as if she had seen a little lamb. Due to the impact of the sea beast tide some time ago, the trading market on the islands in this sea area was not doing well. It had been a long time since a wizard had come to this trading hall. This time, he had to find a way to make this customer buy a big island..
