

Wizard 606

Chapter 606: Earth, Fire, Wind, and Water—Four Elements Combined! Great Fusion! (4)

"Snowfield Wolf Bloodline (contains 2% Silver Frost Wolf Bloodline), Black

Flame Demonic Bird Bloodline (contains 0.7% Undying Bird Bloodline), Red

Dragon Lizard Bloodline (contains 1.1% Red Lotus Bloodline)..."

These were all samples Levi planned to use for the bloodline transplant.

In fact, if these transcendent creatures could cultivate the breathing technique, Levi would not have to spend so much effort to use the fur clan as an experiment.

If Leviathan was allowed to cultivate the Black Whale Breathing Technique directly, this young man would definitely cultivate quickly.

From the looks of it, only humans or humans similar to humans could cultivate the breathing technique.

Transcendent creatures mostly grew naturally. There was no such thing as cultivation.

Transcendent creatures slept and ate. They could also grow and increase their strength until they reached the upper limit of their race, although this process often took a long time.

Leviathan was like that. If Levi had not obtained the blood fungus that contained its powerful ancestral bloodline, it might have died in the first-circle realm for the rest of its life.

Now that he had the blood fungus, Levi only needed to get the other ingredients and formulas and he would be able to let Leviathan obtain the bloodline inheritance of his ancestors, giving Leviathan the potential to evolve.

At the same time, this gave Levi some inspiration. He seemed to be able to use some high-level bloodline as the raw material by refining similar potions.

Then, he would let those knights who could not advance because of the maximum of their breathing technique take it.

This might be able to break through the level limitation of the breathing technique.

The proficiency panel could be forcefully broken through by consuming other breathing techniques as raw materials, but other knights did not have such a way.

Therefore, if he wanted to advance steadily, he definitely needed a complete system and method.

Levi was trying to create a path for the other knights.

Knights didn't just exist as supporting characters in legendary stories. They could also be the main characters!

If Levi could develop this potion, he planned to name it "Blood Limit Potion".

For example, if the Black Knights and the Blood Knights could use the Blood Limit Potion refined by Schinn's bloodline, they should be able to break through the legendary barrier faster.

Of course, according to the experience Levi had taught them, they might be able to break through the shackles of legendary, but it would take a long time.

After all, Levi's experience was mainly obtained because of the proficiency panel. Many of them knew but did not know the reason.

Levi must have thought of the fastest way to break through the shackles of legendary.

In the laboratory, Levi's experiment was carried out in an orderly manner.

As long as the bloodline could be successfully transplanted, this was the first step.

Not long after, the little mouse that Levi had transplanted the Black Flame Demonic Bird's bloodline into fell asleep.

Among those powerful breathing techniques, there were not many fur-type animals. Many of them were mainly scales and feathers.

As for the powerful breathing technique among the scales, the Dragon Clan occupied half of it.

Therefore, a bloodline transplant did not necessarily require a similar transplant.

"Next, let's see if the bloodline transplant can succeed. If possible, I'll use the three brothers to try.

"I won't try this with Algerta for the time being. She's a little special. She's born with the Silver Frost Wolf Bloodline. From the looks of it, she still has a lot of room for growth."

Levi left the laboratory and looked at the fur clansmen who were training hard in the training room.

Tiga versus Simba, Vada, and Algerta.

Tiga, who had once relied on his powerful strength to fight three people alone, was now feeling powerless against the increasingly powerful Algerta.

Algerta's talent in the Sword Dao was the best among the fur clan.

Not long ago, she had already grasped the power of Advanced Vibration. She could be considered a genius.

Of course, this speed was still inferior to Levi, who had the proficiency panel.

After giving them some pointers on the mistakes in their sword moves, Levi left the wizard tower.

He went to the Tower of Merit and spent all the merit points he had accumulated recently in exchange for the blueprint of the second-circle alchemical creature, the Gravedigger.

During this period of time, he had used his merit points to buy all the Luminant gold he could buy in Riptide City, but it was still far from enough for the gravedigger to refine.

He then asked someone to purchase Luminant gold everywhere in Area 6 and spent 50,000 Aether Stones.

Apart from the Poseidon Trident and Frostmourn, Levi could be said to have sold everything he had. He invested all the Luminant gold on him into the refinement of the gravedigger and finally saved up enough materials to refine the Corpse Digger.

Once it was refined, it would definitely be a great killing weapon.

It made it easier for Levi to deal with third-circle powerhouses.

However, refining a Gravedigger required a special large alchemy workshop.

Levi's wizard tower did not have such a function. In the entire Riptide City, only the Alchemy Tower had a venue to refine large alchemical creatures.

Levi rented a venue there and began his life in the Alchemy Tower, the Tower of Pharmacists, and his home.

Apart from that, Levi rarely left Riptide City.

Busy lives always passed quickly. To save his time, Levi hired some alchemy wizards to help him in the Alchemy Tower.

Unknowingly, a year had passed.

Holy Brilliance Calendar Year 1049, Month of Germinal.

The fourteenth year of the Great Expedition.

On the battlefield in the Myriad Machine Plane, Deep Blue Sage led a battle group and destroyed many enemy strongholds.

Currently, he had already established a foothold in the Myriad Machine Plane and controlled many territories. He had contacted the local garrison army and joined forces to resist the Father of Plagues who had invaded the Myriad

Machine Plane..
