

Wizard 659

Chapter 659: Five Years, Perfection! (3)

His looks would also be greatly reduced.

A month later.

Levi took out a bottle of viscous black asphalt-like substance from the special container.

This was the poison that he had taken out from Melina's Sea Dragon earlier.

According to Melina, this poison came from a third-circle dark wizard from the Ocean School of Thought.

The Third-Circle Wizard of the Black Water Tower, the Hundred Poison Wizard, Clay.

Although Clay was from the Ocean School of Thought, he cultivated all kinds of poisonous spells. He combined these poisons with the spells of the Ocean School of Thought and created the so-called Black Water Spell.

He even used the body-refining wizard method to temper his body and cultivate the Venom Body.

The Black Water Tower was a subordinate organization of the Black Sun Steeple.

What Levi did not know was that after the Flame King Al Hidd Family was destroyed, the Black Sun Steeple sent the Black Water Tower to continue the battle on the Yellow Earth Continent.

Melina had met with an undeserved calamity and was targeted by Clay.

He looked at the poisonous substance that seemed to have a life of its own.

He had once carefully observed this venom in the mist form of his Scarlet Poison Body.

These venoms were made up of countless tiny poisonous microorganisms with vitality.

These poisonous microorganisms were equivalent to poisonous Zergs that could invade the microscopic level.

Once poisoned, if the poison could not be quickly contained and removed, it would spread quickly in the host's body.

In other words, the Six-Winged Sea Dragon had a strong physique. If an ordinary wizard did not take the antidote immediately or kill these poisonous microorganisms, they would die quickly.

"Clay's venom is not bad. It gave me some new inspiration."

Clay was very strong. Melina, who was also a third-circle cultivator, was not his match at all.

Although Melina was not a senior third-circle wizard, she was a disciple of a big family. Her trump cards and the Six-Winged Sea Dragon added to her extraordinary strength.

However, she was still chased by Clay all over the Yellow Earth Continent and could not fight back at all.

"Clay can be considered a wizard who dual cultivates body tempering and wizardry. He's considered rare among wizards. His true strength should be above average among third-circle seniors. In addition, he has also mastered two innate spells."

"There are still crouching tigers and hidden dragons in the Wizard World. Although I've killed two Third-Circle Wizards, I can't let my guard down. A powerhouse like Clay can overturn me at any time."

Levi admonished himself.

He took out a little bit of the asphalt venom. He wanted to see if he could absorb this poisonous microorganism and turn it into a part of his Scarlet Poison Body.

Levi injected a little poisonous microorganism into his body.

He constantly observed the movements of these poisonous microorganisms. Once they showed signs of breaking free from his control, he would immediately transform into the Blood Fog Body and separate these poisonous microorganisms.

As the black Silhqtanp entered T.pvi's hndv_ at the micrnqcnnic level _aberration

Monsters that looked like tadpoles with exaggerated bloody mouths swam along Levi's blood and tissues.

Levi could clearly feel that these xenomorph tadpoles were devouring his vitality and interfering with the circulation of his organs.

However, because of Levi's powerful physique and immune system, these damages were better than nothing.

However, if he allowed it to develop, there would be a day when his body would be filled with countless aberration tadpoles.

He would be consumed from the inside out by highly toxic microorganisms.

"Interesting. What a powerful poison. This is much stronger than the half-baked poison technique I cultivated myself. Clay is a force to be reckoned with," Levi commented.

His entire body turned into a ball of blood fog, the poisonous microorganisms were separated and gathered together.

These microorganisms were much fewer than when Levi injected them.

Most of them were killed by Levi's immune system.

"Unless I master the technique to control these poisonous microorganisms, there's no way to rely on the Scarlet Poison Body to forcefully fuse them." Levi could not help but shake his head after experimenting.

To a certain extent, this could be considered a long-distance battle between him and the Hundred Poison Wizard.

Looking at it now, in terms of poison techniques, Clay was still stronger.

Levi could only temporarily put away these poisonous microorganisms for future research.

Holy Brilliance Calendar Year 1065, Month of Beginning.

In a small blacksmith shop outside Mist City.

Levi worked on the forging beside the fire, sweating profusely.

He looked older than he had a few years ago, but he was still full of energy.

Melina watched all of this with interest.

"You're an interesting guy to do such hard work," Melina said.

"For me, blacksmithing is a relaxing thing," Levi said.

"Why don't you become younger?" Melina looked at Levi's old figure. Most witches liked to look beautiful, so witches were young and beautiful. Until the moment before they died, they would not show their old and decayed faces. "Men get more attractive the older they get, don't you think?" Levi laughed as she forged.

"I don't think so."

Melina shrugged. In the past few years, she and the Six-Winged Sea Dragon had almost recovered from their injuries.

She planned to leave the Yellow Earth Continent and continue searching for the ten-winged heavenly Sea Dragon king.

Although she really wanted to take revenge on the Hundred Poison Wizard, after thinking about it, she decided to forget it. She did not have the strength to do so, so she could only accept her fate..
