

Wizard 444

Chapter 444: Level 5 Devil Blade, Silver Mountain Dragon!(2)

Not long after reaching the maximum of level 4, Levi successfully broke through to level 5 of the Black Devil Blade.

In the blazing Black Fire Cave, Levi stood up straight. Behind him, a seven-meter-tall black evil spirit appeared. The evil spirit's six arms were wrapped in black silk ribbons. The ribbons fluttered without wind and wrapped around its body. It had three heads and six arms, each holding a sword. It was extraordinary. Levi felt that the evil spirit now had the charm of Nezha.

Other than becoming bigger and stronger, the details of the black evil spirit also became intricate. This change seemed related to Levi's spiritual force. The stronger Levi's spiritual force was, the more detailed the Nine Swords Asura would be. At this moment, the evil spirit wore scaled armor similar to the ancient generals, emitting the murderous aura of a seasoned veteran.

Levi tilted his head, and so did the evil spirit.

Levi wondered, "I wonder if I can fight against a Second -Circle Wizard in my

Nine Swords Form."

According to the previous pattern, every time Levi's Nine Swords Asura evil spirit advanced, his strength would also surge. The Nine Swords Form was undoubtedly Levi's strongest form at the moment, followed by the Red Lotus Form and the Giant Whale Form.

Levi dismissed his previous thought, saying, "I shouldn't have such dangerous thoughts. No matter how many trump cards I have, I shouldn't keep thinking about challenging those stronger than me. Wouldn't it be better to advance directly and beat them up?"

Levi unsummoned the Nine Swords Asura evil spirit.

In his opinion, this evil spirit was similar to a Dharma Idol, a product of the combination of spiritual force and wizard power. Levi's wizard power was the black gas.

Levi thought, "If I want to advance to level 6, I might need the spiritual force of a Second -Circle Wizard, which is more than 50 points of spiritual force."

Levi only had 30 points of spiritual force, so he still had some ways to go. However, he was pretty close with the meditation supplementary potion in hand.

He came to the cave's depths, where he usually refined array items. In front of him was a scorching lava pool, and dense fire element power emanated from the lava. He wanted to cultivate the Big Fireball Technique here.

Levi took out the spell book for the Big Fireball Technique and began constructing the spell model.

The Big Fireball Technique was an advanced version of Fireball, so it was straightforward to construct. He only needed to add some improvements to his current spell model.

In less than a week, Levi had finished constructing the spell model for the Big Fireball Technique.

Levi's proficiency panel had already recognized his progress in the Big Fireball Technique.

[Levi]

[Big Fireball Technique: Level 5 (1/30000)]

"Just as I expected, the proficiency of my maximum level 5 Fireball Technique has been perfectly inherited by the Great Fireball Technique. The maximum of the Great Fireball Technique should be level 6, which is one level higher than the Fireball Technique. Second -Ring Spells start from level 7."

By now, Levi had more or less figured out the level system of spells.

After mastering the Big Fireball Technique, Levi now had six First-Ring Spells.

The other five were Water Prison, Green Smoke Escape, Rock Body, Sacred Insect Touch, and Nature's Secret Language.

Next, Levi had another life-saving skill he could learn as a First-Circle Wizard, which allowed him to elementalize his body to avoid many forms of damage.

This skill was the Body of Ghost Fire.

Levi believed this was the most potent low-level spell of the School of Death.

Generally speaking, elementalization spells could only be learned by intermediate or high-level wizards. However, the School of Death could actually use a heaven-defying skill like the Body of Ghost Fire when they were still low-level wizards. This was annoying to other wizards.

However, the elementalization of the Body of Ghost Fire could only be considered partial elementalization, similar to the spiritual body of an evil spirit. Although it was immune to the most basic physical attacks, it was not completely resistant to the black gas of knights and some elemental spells. Moreover, the Body of Ghost Fire had a very long cooldown time, so this elementalization was not comparable to that of high-level wizards. Of course, even so, this spell could only be described as abnormal.

The Body of Ghost Fire was similar to the Rock Body. They were both passive spells that required spell runes to be directly solidified onto the body. However, the spell power consumed by the Body of Ghost Fire was several times that of the Rock Body.

Levi struck while the iron was hot and began constructing the spell model of the Body of Ghost Fire.

The Body of Ghost Fire was a spell of the School of Death but was also related to fire, so the special effect of the Dance of the Fire God mildly enhanced it. Therefore, although the construction of its spell model did not progress as smoothly as that of the Big Fireball Technique, Levi still successfully constructed it within half a month.

Unfortunately, Levi had to start cultivating the Body of Ghost Fire from level 1.

Levi chanted an incantation, and dark green spell runes lit up on his body. Most of the spell runes that had lit up instantly dimmed after, and only the spell runes on Levi's right arm remained bright. Then, with a bang, Levi's arm suddenly burned up, turning into a green ghost fire arm.

Levi reached out to touch his right arm with his left hand. It passed right through the green flames.

"The level 1 Body of Ghost Fire can only elementalize part of my body." Levi was speechless.

Moreover, the part that would elementalize was random.

"Alright. I will take my time to cultivate this from scratch."

Levi came out of seclusion to inspect Black Fire Island.

He found that the herbs were growing well. Some of the herbs with short growth cycles could be harvested in a few years..
