

Wizard 411

Chapter 411: Surpassing Legendary Rank! (3)

After level 11, the breathing technique seemed to have reached a watershed. Its dependence on secret medicine increased further. Without secret medicine, it was difficult to cultivate the breathing technique.

Levi felt that the secret medicine would be the key to his breathing technique cultivation. After becoming a legend, the materials needed for the secret medicine needed to be updated. Many of those mortal materials needed to be eliminated and replaced with extraordinary materials with similar functions.

If one could still rely on ordinary secret medicines to cultivate before becoming a legend, then after becoming one, if one wanted to gain experience quickly, one would need corresponding extraordinary secret medicines. Moreover, simple concoction was no longer possible. The next secret potion might require Levi's pharmaceutical knowledge to carry out the refining.

"Fortunately, I'm a pharmacist. This is my forte."

Levi was glad that he had made the right decision to become a pharmacist. Whether it was a knight or a wizard, they could not do without the profession of a pharmacist.

Currently, in Levi's breathing technique system, other than the Golden Snake, the only ones that needed cultivation were the Saint Ape, the Giant, and the

Ostrich Mountain. Now that he had successfully broken through the limit once, Levi planned to break through the limit of the Red Lotus Breathing Technique.

In the following days, Levi began to study the Golden Snake Potion while cultivating.

First of all, there was no doubt that it still required snake blood, dragon horn powder, and ambergris. As for the other ingredients, Levi quickly found suitable transcendent-level substitutes in the Wizard World based on his own pharmaceutical knowledge, replacing the ordinary ingredients.

After Levi's test, the effects of the potion made from Jorman's snake blood were much better than the blood of the first-circle sea snake he had obtained. Therefore, he guessed that if the dragon horn powder and ambergris were also extracted from the bodies of second-circle transcendent creatures, the effects of the snake potion would be even better.

For the secret medicine after the legendary realm, the main ingredient had to be at least a first-circle transcendent creature to be effective. The higher the grade, the better. Levi believed that he could rank his snake potion. If all the secret medicines were refined by first-circle transcendent creatures, it would be a level 1 secret medicine. If all the secret medicines were refined by the second-circle transcendent creatures, it would be a level 2 secret medicine.

The current situation was that among Levi's snake potion, only the snake blood was of the second circle. The dragon horn powder and other materials were all of the first circle.

Therefore, his snake potion was only at Level 1.5 at best.

Of course, there was nothing he could do about it. Levi could not encounter a mixed-blood dragon with two rings and long horns, and even if he did, he would not be able to defeat them. Now, he could only make do with Leviathan's dragon horns and ambergris.

Or rather, he could think of a way to let Leviathan advance to the second circle and continue to take advantage of Leviathan. However, this was also unlikely. Transcendent creatures like Leviathan did not have the concept of cultivation. Their growth limit was dead, and it was very difficult to break through. Unless they had some special fortuitous encounter, it was possible to break through the shackles of their bloodline.

Finally, after half a year of research and experiments, during the Month of Germinal in the year 1031 of the Holy Brilliance Calendar, Levi had successfully developed the extraordinary version of the snake potion. After consuming the medicine, his cultivation speed would be three times faster.

In other words, if he consumed the first-generation secret medicine, Levi would be able to raise the Golden Snake Breathing Technique to Level 12 within five years. This was basically what Levi had expected.

When he reached level 12 and truly broke through to the legendary realm, he might have the capacity to fight against a second-circle transcendent creature. At that time, he would think of a way to capture a second-circle transcendent creature to take over Leviathan's position so that Leviathan could retire in peace.

After solving the problem of the secret medicine, Levi officially started cultivating the Golden Snake Breathing Technique. This breathing technique was improving at a slow pace. After the Golden Snake Breathing Technique was on the right track, Levi began to cultivate the other skills gradually.

Before the Golden Snake Breathing Technique reached level 12, he had to strive to break through the limits of more legendary breathing techniques, and then his wizard realm would also reach the level of a first-circle veteran wizard.

Apart from training, Levi did not forget to study his [Golden Horn]. He felt that the main function of this extraordinary organ was not to protect his head.

Unfortunately, Levi tried for a long time, but nothing came out of Golden Horn.

He guessed that the level of the Golden Snake Breathing Technique was not high enough, and the extraordinary organ had not fully developed yet. When his breathing technique level increased, there would be a day when the Golden Horn would not disappoint him.

During the Month of Flowers, Levi and Emperor Mu fought as usual. Levi, who had the defense of the Black Gold Scale, could almost deflect all of Emperor Mu's attacks. The more he fought, the more frightened Emperor Mu became. In the end, he was unwilling to admit defeat.

As a legendary knight, Emperor Mu could feel that Levi's breathing technique had improved. It was obvious that Levi had gone further than him on the road to becoming legendary.

Emperor Mu had no choice but to accept all kinds of missions when he returned to Sighing Sea Breeze. He tried his best to earn money so that he could enter the Realm of Life as soon as possible and stay away from the leader..
