

Wizard 566

Chapter 566: Change in the Interface! Meditation Art Fusion! (7)

To his surprise, the Red-Faced Sea Ghost Spider was only level 3, but it had already cultivated to the limit.

In other words, the Maximum of this second-ring spell was to control a thousand Red-Faced Sea Ghost Spiders.

This was Levi's first time encountering a level 3 Maximum second-ring spell.

It could only be said that the spells of the School of Insects seemed to be a little special. They did not match the traditional spells he knew.

At the same time, Levi discovered that on the proficiency panel, the Red -Faced Sea Ghost Spider Control and Sacred Insect Touch had also changed.

Levi—

Sacred Insect Touch: Level 5 (Maximum, fusion feasible)

Red -Faced Sea Ghost Spider Control: Level 3 (Maximum, can be fused)

Curious, Levi clicked on the fusion option and read the introduction.

It probably meant that because the Red-Faced Sea Ghost Spider Control and the Sacred Insect Touch Spell Constitution were more than 60% similar, the two spells could directly fuse.

This was different from the Fireball Technique transforming into the Big Fireball Technique. It was a completely advanced relationship that could directly break through the limit.

Levi realized that as his strength increased, the flexibility of the proficiency panel was also constantly increasing.

For a moment, Levi was actually thinking about the proficiency panel. What was the origin of such a boring question?

At last, he gave up thinking.

"Fuse."

Under Levi's gaze, after consuming some spiritual force, the two insect control spells on the proficiency panel disappeared.

In its place was a new spell.

Levi— Spider and Scorpion Song: Level 5 (1/30,000). Special Effect: Spider Scorpion

Heart.

"Another Special Effect."

[Spider Scorpion Heart: Your affinity with spider-type and scorpion-type transcendent creatures has increased.]

"I can do that?"

Levi was shocked.

The interface panel was his savior!

The modified Spider and Scorpion Song was a pure second-ring spell created by Levi.

Although it was said to be original, it was actually a spell obtained by stitching up the advantages of the Sacred Insect Touch and the Red-Faced Sea Ghost Spider.

Not only could he control the Saint Scorpions, but he could also control the Red -Faced Sea Ghost Spider. It was killing two birds with one stone.

Of course, that Special Effect was also especially useful. It could help Levi cultivate this spell to the limit faster.

Moreover, if he encountered spider-type and scorpion-type Zergs in the future, Levi might be able to tame them through this spell and continuously nurture stronger Zergs.

"I wonder if this spell can pass the scholar certification of the Pan-Plane

Wizard Council."

Levi looked at the brand new spell model in his mind.

As long as he wanted to, he could engrave the structure of this spell model into the memory slate for others to learn.

"I'm too weak now. When I reach the intermediate level, I'll consider becoming a scholar.

"This way, I might be able to create the strongest School of Insects spell that can control all the Zergs once and for all!"

There was a huge copy of spells in the world. How could a wizard's matter be called copying? This was a reference!

The birth of this original spell also gave Levi some inspiration.

It seemed that in the current proficiency panel, as long as the two spells were similar to a certain extent, he could fuse them and create new spells.

This was similar to the fusion of the same breathing technique in the Knight Breathing Technique.

He decided to use cantrips from other schools to test this function again.

In that case, just like the Knight Breathing Technique, as long as Levi continued to stack and accumulate, he might be able to create his own second-ring spell or even third-circle spell through cantrips and First-Ring Spells.

This way, he wouldn't have to buy those expensive spell books in the future. He could just synthesize them himself.

In any case, cantrips and First-Ring Spell books were relatively cheap and easy to obtain.

But Levi didn't have time for that right now.

After more than two years of service, he had accumulated 15,000 Merit Points.

Right now, Levi was most worried about the secret medicine of his Knight Breathing Technique.

Although he had improved very quickly in the path of wizards recently, he had already stopped cultivating some important breathing techniques for a long time. He could not delay any longer.

There were some secret medicine ingredients in the Tower of Merit, but they were too expensive, not cost-effective, and not complete. After all, the secret medicine for knights and the ingredients needed by wizards could not completely overlap. The Tower of Merit was prepared for wizards, not knights.

It was better to keep these merit points to exchange for Wizard Tool and knowledge in the future.

After more than two years of service, Levi could take a leave of absence. He wanted to return to the Black Fire Island to see those transcendent creatures and take back enough secret medicine.

At the same time, he also wanted to find out where Ms. Marlene and the others were and see if he could capture the sea dragon crocodile.

Of course, before setting off, in order to make the journey safer.

Levi was determined to take out the third-circle Wizard Tool, the Great Black Sky Curtain, to familiarize himself with it and completely make it his Wizard Tool.

Many Second-Circle Wizards did not even have a Second-Circle Wizard Tool. Levi had a third -circle Wizard Tool.

Coupled with his path as a knight, he felt that he should be among the top below the third-circle.

As for himself, he had just stepped into the second-circle realm. If he stepped into the second-circle senior realm, he did not know if he could cross a major realm and fight a third-circle..
