

Wizard 476

Chapter 476: Great Expedition Era! Level 12 Golden Snake!

(2)

The days were very fulfilling.

In another cave, the Crimson Fire Dragon Lizard was locked under a pillar in boredom. It had lost its dream.

Levi named it “Drogon”.

Drogon did not know how he had survived the past year. That damned human would come to collect his blood every once in a while and give him some food at the same time.

At first, it refused and wanted to starve itself to death. However, for some reason, every time the man who kidnapped it approached, a sense of shame and intimacy would arise in its heart of hatred. Then, it would unconsciously eat very happily.

This was simply abuse!

Levi’s Nature’s Heart and Dragon Affinity had begun to take effect.

Unknowingly, the Crimson Fire Dragon Lizard's favorability towards Levi increased.

However, he still needed some time to completely tame this big fellow.

The current Black Fire Island was like the zoo of Area 9.

Dragon King Whale, Red Sand Ape, Crimson Fire Dragon Lizard, Fire Elemental Spirit, Poison Fire Bone Snake, Black Flame Demonic Bird, Saint Scorpion, Red -Faced Sea Ghost Spider...

As Levi tamed more transcendent creatures, if any enemy dared to invade Black Fire Island in the future, Levi would let them know what the world was like.

It was the year 1036 of the Holy Brilliance Calendar, the Month of Grass.

Levi had successfully completed the refinement of the main body of the Corpse Digger, and the war machine had entered the final stage of installation and refinement.

Levi's Furnace Meditation Technique had also broken through to level 5, reaching the rank of a senior first-circle. His alchemy skills had also improved greatly.

Levi-

[Alchemy: Level 4 (13678/20000)]

"Level 5 should be the alchemy standard of a second-ring alchemy wizard. I'm very close to level 5 now."

Although they were both Level 4 alchemists, there was a difference between one proficiency point and more than 10,000 proficiency points. However, this difference had not reached the qualitative change of level 5.

Levi stopped his cultivation and focused on the final sprint.

He wanted to strive for success on the first try. Although he could still refine a second time if he failed, it would still waste a lot of time.

The early preparation work was the most tiring part of the refinement of the Corpse Digger. There could not be any mistakes in the refinement of all kinds of components and the inscription of runes.

On the other hand, Levi felt that the final installation and refinement were not that difficult.

A month later, he had finished installing the Corpse Digger.

Right now, in front of Levi, the five-meter-tall mechanical alchemy creature stood like a standing hedgehog with a hunched back. Its entire body was covered with sharp barbs, and these barbs were engraved with runes. On top of them was a circle of attack-type alchemy [Lesser Lightning Splash]. Through these barbs, it could release electric currents in the surroundings, paralyzing enemies and stunning them. Weak enemies would be electrocuted to death.

The front of the monster was the hardest part of its body, and there was also a Level 1 alchemy [Elementary Magnetic Field] on it.

The magnetic strength was a magical magnetic force that formed a protective barrier that repelled attacks. Basically, most first-circle offensive spells could be blocked, and so could physical attacks.

In addition, the Corpse Digger's body of steel had been tempered and solidified by Levi's runes, and it also had a huge shield that was also solidified with protective spells. There was no need to worry about the defense of this big guy.

Apart from Second-Circle Wizards, First-Circle Wizards would not be able to break through its defense in a short period of time. Once the Corpse Digger got close, it would be their end.

The magnetic force field had another function. This alchemy method could be operated in reverse. In that case, the repulsive force could be turned into a powerful suction force. The suction range of the low-level magnetic force field was 50 meters. In other words, if an enemy was within 50 meters of the Corpse Digger, the magnetic force field could be pulled to the front of the body and directly use its close combat advantage to smash the enemy.

The giant axe in the hands of the Corpse Digger was made of Luminant gold and mithril. Some zero-circle alchemists were fixed on it, such as [Swirling Swallow Return] and [Precise Throw]. This allowed the Corpse Digger to form effective long-range damage by throwing the giant axe. Moreover, the giant axe could be returned to the hand, which was equivalent to the giant axe flying sword in the other world.

Apart from that, this big thing that Levi had spent nearly two years on had many other functions. For example, it could fight in all terrains. It had a floating spell installed under its feet, allowing it to move quickly and leap in the air for short distances. It could also dive into the deep sea and engage in underwater combat.

Furthermore, Levi had even installed a ring of alchemy cannons on the head and chest of this big guy. Cannons and mechas were the true passion of men.

"Now, it's time to test my results," Levi took a deep breath and muttered. Even with his mental state, he could not help but feel nervous.

He had already loaded the Corpse Digger with Aether Stones. He would first use Aether Stone to test if it could be activated and then let Ace try to blend in.

"Anda...Moke..." Levi chanted.

At the same time, a crimson light suddenly lit up in the dark eye sockets of the Corpse Digger.

The sound of an engine starting echoed in the cave abode.

The magic runes on the body of the Corpse Digger lit up one by one.

The earth began to tremble slightly as if a terrifying demon king was about to be born.

The Corpse Digger's head turned mechanically and looked directly at Levi..
