

Wizard 421

Chapter 421: Legendary Giant, Each Wisp of Breath Turns into an Arrow! (3)

Levi wasn't in a hurry to break through the limits of the Giant Breathing Technique. He planned to wait until the Saint Ape Breathing Technique had reached its limit before fusing it with the Giant Breathing Technique to cause a mutation. After all, these two breathing techniques were both arm-strengthening breathing techniques.

After Levi came out of seclusion, he immediately began to prepare for this long journey. He took out the sea map that he had previously obtained, which recorded the lost Pan's Labyrinth. It would take about half a month to get to his destination from Black Fire Island, which meant taking a round trip would take a month just on travel time alone. Including the time he needed to be certified as a pharmacist, the journey should take about two months. When he returned, the Haitian Sorcerer Festival would begin.

On this trip, Igor, Moot, Carter, Rock Troll, and Rock Troll's wife would stay home to keep watch, while he brought Kane, Tyrell, and Little Octo. This way, he could fight even if he encountered a second-circle opponent.

Levi left Black Fire Island on Leviathan after he was done with his preparations.

He headed north and was out of Area 9's sea region in a few days. Between Areas 8 and 9, there was a vast sea with no habitable islands but a few wizard organizations. There were also many first-circle sea beasts living here, including the Sea Clan. Occasionally, even second-circle sea beasts would appear.

At the same time, he fully activated the perception of the Black Serpent's Message to guard against any dark wizards that might appear.

It wasn't that he was worried for nothing. As far as Levi knew, the Endless Sea was where there was literally no one around and sea beasts lurked. It was called the "Sea of Freedom" by many dark wizards. This was because the law enforcement force of the Star Tower was extremely weak here, so there were many dark wizards active in this sea area.

Along the way, Levi would occasionally encounter some one-circle sea beasts. He looked around and saw that none of them were the mixed Dragon Clan that he wanted, so he did not make a move, lest he attract other two-circle sea beasts. With his current strength, he did not have much confidence in facing them yet.

Just like that, Levi traveled safely for three days. He only needed four more days to leave this uninhabited sea area.

On the fourth day, Levi, who was meditating in the mouth of the Dragon King Whale, suddenly heard the Dragon King Whale's alarm. He could not help but wake up. He activated his Advanced Perception and sensed that there was a huge ship slowly sailing about a kilometer away in the sea ahead. On the huge ship, two groups of people were fighting.

"It's not the Azure Ship. The Azure Ship won't pass through uninhabited waters like this. It's a private boat, probably a wizard ship of some wizard organization."

In the Endless Sea, some rich wizard organizations would buy or build their own wizard ships. These ships were often made of precious extraordinary materials, as well as solidified with various spells. They were also equipped with alchemy cannons and arrays. They could be said to be moving fortresses on the sea. Only such a ship would dare to sail in the uninhabited sea where sea beasts lurked.

This was the case for the ship in front of Levi.

At this moment, he was a thousand meters below the ship, observing the huge ship that was two hundred meters long. It was made of the Black Sea Ancient Tree, which could float very well in water

and was very solid. Solidification spells could also be used on it, making it a high-quality material for building wizard ships.

At the bottom of the huge ship, there were the words “Made by the Seven Waters Steeple”.

"So it's a wizard ship made by this organization." Levi was slightly shocked.

Generally speaking, only organizations with high-level wizards were qualified to be called “steeples”, such as the Black Sun Steeple.

The Seven Waters Steeple was such a seven-circle wizard organization. It only did one thing, and that was to research and build wizard ships.

All the Azure Ships in the Endless Sea were made by this organization. Many wizards who were proficient in shipbuilding, alchemy, and arrays would work in the Seven Water Steeple since the “technical staff” there were treated very well.

In addition to building Azure Ships for the Star Tower, the Seven Waters Steeple also accepted private orders from other wizard organizations and wizards. However, even the cheapest wizard ship was not something that Levi could afford. Rather, even the Tower Master could not bear to buy one. It could be seen how valuable a ship was. Other than those wizard organizations that were engaged in business and needed to go out to sea frequently, ordinary small wizard organizations would never buy a ship.

At this moment, the sounds of fighting could be heard from the wizard ship.

On the side of the ship, the pattern and emblem of the Jostar Family were carved. It was a golden lion that looked like it was cast in gold.

The Golden Lion Jostar family was a famous wizard family on the Yellow Earth Continent. There were many three-circle wizards in the family. The family's business involved medicine, metals, materials, and other industries.

Currently, a young wizard with thick blonde hair and a burly figure, who had obviously also cultivated the path of knights, was being attacked by two first-circle wizards.

"Bad luck, bad luck. I didn't expect dark wizards who escaped from Abyss City to have already come to this sea area."

Dinos Jostar, the blond wizard, looked anxious. He was the third young master of his family and the youngest son of the Golden Lion Jostar Family's family leader, who was known as the "Old Golden Lion". He had been sent by his father to train on the family's merchant ship some time ago.

Now, he had completed a large trade order and completed his training, expecting a smooth journey back. He did not expect that his return journey would be filled with bad luck..
