

Wizard 564

Chapter 564: Change in the Interface! Meditation Art Fusion! (5)

Levi spent the entire afternoon shopping. In the end, he found a courtyard about five miles away from the Tower of Pharmacists.

This place was very close to the Tower of Pharmacists. Levi felt that it was unlikely that Rex and the others would attack him here.

In the courtyard was a three-story wizard tower.

Levi and the agent were waiting for the owner to arrive and sign the agreement.

Not long after.

A Second-Circle Wizard in an army robe hurried over.

"Sorry, I just finished my mission. Eh... it's you?"

This Second-Circle Wizard was the captain of the army, Wizard Sherman, who had met Levi once.

"Mr. Sherman, I didn't expect you to be the owner of this house. This is really fate," Levi said with a smile.

"You've also advanced to the second-circle. Congratulations," Sherman said kindly as he sensed Levi's spiritual power fluctuations that were different from before.

After signing the contract with Sherman, Sherman handed over the entry incantation and the usage of the arrays to Levi and left in a hurry.

He was a second-circle senior wizard and was not far from the third-circle. He was now working hard to complete missions every day and accumulate more merit points in exchange for more resources to break through to the third-circle.

Levi watched Sherman leave and couldn't help but sigh. In this city, everyone worked hard to make a living. In essence, they were no different from mortals.

After entering the wizard tower, Levi used his knowledge of arrays to carefully check the wizard tower inside and out.

It was to prevent the previous owner from leaving some traps or peeping at his privacy.

After confirming that he was fine, he stayed in the wizard tower and activated the first-circle shielding array.

He added some arrays that he had refined himself. This way, it was enough to resist the detection of most wizards.

If the other party forcefully probed, Levi would naturally sense the fluctuations of the array.

"I finally have a temporary home in Riptide City. I wonder how the Black Fire Island is doing."

The annual rent for a residence in Middle Riptide was 100 Aether Stones. Although it was not cheap, it was much better than Upper Riptide.

In Upper Riptide, the security was better. The elemental power was richer, and the arrays on the houses were more advanced. Other than that, it was not much better.

Moreover, it was easy to get into trouble by being neighbors with those big shots.

Thinking about it this way, Levi felt that Middle Riptide was pretty good.

After moving to a new house, Levi even invited Grimm and Tommen to hold a proper party in his wizard tower.

He invited some proper witches to do a striptease dance.

He should celebrate his advancement to the second-circle.

Otherwise, it would be meaningless to live like a robot all day.

After a rare period of relaxation, Levi continued his days of Pharmacy and cultivation.

He no longer had the secret medicine for the breathing technique. His progress in cultivating the Knight Breathing Technique was slow.

He decided to temporarily stop cultivating part of the breathing technique and focus on cultivating the path of a wizard.

The Big Fireball Technique advanced to the Five Fireballs Technique not long after!

After the King Kong Rock Body, Levi had also mastered the second-ring spell and officially had the attack power of a Second-Circle Wizard.

In addition, those First-Ring Spells, such as Green Smoke Escape and Water Prison, were also very useful even at the second-circle stage. It did not mean that they were completely useless.

Starting from the second-ring spell, the difficulty of obtaining spells began to increase.

It was unlike Levi's first-circle period where he could exchange for it from the Gray Tower.

In theory, a Second-Circle Wizard could master nearly twenty second-ring spells.

But in fact, many Second-Circle Wizards only knew a few second-ring spells.

Firstly, second-ring spells occupied a large amount of spiritual force memory and were slow to learn. Secondly, second-ring spells were very difficult to obtain.

Unless he could join a large wizard organization, there were only a few second-ring spells in small wizard organizations like the Gray Tower. There was no choice.

After mastering the Five Fireballs Technique, Levi could also start cultivating another second-ring spell that he had been looking forward to for a long time.

Second-circle spell, Red-Faced Sea Ghost Spider Defence.

This was a second-ring spell specially developed for the Red-Faced Sea Ghost Spider to control this Zerg.

Now that Levi was a second-circle, it was time to completely subdue the Red -Faced Sea Ghost Spider.

The Red -Faced Sea Ghost Spider was good at control and poison attacks. Coupled with the Saint Scorpions, it was probably enough to make a Second -Circle Wizard suffer.

All the spells of the School of Insects were similar, but they had different adjustments for different Zergs.

For Levi, who had already learned the Sacred Insect Touch to its limit, mastering this second -ring spell was not difficult.

Not long after, the spell model for this second-ring spell was also constructed. Levi tried to take out a Red-Faced Sea Ghost Spider from the Bug House.

The breeding of the Red-Faced Sea Ghost Spiders was very slow. In addition, Levi did not have any specialized breeding, so his care was average. Many Red -Faced Sea Ghost Spiders devoured each other.

After such a long time, not only did the number of Red-Faced Sea Ghost

Spiders in the Bug House not increase, but there were only half of them left. There were only about 500 of them, but these 500 were relatively strong individuals.

Levi intended to take care of these spiders from now on and stop them from going extinct.

A spiritual force thread connected to the Red-Faced Sea Ghost Spider. Levi's heart skipped a beat. The feeling of control was very obvious.

Levi easily controlled the Red-Faced Sea Ghost Spider. The spider, which was the size of a human head, crawled on Levi's body, looking very terrifying..
