

Wizard 608

Chapter 608: Earth, Fire, Wind, and Water—Four Elements Combined! Great Fusion! (6)

Levi was worried that if he continued to cultivate his Aether Meditation Art, he would one day clash with the Lord of Chaos.

After all, from the looks of it, whether it was Aether or Chaos, they were actually four elements combined.

"What am I thinking? Do I deserve to be the enemy of the Lord of Chaos?"

Levi realized that he was worrying unnecessarily.

He was still thousands of miles away from reaching that realm.

It was like an ant worrying that it would bite a dragon to death.

Levi looked at his current spell system. Putting aside the first-circle and cantrips, in the second ring, there was the defensive field, Earth Spirit Shield, the passive King Kong Rock Body, and the defense of the Golden Snake.

This piece was definitely enough.

As for attack spells, he only had the lone Five Fireballs Technique. It seemed a little monotonous and easy to counter and dodge.

Although the five fireballs were quite powerful, their attack speed was relatively slow, and they were easily countered by the Ocean Faction.

What he lacked now was spell attacks.

After all, his knight skills were mainly close combat skills.

Although he had some spell-like abilities that were born from legendary organs, to Third-Circle Wizards, among these spell-like abilities, the only one that could pose a threat to him was the Annihilation Beam.

Everything else could not keep up with Levi.

It was not that these spell-like abilities were too weak, but that Levi's breathing technique level was uneven.

The corresponding legendary organs of those low-realm breathing techniques were only so-so. They could not pose a threat to Third-Circle Wizards above their level.

Therefore, Levi still had to learn spells.

The sword control ability of the Nine Swords Asura could not be used as a normal attack method.

The advantage of the Bloodline Dharma Body was that it was extremely powerful, but its weakness was that it could not last for too long.

Apart from the Burning Faction, the second faction that Levi thought of was the Lightning Faction.

"Only lightning can shatter the darkness!"

Levi looked at the 10,000 merit points on him and arrived at the Tower of Merit.

After he made his choice, he spent 9,000 merit points to buy a second-ring spell from the Lightning School of Thought.

Thunderbird.

This second-ring spell had a Grade A attack power similar to the Five Fireball Technique.

However, the Thunderbird's attack speed was very fast. It was very difficult for the enemy to dodge it.

By casting spells, one could release a Thunderbird that quickly attacked the enemy, forming a continuous high-voltage electric shock that brought about a paralyzing effect.

In fact, the Thunderbird was not the strongest spell in the second -circle stage of the Lightning School of Thought. There was also the Lightning Flash. Its instantaneous spell attack power could actually reach a terrifying S-grade, which was equivalent to being only slightly weaker than third-circle spells.

However, the Thunderbird had one advantage. Just like the Fireball Technique, the Thunderbird had a complete advancement route.

Levi did not like the fact that the spells that he had painstakingly learned in the early stages were useless in the later stages.

Therefore, he wanted to choose this advanced spell that could inherit Proficiency Experience.

Second-circle Thunderbird, third-circle Thunder Snake, fourth-circle Thunder

Dog, fifth-circle Thunder Tiger, sixth-circle Thunder Dragon, seven-circle Thunder Beast, eighth-circle Thousand Thunder, ninth-circle All Creation Thunder, and legendary tenth-circle Thunder God!

"Sticking out a convenient point."

Moreover, the power of this series of spells was also top-notch.

After returning home, Levi began to construct the Thunderbird's spell model.

Although he did not have the Special Effect of the thunder element affinity yet, because of the dominance of the Aether, he did not cultivate the Thunderbird very slowly.

Moreover, to him, it was a certainty that the breathing technique would give birth to the thunder elemental affinity's Special Effect in the future.

Therefore, learning the spells of the Lightning School of Thought in advance was better to be prepared.

Holy Brilliance Calendar Year 1049, Month of Flowers.

Levi successfully constructed the Thunderbird spell model.

He raised his finger. As he chanted, purple lightning flickered on his fingertip.

The lightning gathered into a thunderbird about the size of a sparrow.

Boom!

The lightning shattered the void, and the Thunderbird's attack instantly reached the wall of the training room.

The crackling electric currents ran amok in the training room, and the defensive array kept flashing.

"This power is really not bad."

Levi was very satisfied.

One had to know that the current Thunderbird spell was only at the beginner level.

He was still far from perfection.

If he could cultivate the Thunderbird to its limit, he should be able to release a Thunder Eagle with a wingspan of five meters.

Coupled with Levi's Aether Dominance Special Effect, this Thunder Eagle also had an S-grade attack power. Even an ordinary Third-Circle Wizard's defensive field would not be able to last long.

Time passed quickly.

Throughout 1049, Levi was busy.

The main thing was that other than cultivation and Pharmacy, he still had to squeeze out time to go to the alchemy workshop to refine his Gravedigger.

Fortunately, his alchemy skills were already at level 5 and had reached the level of a second -circle alchemy wizard. Coupled with the alchemy wizard he hired, the refinement speed of the Gravedigger was quite fast.

Levi was very ambitious. He wanted to create a Gravedigger made of pure Luminant gold and let this alchemy monster crush all enemies.

Luminant gold was the limit of conventional alchemy materials. Levi would not need to change Gravedigger materials for a long time.

Moreover, if the Gravediggers had a new and improved version, these materials could be fused again. If the Alchemy Style and runes inside were changed to third-circle, it would be a third-circle alchemical creature.

Holy Brilliance Calendar Year 1050, Month of Beginning.

On Levi's birthday, he did not put down the refinement of the Gravedigger. He spent his 60th birthday at the alchemy workshop.

The former Little Levi should now be “Old Li”.

After a month, Levi’s Gravedigger was successfully refined.

On the day of his success, Levi sent a red packet to these alchemy wizards who worked hard without complaint.

Compared to the Corpse Digger, the Gravedigger’s size did not change much. It was even a little simplified, only three meters tall.

However, as the saying went, what was concentrated was the essence. This three-meter-tall Gravedigger was made of genuine Luminant gold.

The Alchemy Style and runes on it were also the best of the second-circle. The alchemy cannon was also the greatest power at the current stage.

In short, at the second-circle alchemical creatures stage, the Gravediggers had already reached their limit!

Looking at this alchemical creature that was filled with violent beauty and had the texture of a Pacific Rim mecha, Levi, who was too lazy to name it, directly named it:

"Tyrant II!"
